JIM Cassidy, Uniden product planning manager: "It's something we have been working on."

It's called Project 25 encrypted mode.

Now it's illegal to listen. But by how Uniden sees it the PRESS will clamor for access and UNIDEN will rush to the loan officer to get them their loans approved overnight.

So many agencies are going over to the 25 system that it will be sheer numbers of PRESS clamorning for access to public information doings.

Cassidy says "come to market with a digital scanner".

His point now is this: right now there are none. None made. So agencies can say it's ILLEGAL Until Uniden makes one and then two and then hundreds and then they will be "knocking at the FCC's door" and numbers will be in force and it will be PRESS-READY 24 hours a day on the new 25 system.....and it will be done

but expensive.

Helping cops catch crooks is ok using a scanner. Why the problem where you are the helper and the cops need info as to how or where to find the culprits....

Just make sure of the priority level you call in about. Drunks pissing on the lawn is not one of them. Be more
crime-intense.

Just call in and say "I heard on my friends' scanner you might be in search of .....for ..... IF that is true, then I just saw them at.....". wearing : ? ? ? ? "
running from .....to.....".

they will say "who is this?" mr anonymous.

let them make up the assignment and the rest is up to their cops in cars.

>
> > it's checkout time they are going to ask who you are even if you pay
with cash,

you just look them in their crotch and foam awhile...give
them an attitude. Be the guy in TAXI...."you want my address...I don't got
to show you no stinkin badges"...

do as I do: "Impatient Giver of Cash".
phone nmber please: I knew it went on by him....

what i used to do was carry these small cards with the
following: "You want my name?"
You pay me 100 bucks".

or just tell the nurtles: "that will be 100 bucks please".
will you be paying by cash or check?

then just hang in there and keep from laughing or choking.

hold your hand out awaiting the money or check. be sure to find out if the
checking account is active and alive...you ask them to do it for you.

attitude guy

people trash RS droids because they know not what they do.

next time bring quarters...or one dollar bills and pay for it bit by bit and
money in every pocket and some out in your car...a few blocks away....

"just a minute, i got to go feed my meter"...as he wait for you to come back
to his question: "what was that?".....

then "that will be 100 bucks now...."

etc.

play with it.

I'd have to look to find the proceedure for entering the none standard frequency in memory to scan from. Its senstivity out of band (at least in my case) was quite poor plus the fact that it wouldn't do WFM made the mod of limited use.

Ted
Ken Hamer <kenhamer@attglobal.net> wrote in message news:3AEF03FE.9FA50E78@attglobal.net...
>
> Several years ago I modified my PRO-43 to receive "continuous coverage" from 30-1000 MHZ, including the band between 512 and 806 MHz. The process involved entering some non-standard channel spacing frequencies within the factory specified ranges, then direct searching into the excluded bands.
>
> Previously I had the excluded band limits programmed (511.9950, 806.0075) into memory locations, but recently I had to unlock the receiver using the CLEAR-0 power on, thus erasing all memories. The problem is that I performed the modification so long ago, I can't remember how to enter the non-standard channel spacing mode/frequencies anymore.
>

Hey Everyone,

I just got a scanner about, oh two months ago, and I tell you I love it. The problem I have is that there seems to be nobody with a real selection of scanners so I was wondering about buying my next scanner online.

I was wondering if anyone could point me in the direction of where to buy a good scanner online from a reputable dealer that you have either heard of or bought something from. I know people sell scanners on e-bay, but I really am not interested in dealing with anyone on e-bay right now. I would rather take my risk elsewhere for now.

I was also wondering if any good places to buy scanners in the UK. Well, more specifically London. I am heading over there in a month and thought I would look maybe a big city would have some sort of radio scanner shop. Oh, well.

Thanks for any help you can provide.

P

I have dealt with AES in Cleveland Ohio USA for several purchases, including a Yaesu VR-500 all band 1000 channel scanner and a Yaesu FRG-100 Shortwave radio. They have been VERY PROMPT when dealing with my mail orders, and have been equally prompt and informative concerning my queries about the above and other products that I am interested in. A+

http://www.aesham.com/aes4.html for the Ohio USA store.

http://www.aesham.com/ for your choice of other AES stores located in Wisconsin, Florida, and Nevada.

Is there a way? Doubtfully. There are scanners
http://www.universal-radio.com/catalog/widerxvr/0050.html that have the
capability to receive that frequency (2.8 MHz for the above cited example),
but I would think it likely that the phones in the Gigahertz range use
digitally encoded signals, thereby preventing intelligible reception.

Be prepared for the "it's not legal to listen to cordless phones" posts.

Have fun.

Good quality RG-6 should work fine for normal VHF Hi band monitoring,
it really shouldn't be much problem in the lower UHF band either.

I will second that. I have dealt with AES and they are a top-notch
operation. I live in NJ, but stopped by their Milwaukee headquarters -
great place and good people. Just my opinion.

To the best of my knowledge, 2.4gig phones use spread spectrum, digital instead
of analog encoding/decoding and the digital is encrypted.
I have a receiver that goes all the way up to 2.6Ghz and down to 5Khz.
I also have a 2.4gig phone.
All I hear is an occasional pfthrhhfdhtrwh. :)

They aren't making cheaper analog 2.4ghz phones yet?
I know a few people who bought the lower-cost Kmart type 900mhz phones because they assumed they'd also be digital (like the one I had at the time), just to find that they shouldn't just assume such things...

Important Update!
I have just been notified by my hosting company that since my site gets so much traffic
they are going to raise my fee from $100 to $240 a year! This is not acceptable so I am
on a quest to find a new host. Please email me with your opinions. I need server space
of at least 25 megs and data transfer of at least 4GB per month. Hypermart is who I am
with now. I have to find something by June 1 2001 because if not, the Scanner Nuts
will be no more!

Please email me if you know of a host that I can transfer my domain name to and keep
the cost under $100 a year. It is important that the cost reflect no banner ads of the
hosting company.

> Noel.

Depends on usage. I can speak from personal experience with
the 8500 but not the 5000 or 5000+3:

Pro 8500:

o Excellent ergonomics.
o Bulletproof front end.
o Decidedly *NOT* deaf!
o Flexible settings
o Extremely flexible memories
o Tanklike physical construction
o Rock stable oscillator

Anti 8500:

o Poor filter shapes in all filters
o Relays involved in some sections may drive you
batty, depending on what ranges you are scanning.
o no sync detect

Pro 5000+3

o Apparently excellent electronics
o Can take external rubidium standard if you are
doing really exacting work.
o Better feature set than 8500
o Physically smaller than 8500

Anti 5000+3

o Appears to have standard AOR bad ergonomics
o Appears to have standard AOR bad mechanical
construction. (AOR 7030 excepted, of course)

I chose the 8500 because I wanted a rugged rig
that could take some abuse and keep on going.
I have not regretted it and have been responsible
for the purchase of about 6 of them by now.

I have read of people blowing the front ends on
their 8500s but I've not done it and one of the
ones I use is used for radio astronomy. SETI people
also like them.

My opinions only, of course...

Eric

Source record: 66183
Cross-posted to: rec.radio.scanner,alt.radio.scanner,comp.periphs.scanners,de.comp.hardware.scanner

hi there,

i am looking for a scanner (buy, rent, service) that scans dias in low resolution but mass assembly.
the scanning result should be enough for screen reviewing, not for print.

the 22000 slides are all well archived and of same format. i need a scanner (or a service (agfa?) that has a big machine), which can handle maybe 100dia slides in kind of a batch scan.

the price for each dia should be somewhere at 0,10 DEM to 0,20 DEM at max.
is there a professional service for archiving such a mass of slides?

best regards,

matthias bruner

To answer your question literally: Probably not. Weather by itself
shouldn't make much of an *IMD* problem.

You may have a defective radio. I consider this to be the most likely
scenario. In particular, if this radio is more than a few years old,
some components may have degraded to the point where they are no
longer doing what they're supposed to do. Case in point: A tantalum
capacitor. These things have a lifetime. If they degrade, you could
have unwanted coupling between stages of your receiver or between the
receiver and the computer parts of your scanner.

You may also be picking up weather inversion skip, though I consider
this possibility to be less likely. Windy conditions don't often lead
to weather inversions...

Source record: 66188

The source of your radio's intermod may be a nearby radio transmitter that has a defective antenna. On windy the antenna will blow so that it makes proper contact with it's feedline. On hot and humid days the metals in the antenna and feedline expand so that everything makes proper connection.

This would explain why you get this interference only on windy and hot and humid days.

The fact is that the interference may not be intermod, but rather something called signal splatter. If you can find the source of the strong signal, try to notify the owner of the equipment. This might not be an easy task. You might be able to file a complaint with the FCC, but this probably wouldn't solve anything either. Your best bet would be to find a commercial radio service that might also be affected this same interference. Get them to file a complaint.

Source record: 66190

What I found in several suburban locations is that when it rained, and the day after as things dried out, was that the cable TV systems would "RF Leak" very severely. Compare the noise on the radio with the audio of each of your cable TV channels to see if that's not the true culprit with your noise problems.

If it is - you can try reporting the problem to your local cable company, good luck. It took me several tries before I convinced them I wasn't just a nut (they are easily deceived ;-)). Then I ended up having to pay a 110 dollar service visit call.

Eventually I got a guy to come out. He had a rather nifty handheld, digital, spectrum analyzer. He did find a couple of leaky connections in my own equipment and replaced those. It didn't cure the problem, but the next week, after it rained, they sent out a van with a more elaborate set up. Low and behold they found a leaking cable head, replaced it, and no more noise.

Wind, heat and humidity can also cause problems with already shoddy cable tv splices, cable heads, etc. Leads me to suspect cable tv noise (broadband RF leakage from their system), and not true "intermod" might be your local problem.

On a side note, we had similar problems when we bought our house, but this time it was screwed up telephone service. Even had an AM broadcast station coming in on the phone lines at one point. A few service calls later they found a bad connection up on a pole - no more problems now.

Let us know what you find...Happy Scanning! - Ted Moran / CARMA

Hi,
I have a Radio Shack Pro-2036, the same as the Uniden BC-890. I bought my scanner used with no owners manual. If you have yours, could you please look in the specifications section of your manual and see what the IF Frequencies are.
Thanks
kc0ewq@yahoo.com

I've had both, and if you need PL tone capabilties, the R-2 is the way
to go.

Shame on Yaesu for not putting that in the VR-120.

The alpha tags are a nice plus on the VR-120.

I think the R-2 is a better overal performer for it's size, despite
some minor design flaws.

From what I hear, you might get your wish! Bush seems to be trying very hard to give some of our tax money back!

Regarding the reception of digital transmissions, I never understood why this was defined as illegal. If it's not encrypted, it should not be illegal to receive.

I am tired of all the wall warts and want to power my radios with a DC power supply my question is how many amps is enough? What I want to power is the following (AOR 8000, BC 780xlt, RadioShack DX-398, two Cobra CB radio's {one base, one portable}), but I want some room for future expansion.

Sorry for the newbie question, but I am a newbie :)

3166. FS: BC895xlt Trunktracking Scanner

Newsgroup: rec.radio.scanner
Date: 2001-05-04 01:30:35 UTC
From: cocquit@aol.com
Message-ID: <20010503213035.24006.00000657@ng-ch1.aol.com>
Source record: 66100

I have for sale a Uniden Bearcat BC895XLT Trunktracker scanner. It's only been used 1 day. I paid $220.00 for it and will sell for the same price or best offer.

Let me explain my reason for selling it:

After programming my scanner it wouldn't detect any trunk systems for the police departments and such in my area. Asking around what the problem could be, I found out that the area police departments aren't on the Motorola trunk system, and I didn't realize that that's the only trunking system the BC895XLT will trunk correctly. Therefore, I'm wanting to sell this scanner and upgrade to the BC780XLT which does trunk the systems in my area. That's the only reason I'm selling it. Otherwise, the scanner is in perfect working condition.

Again, this scanner has only been used 1 day. It includes the AC adapter, and all manuals that came with the scanner. I'll even pay for the shipping to get it off my hands. Again I'm asking $220 for it or best offer.

I'm located in Illinois.

If you're interested in this scanner email me and we can go from there.

My email address is Cocquit@aol.com

OK, I have said this before but it does not seem to be sinking in so I will try again...listen carefully...

IT IS NOT THE FACT THAT A TRANSMISSION IS MADE USING A DIGITAL MODE THAT MAKES MONITORING IT ILLEGAL. DIGITAL TRANSMISSION AND ENCRYPTION ARE NOT THE SAME THING!!! OK????

Uniden is developing an APCO-25 compliant scanner. Check out Monitoring Times.

>any way?
>
>
\ Yes, weather can play a part. Intermod can be caused by two or more
signals mixing together, the result being an output on your frequency.
These mixes can take place almost anywhere there is metal to metal contact
that can produce a diode mixer type action. Bad antennas, transmitter
output circuits, receiver front end problems, and cables are a frequent
cause, but other nearby object can also be the cause such as rusty tower
hardware and even chain link fences. Wind can exacerbate the problem, and
moisture tends to eliminate such mixes temporarily.

wind can always make & break cold or broken solder joints that are outside, causing unknown reactions. Dryer conditions cause poorer grounding.

3179. Where can I buy a UHF scanner in Vancouver, BC?

Newsgroup: rec.radio.scanner
Date: 2001-05-04 07:50:44 UTC
From: Ken Hamer <kenhamer@attglobal.net>
Message-ID: <3AF25F54.F68B94C8@attglobal.net>
Source record: 66113

I've been looking for a scanner that can receive in the 560-670 MHz range, but the industry seems to have taken a dramatic change over the last few years (at least in Vancouver.) The last time I looked at scanner in Radio Shack, perhaps 3-4 years ago, they had dozens of models in the store and even more in the catalogue. But now they typically have one or two in the store, and perhaps one or two more that the *might* be able to order in, deposit required of course. None meet my needs.

I've checked the two communiations/ham stores in town that typically carry this kind of equipment, and decided I need an Icom IC-R2, which I'd buy tomorrow if they had any in stock. My only other option is to purchase either an R10 ($700) or an R3 ($900.) Given that the R2 can be had for about $350 and perfectly meets my needs I loathe to spend twice that just to get a scanner before the end of May, or later. (The stores I checked were Burnaby Radio and Com-West. Even Com-West seems to be a much smaller concern than I remember it to be.)

I'd be most grateful for any suggestions as to where I might purchase a scanner (again that covers 560-670 MHz, FM) somewhere even *close* to Vancouver, before May 17th. At this point, I'd even consider a pawn shop, not that they're likely to have a scanner of this type.

Thanks in advance...

The digital scanner that Uniden is making will only convert decryted PROJECT
25 Digital signals. How do you know if a system is digitally encrypted or
not?

Y'all need to get off the computer and look around. 780s are starting to
trickle down to the used market now. If someone needs quick cash, the prices
are low.

Earlier this week, I just purchased a like-new 780 with all original
accessories for $150. Also found a 245 with all of it's original accessories
for $75.

Look around. They're out there.

Source record: 66127

You also do not want to plug the adapter into the scanner and then power it up with a power strip while the scanner is operating, as it will clear the units memory if you do. At least it did on my BC235 XLT. 195 frequencies gone in a flash! I have used this radio for 2 years almost daily both while on batteries alone and also while charging with no problems so far.

If you're willing to go out of province in the first place, then instead
of Radioworld (which, I'm sorry to say, has a lousy reputation amongst
hobbyists in Ontario), I'd try Durham Radio instead. They are friendly
and helpful, answer questions by email etc. That is my experience,
anyway. YMMV

The radio may be one of the more complicated scanners to program, but the manual does explain the process fairly well and includes examples. If the manual method is just too much, I suggest you buy the programming cable and one of the aftermarket programs which program the unit via PC.

3197. NEW CE-232 Interface kit for sale

I have 1 NEW CE-232 Interface kit for sale.

I had several Pro-2006's, only did one, kept this for later, not interested anymore.

NEW in static bag, $200.

PayPal or Yahoo Pay Direct

3198. FS: 2 (TWO) Radio Shack PRO-2006's, both w/mods

Newsgroup: rec.radio.scanner
Date: 2001-05-05 01:04:43 UTC
From: WareMonger <WareMonger@msn.com>
Message-ID: <LkII6.157025$fs3.25668960@typhoon.tampabay.rr.com>
Source record: 66132

OK, time to sell.

2 (TWO) perfect Radio Shack PRO-2006's, each a little different from the other.

1 is modified with the Opto 456 board (not the lite, full)

1 is modified with the CE-232 interface AND a DDI interface

Both have original boxes no antennas or manuals.

I'd like to get $550 for each, $1000 for both.

I'm in the Clearwater/Tampa Florida area, for quick deal, or PayPal or Yahoo Pay Direct is accepted.

No lower deals. I'll leave here for a few days before I post on e-Bay, if no interest is shown.

Hi there
I have just received my delivery of the following BRAND NEW and UNBLOCKED
scanners at the very best prices

Alinco DJ-X2000
AOR AR-8200BMKII
Yupiteru MVT-9000MKII
Yupiteru MVT-7100
Bearcat UBC-9000XLT

I have these available from stock and ready for immediate delivery, .
All of the brand new receivers come with the full 12 month warranty.
and We do accept credit cards

The Alinco is the E version which is unblocked and has the speech inverter
as well as the drop in charger however the micro transmitter is not
available in the unblocked version.

Please feel free to check out our web site at http://www.radiomartinc.com
for further details or e-mail us direct at sales@radiomartinc.com

I thank you for looking at this posting and hope that I am able to assist
you in your next purchase or if you need any advise regarding your selection
we would be more than happy to assist.

Best Regards and happy listening
Martin

i think also it's uniden's way of getting you to wear down your battery pak and having to buy another one very soon. luckily there are third party companies that can rebuild them with better NiMH cells!

Uniden sure sucks in this respect. Heck, just let us use regular AAs, jeeze...

3207. Choosing the right type of connectors ?

Newsgroup: rec.radio.scanner
Date: 2001-05-05 04:29:54 UTC
From: empathy <nospam@newsranger.com>
Message-ID: <6lLI6.2004$vg1.162802@www.newsranger.com>
Source record: 66141

I've heard that using the wrong type of connectors may effect the antenna high frequency reception such as reception above 800 Mhz. So what are the right type of connectors should I use ? Right now my Diamond D-130J antenna and my scanner are using the PL-259/SO-239 connectors (coax : LMR-400). I don't think this is the right type of good connectors to be use for good 800 Mhz and above reception.

Thank You all for the info.

empathy.

3208. Re: scanner to scan 22000 dia slides

Newsgroup: rec.radio.scanner

I saw a Movie once entitled Scanners.
http://us.imdb.com/Title?0081455

This probably has more relevance to this newsgroup than the following post
since I think I remember seeing a radio in the movie.

> Should i get an AOR 5000 instead?

IMHO I would suggest that you go for an AOR 5000. I am actually operating an IC-R7100, IC-R8500 and two AR 5000.

If you love to have robust mechanics go for ICOM. They are really high quality in this field.

If you need outstanding technical specs/performance you have to go for the AR 5000.

If I would have to compare all three mentioned receivers at the same antenna I have to admit that the ICOM gears are really deaf compared against the AOR (tested at large discone antennas and Diamond 707 active antenna, Dressler ARA 2000 active antenna).

Regards
Howard

I would bet there "HOT" to touch..... Take a walk around any flee market, you can find about anything your looking for.

I know a flee market where some people are selling hand guns, no papers - cash and carry.

Using a tri-band vertical, 4 element quad and a log periodic. All worked just fine. You really don't need much to hear them. Being on the West Coast I'll try and to catch them when they are over the Pacific and there is less stateside QRM. It worked well for MIR contacts

They don't have a schedule but they are known to be active at this time of day.

3217. Re: Choosing the right type of connectors ?

Newsgroup: rec.radio.scanner
Date: 2001-05-05 15:07:37 UTC
From: Walt Bertram <wbertram@worldnet.att.net>
Message-ID: <3AF41737.810B5352@worldnet.att.net>
Source record: 66051

The PL-259/SO-239 connectors are good well above 800 MHz, and are used in professional equipment up through the 10 GHz range. They are preferred because they work with the bigger diameter, lower loss coax cables. If the receiver has an SO-239 antenna connector, the PL-259 on the large diameter coax can be plugged right in. More likely, the receiver will have a BNC connector, and an adapter will be required. Optionally, a short piece of more flexible (and higher loss) cable can be used here between the receivers BNC connector and the BNC/PL-259 adapter.

Problems can arise when long lengths of non-59 ohm cable (such as RG-6) are used with a 50 ohm antenna and a 50 ohm receiver. But, these are more severe in a transmitting rather than receiving, antenna setup.

I have the habbit of always doing that. Never had a problem. Most uniden radios have A diode or 2 or more inside right where the adapter pligs in. It is probably a simple blown diode. Even thought it may charge the battery. it could still be that. If you have checked the AC adapter and it was fine. I would look for a diode blown. or even a resistor. Just make sure you have no static charge in your body and look for that. A simple VOM meter could work since it sounds minor. But never know it could be major. Look around the power jacks.

If you are gonna try to run RG-6, why not get the proper 50 Ohms stuff. even rg-8 works. Atleast that is 50 Ohms and is usually cheaper then RG-6 at 70 Ohms.

well both of those are Ham radio frequencies. 2 meters from 144-148 and 70 Centimeters from 430 - 450. If you received it on one of those ham frequencies. A ham May of installed his own alert system or something. if yousearch comercial frequencies. you may find it.

All depends on the frequency you are listening too. We have had very strange propagation here on VHF abovew 50 mhz Due to weather. It has been very strange and the recent solar cycle has been doing strange things too. But this is in canada though. You would notice HF more then anything be affected by weather.

I am in BC too. and what were you planning to listen to. Radio world has shitty reputation Because they are rude. But if you have dealt with them buy buying products that you want. then they are good. no questions needing to be asked or anything. I bought my pcr-100 there. and it was the cheapest in canada. receives from .01 Khz to 1300Mhz with no splits. have a external BFO for sideband.

Hello
I have for sale an excellent condition Yaesu VR-500. It is 8 weeks old,
boxed with batteries, antenna and manual, Plus lead and cloning software
AMDS-3. This is unblocked and has continuous coverage from 100kHz to 1300MHz
with no gaps and all modes. for specs etc visit
http://www.strongsignals.net/htm/revvr500.htm

I am asking £140.00p uk, this includes shipping & Insurance by air-mail
worldwide, in US dollars that would be $187.10...and Canadian Dollars
$287.20p
I'm sorry I do not have the facilities to accept paypal. I can accept
IMO or Cash/registered delivery.

I have the above radio for sale. it is in excellent condition, I am a
non-smoker,
and bought this set new myself around 1990/1991. I had the internal HF
converter by Raycom fitted. It has AM/FM/WFM/CW/USB/LSB and also the
computer control interface.Scancat Gold. To view the radio, go to
http://www.rigpix.com/yaesu/frg9600.htm
I am asking ?250.00p UK including shipping and Insurance by Airmail express.
thats $359.80 American Dollars and $552.30 Canadian.
I would also, in fact, prefer to do a swap on a good handheld or base
scanner (cellular not important) but must be good specs and in good
condition.
(yupi- 9000 or bc-9000xlt or very similar.

PL259 connectors are NOT recomended above 400 MHz. N connectors are used above 400 MHz. If you ever have to terminate to a commercial antenna above 400 MHz, you'll need the N connector.
Jim in Pittsburgh

I've always had great results with using an antenna made by Antenna
Specialists model MONR31. It's rated 25-1000 MHz and it's a gain-type
antenna and will accept connection onto it's SO-239 connector (UHF
type). Better performance than a discone-type antenna. The down side
is that it's a receive only antenna and you can't transmit on it like
you can with the discone antennas. You'll need coax retrofitted with a
male UHF (PL-259) connector. The radials and radiator elements are
fairly long so you'll need to mount it on a least a 10' mast. This
model lists for around $130 US dollars and many retail outlets
discount this antenna. Since Antenna Specialists is mainly in the
business of commercial antennas, I find the components are of
commercial quality and parts availability is great. Good Luck!

3236. Help for Bigear Type-1 or FDK multi 1000

It is generally accepted that N connectors have better specifications
than PL259/SO239 connectors. But, N connectors were not the issue
here.

And, there are very few non-commercial equipments available with N
connectors.

You mean all those X-band Waveguide to Coax adapters with UHF
connectors are not recommended?

Walt

Don't know any keypad tricks, but the interface is covered at:

www.clark.net/~kplotkin/scanner.htm

I recommend wload64. The help file for that contains a nice schematic
for the interface cable. I recommend *not* including the resistor.

If you're looking for mods, the Excel package has a description of the
battery pack mod.

3249. FS: Motorola Radios and Accessories

Newsgroup: rec.radio.scanner
Date: 2001-05-06 03:33:10 UTC
From: jayg359@aol.comNOSPAM
Message-ID: <20010505233310.25859.00004044@ng-mq1.aol.com>
Source record: 66082

Hello. I have the following radios and equipment for sale. Prices are listed, but serious offers considered! I NEED CASH!! Please email me directly.

4-Motorola speaker/mics HT 1000 $ 50 ea

13-MOTOROLA HT1000 16 CHANNEL RADIOS UHF $ 325.00 ea
(please note: These were all taken as a trade-in - Some are 2 ch converted to 16 channels. First buyers get real 16 ch radios.)

8-MOTOROLA SPARE BATTERIES HT1000 $ 20.00 ea

1-MOTOROLA GP300/P110 6 GANG RAPID CHARGER NEW $ 250.00

2-MOTOROLA P10 1 CHANNEL VHF RADIOS W/CHARGERS BUT NO POWER SUPPLIES
$ 150.00

1-MOTOROLA 6-GANG P200 RAPID CHARGER $ 250.00

4-MOTOROLA P200 RADIOS UHF W/SPEAKER MICS $ 200 ea

3 - MOTOROLA P200 RADIOS VHF (No batterys) $ 125 ea

2 - MOTOROLA GP350 VHF 16 CHANNEL $ 300 ea

1 - MOTOROLA GP350 SPEAKER MIC $ 40.00

1 - MOTOROLA GM300 UHF 16 CHANNEL 40 WATT $ 275.00
This radio has a minor problem - I believe it needs a good tuning, but dont know enough to guarantee anything - No Mic or 16 pin connector. Radio only.

All equipment has been tested and is in good working order, but as with all electronics, is sold AS-IS! Paypal accepted and suggested, but will take USPS money orders.

Thanks for looking!

Not generally, unless it is a murderer running round the neighborhood. If
you ID the wrong person the people can sue you and I am sure you enjoy your
home that you worked hard to buy.

>I've heard that it's illegal to use the info, but they don't mean for ANY
>purpose, do they?...

It is illegal to use the information heard over a scanner for profit reasons.
Anything you hear on GOVERNMENT communication frequencies that is not
scrambled or encrypted you can freely discuss, tape and replay. Of course,
you have to be careful here because any embarrassing or identifying
information you reveal can be used in civil court to clean out your bank
account and take your home. This does not hold true for private party
communications, except in a emergency. Cellular and cordless phone
communications are completely illegal to listen to. So
if a neighbors cell phone overloads your scanner and a woman is screaming for
help during a rape and murder do not report it to the police or you will
be sentenced to 10 years in prison.

> I recently acquired a BC890XLT w/o the manual. I have two
> questions.

> How does the CTCSS button work

you can only use it if you have the optional CTCSS tone board installed in the bottom. the key enables CTCSS operation and allows you to program channels to receive CTCSS tones (squelch i sopened only when a CTCSS tone is received. i can give you specific details of operation from the manual if you want more info...

> and what is the AUX port on the rear for?

it's an rca jack. you could take the output from it to your stereo etc. it's only 'live' when you have 'line' toggled on a channel (by pressing the 'aux' button.

i bought an 890xlt when they first came out, mainly for the auto program...and because it uses double conversion, any frequency i 'find' with it, i plug into my pro-2006 (triple conversion) to verify it...

<lenny-t@worldnet.att.net> wrote:

>Can anybody tell me the specs for the internal and external batteries in
>the ICOM R1? Voltage? Current rating?
>
>Thanks!

Internal pack is made from fractional length AA NiCds. They are 1.1"
long - 60% of full length AA cell - 6 of them soldered together rated
7.2v, 300 mAh.

Several 7.2 Volt external packs are made, some with soldered inserts
rated up to 2700mAh, some holding regular flashlight cells. The one I
have holds 6 AA flashlight cells cells, NiCd or metal hydride.

See http://www.mrnicd-ehyostco.com in the ham radio and battery
inserts sections for some examples.

Current drain for the R-1 at maximum audio output is rated at less
then 300 mA. Drain in power saver mode is claimed to average 15mA.

One simple way to hack the bandwidth down would be to tighten up the images on your site. You can batchprocess them overnite and upload _en masse_ and replace the older, bigger ones. Wouldn't require any rewrites or moving about. Simple.

Here's a random example:
http://www.webdeals.net/scanpix/bc3electra.jpg 56K
http://www.mousetrap.net/~mouse/temp/bc3electra.jpg 30K

In this case, it was run through a Photoshop "export for web" tool, but Jpeg Wizard or dozens of other apps could do the same thing.

Here's another random choice:
http://www.webdeals.net/scanpix/pro20.jpg 49k
http://www.mousetrap.net/~mouse/temp/pro20.jpg 16k

and so on.

I bought my Icom 8500 this week, its great. I also have Icom R75 also great.
The AOR is apparently a 'bitch' to operate, this was the deciding factor.

Hmm, I can't complain about the operating features of the AOR. If you get used to the operating layout of the keybord it is imho not easier or harder to operate compared to the ICOM RX. But this is a thing everybody has to deceide for himself.

Regards
Howard

The following information was recently posted at the Openness.org website. The site is an advocate stage for the advancement and preservation of open public safety communication systems. If you are concerned about losing access to public safety communications in your community, make yourself a part of this campaign today. Newstips, links, and other information may all be sent to tips@openness.org:

DID CAMERA-WIELDING HOUSING PROJECT TENANT REALLY NEED TO STEP BACK?
http://www.sptimes.com/News/050601/Hillsborough/Woman_fights_one_stri.shtml

In Tampa Florida self-assumed guerrilla journalist Arlene Burke began taking pictures of a neighborhood arrest. Police confronted Burke, urging her to 'step back'. According to the report Burke did not immediately comply and was subsequently pushed back. In grave turn, Burk hit an officer on the arm, which resulted in her arrest. Versions of the actual story are varied.

The woman, who jail records indicate is no stranger to the local pokey on similar charges of assault, is now facing immediate eviction from her public housing complex as part of a tough one-strike policy that includes a tenant merely getting arrested grounds for eviction.

Judging by her record, Burke probably did hit the officer as reported. If so, I have no problem with the consequences she is facing. What bugs me is whether or not this particular confrontation was really necessary, and whether, as Burke herself charges, the fact that she was taking photos factored into police approaching her in the first place. Burke asserts that she was 'ordered to stop taking photos' by police on the scene and when she didn't, well, the rest is history.

Whatever trouble Arlene Burke may have been, or planned to be in the future, she was at that moment a mere journalist. A journalist acting dutifully and even courageously (apparently) to document a mundane arrest that a profit-seeking media organization wouldn't waste an intern on. The neighborhood Burke lives in is for all intent and purposes considered public welfare, an unpopular concentration politically and ideologically in today's America. With too few pictures and stories coming out of such neighborhoods, one could call Burke an enduring soldier of witness for whom the world, as outrageous as it might seem, depends on for such stories in that very specific region on planet Earth. Would a reporter from local WFLA television have been told to 'stop videotaping'?

As police systems go closed and laws that prohibit videotaping or documenting police at work by non-accredited media agents magnify, you can expect more stories like these to leak out. It's a shame, and it doesn't have to happen.

ARTICLE ON UPCOMING DIGITAL SCANNER SPECULATES ON OPENNESS WAR
http://www.telecomclick.com/magnewsarticle.asp?newsarticleid=198391&siteid=3&magazineid=2

A revelation this week that Uniden is working on an APCO-25 digital radio scanner has scannists hopping with joy. To put an Openness.org spin on the matter, consider what this article has to say about the bar of adversary between media and public safety reaching new heights as a result. As I speculated a year ago in usenet with this posting, digital scanners will prompt hostile public safety to begin encrypting their signals. Since it is illegal to decrypt such signals (minding that digital transmissions alone are not encrypted which is why someone can manufacture a scanner to monitor them), an "underworld" of radio scannists will grow and flourish. While scannists go underground, this article predicts that media interests will approach the FCC to force public safety to keep open. Little does this article seem to acknowledge that that "battle" is getting a head start at this very website! Power to the web people. :)

SPJ CHAPTER CHALLENGES ENCRYPTED CLERMONT POLICE RADIO
http://cincinnati-spj.org/clermont_letter.html

The Cincinnati Chapter of the Society of Professional Journalists moves to challenge police department's closed radio system. This is a direct link to their letter on the matter. This is a very important statement since it demonstrates an increasing awareness among professional journalists that once the "freelance" journalists are clamped, they may be next. I hope that more classical media organizations will have the foresight to join the outrage ventured by the SPJ.

UNITED STATES SECRET SERVICE FAILS TO INVESTIGATE MANIACAL REP.
http://www.wfla.com/MGAQGWQ1NLC.html

Days after telling a dumbfounded congregation of school children that some of them would burn in eternal fiery damnation, the United States Secret Service has failed to investigate Florida Representative Allen Trovillion.

Trovillion, apparently satisfied and upbeat about the prospects of His God doling out torturous punishment against people different than he, has so far escaped the brow of official scrutiny. Although clearly demonstrating a dangerous and simmering anger against a self-regarded subclass of human beings, Trovillion has apparently lived the days since his terrifying diatribe without any inquisition whatsoever. He has not been officially approached and prompted by the Secret Service to disclose any history of mental illness, or to ask of his potential affiliation to terrorist organizations. He has not been "persuaded" to sign papers which would allow agents to examine his medical records,

nor has his residence been searched for weapons or other signs of deviant criminality.

Folks, we live in a sick world. :)

I am not sure what the article is referring to as "frequency hopping". When I hear that term, I associate it with Spread Spectrum. If that is what they are referring to, you will not be able to hear anything with a scanner.

Some people may consider a trunking system as "frequency hopping". In which case, there are scanners which will pick up some of the trunking systems.

According to Amphenol and other sources, PL-259 is good up to 300 Mhz only. If this is really true then why antenna/scanners engineers from Diamond, Icom, Yaesu etc put PL-259's (SO-239) on their equipments.Can't say that these engineers are not knowledgeable.

Choosing the right kind of connector is very important to me because I do a lot of monitoring on the 420-470 Mhz and 800-1000 Mhz. I really hope someone can throw some lights on this.

empathy.

A lot of cordless-phones, with answering-machines built in, will say "Digital" on the box somewhere.. and people will just assume that it refers to the phone-transmission type when it actually means to the answering-machine... Take a closer look at the cheaper ones the next time you browse 'em.. ;)

hi Chris
whilst serving in the army we trialled a new radio that was a frequency
hopper
you programmed a code and it would then change freqs as you txed
it sent a code on key up and that programmed the rxing radio so that it
could follow the txer
it would do about 30+ freq changes a second so I think that you will have
trouble following that with a scanner
hope this helps

globalcabl@aol.com says...
> Will the Icom R9000 show a television picture on it's display screen?
>

Yes, actually it can, but it requires (if I remember correctly) a special cable to take the video out of one of the aux jacks to the video input for the monitor. It's a black and white, or more correctly amber and white picture, so it's not real hi-fi, but it does do the trick if you just want to watch news or something like that.

You can also feed an external monitor with that same jack.

3293. What's that noise

Newsgroup: rec.radio.scanner
Date: 2001-05-07 01:26:40 UTC
From: Kevin Gallagher <Kevinga@ix.netcom.com>
Message-ID: <3AF5F9D0.DCC34431@ix.netcom.com>
Source record: 66025

My Uniden scanners (BC 895 XTL and in the car BCT 7) pick up a horrible noise. My other scanners (Radio Shacks. ICOMs and Yeasu VR-500) do not pick up the noise. Even when sharing the same antenna system.

I live in south San Jose, Calif. This is on the San Jose Police frequencies between 460.025 - 460.525.

The noise last about 3 seconds and is about a medium pitch. Sounds like perhaps a pager signal. It overrides the transmission and is loud and annoying. These scanners have a "No Data" setting but it doesn't help.

Any ideas on how to eliminate this?

Why just the Unidens? Even the Radio Shack scanners don't do it.

Kevin

From: Skweezieweezie <noway@thistime.now>
Message-ID: <KMpJ6.10106$A5.482643@news1.epix.net>
Source record: 66036

RG-6 usually IS the cheaper stuff..... When looking
at coax for reception only, you should go with the one
that has LOWER loss, not necessarily the same impedance.
You will not have an exact 50 ohm match throughout the freq.
response of your scanner, so perfectly matching impedance
w/50ohm cable is pointless.......

it is a green sorta square capacitor. if it is the 2level or hamcomm interface. If you are taking about the one that the discriminator connects to. then that is the one I am talking about. Don't use the 741 IC though. it sucks. I use a TL072CN IC. as long as it is a TL072 and so on it will work. The only cap I can think of is if I remember says 2A104K. I just took the one I built apart. To my knowledge it is a .01 uF. microfarad capacitor. if I am wrong then that is definately a 104k Cap. I have built too many of em to remember cause breaking them or make it packet ready rxer. etc.

Source record: 66037

Don't take ANYTHING to RS to repair!! The techs work
on a commission basis (per piece!) Get the service manual
and do it yourself! It really isn't that hard if you are careful
about making sure you remember where everything goes
when it goes back together. The '43 does NOT require a
complete disassembly. The AF and RF boards can
be left intact and will come off in one piece. Once these
are removed, all you need to do is take out the screws
holding the CPU board to the front case and you're home
free! Nothing needs to be de-soldered even!

now I forget if it was .01 uf or .1 uf. If you are talking about the one for the discriminator audio input. it is either RS part #

272-1065 for the .01 uf
272-1069 for the .1 uf

there is 2 to a package. if in doubt whick one. those are the markings on my capacitor on the previos post. I forgot how to read capacitors tonight. but no matter. those are either of the two and the original Cap that is being used at this moment on prev post, good luck

Dev. if I find my schematic I will paste it for you.

Well, I think I can say that everybody who is seriously interested in "scanning/listening" should go for a receiver which has the best receiving performance and technical specifications. And despite the fact that the AOR AR5000 list of things I do not like is long this receiver is still the top end of available hobby receivers. Everything better regarding performance comes from the professional sector (e.g. Rhode&Schwarz) and is much more expensive.

In my shack I simply use the specific receivers for specific tasks. The AR5000 is used as a multipurpose receiver mainly for checking out new frequencies (in combination with SDU 5500). The ICOMS are used for monitoring and/or decoding specific frequencies (HAM, ISS, etc.).

Regards
Howard

To the best of my knowledge there is no way to do this as they use digital signals, at least the Uniden one that I have does.

It will Pick up 2 way radios, police, Aircraft, Fire, Cell phones, Cordless Phones, TV stations, just about anything.

Its range is from 29MHz - 956MHz

This is a well kept scanner in Excellent Condition and works perfectly, It was mainly used when

I was in aviation school 1993-5 and kept in the included soft case.

This scanner will do the *Test Mode* holding L/OUT, 2, and 9 at the same time at power on to allow

for "Full Spectrum" of frequencies.

I cannot help you with the test mode since I don't use that, but it does do it, you could

look this up on the internet If you were curious.

The date code is * 6A3 * or June 1993 a Good year no doubt.

It was stored in the Box and comes with the Whip Antenna, unused Belt Clip, and AA Holder Battery Pack.

It comes with the everything as if it were new packed in the box with manual and even the receipt from 1993.

It comes with a few extras like the optional Archer Power Supply and Carry Case.

Check the Tandy Page for more information.

Shipping will Be $10.00 UPS insured in addition to bid Price in continental US.

I accept Palpal and Money Orders (US Dollars) only.

Sold as-is but is in excellent working order will not be DOA. Contact must be made within 24hrs from end of auction with address and payment method. Payment must be made within 10 days or item will be relisted. I reserve the right to reject bidders with too many negative comments.

Thanks for looking and Good Luck Bidding!

Yes, and I noticed plenty of degradation on the pictures. Look around the words on the scanners. I use Paint Shop Pro & CompuPic and have been for many years. The scanner pictures are the biggest draw to the site and some of the pictures already look like crap as small as they are. I will not take anymore away from them just to "get by". While my site is not even close to perfect, I want it to look the best it can. Thanks for your thoughts though.

I found a hosting company (Powweb.com) that will give me 70 MB of Web server and Unlimited traffic for just $7.77 a month. The provider I'm with now (Hypermart.net) charges more than that for half the service. So after the move, I will have more space to grow, a faster backbone to the Internet and even save a few bucks.

The Scanner Nuts! ☺

For Sale:

Electra Bearcat III
8-Channel Scanner [crystal controlled]
Excellent, Near-Mint condition. No Scratches or dents, VERY clean face,
almost no wear at all showing. Comes with original telescoping antenna.
Works perfectly, sounds great.
Serial Number is 3-176573
Has the following freq. boards installed: 30-50MHz and 150-174Mhz
Has the following crystals installed: 39.30, 39.50, 39.60, 49.49, 153.755,
154.98, 155.88. (one crystal is missing, only seven crystals included).

This is an awesome unit, and a great piece of history. I hate to get
rid of it, but I am a starving college student. :-)

Price is $45.00, and this includes shipping via priority mail in the USA.
If interested, email Todd Atkins at: bcsw@home.com

3332. Anyone using Stridsberg MCA804 Multicoupler?

Newsgroup: rec.radio.scanner
Date: 2001-05-07 20:38:08 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <9d7132$9qh@news.or.intel.com>
Source record: 65963

I've alerady got a few Stridsberg MCA204 multicouplers which I am very happy with, but I've been thinking about getting the 800MHz model. I'm wondering if anyone is using one of these and how it is working for them. My main reservation is that the 18dB of gain per port might be too much for many scanners to handle (especially Uniden models). I'd like to hear what antennas and scanners people are using with this multicoupler.

Thanks,
Brett - N7OLQ

All depends what you want to believe BD. but it IS illegal to divulge any transmission heard to another party without the original parties that were transmitting agreed. encrypted, un encrypted, digital, non digital. it don't matter. but I do know some police stations accept the scanner/ham listeners advantage in finding a crook. i even heard them thank the scanner listeners. Keith is warped if he says it is legal to repeat what you heard on a private transmission. even though whe two or more talk on a radio, we know it isn't private. but still called a private transmission.

Dev

my mistake on the .01 uf. it is the .1 uf capacitor. but is green and I got that part # off of rad shack site last night. any electronic store will forsurely have that capacitor, it is very common. even lots of equipment that is broke has that specific capacitor. Don't tell radio shack what you want it for though. Even if it IS for ham use or whatever it is used for. they treat you different afterwards. um. I know a few radio repair shops have that specific cap too. after building it. get a program called slicer.exe. it will tell you if it is working or not. all you need is static even. or packet data.

First of all, the thread is ancient history in terms of Usenet; get over it. ;) Secondly, don't send me anymore email to my personal box. If you don't know how to operate your browser so that you post only to Usenet and not to the sender's personal box as well, I might be able to help you with. Really, I'm a nice guy. Thirdly, saying please goes a long way as I've already told you. Fourthly, why did you address your comments to me? I assume that it was addressed to me, since as I said this same post appeared in my mail box. If that wasn't deliberate, we can toss out my "fourthly". :) I didn't start this thread, and it's pretty obvious from the title that's way off-topic.

And fifthly, I can't help but note that YOU failed to add OT to the header when you posted this last message to the group. Was that a simple oversight, or do you just advise others without taking that advice yourself?

I've corrected the situation with the headers, and I apologize to anyone who I may have offended by my contribution to an off-topic thread.

--
Ignorance more frequently begets confidence than does knowledge; it is those who know little, and not those who know much, who so positively assert that this or that problem will not be solved by science.

Message-ID: <mAJJ6.1863$TI2.1337341@typhoon.san.rr.com>
Source record: 65978

I read a couple posts here that mention packet radio, and was wondering if there's a FAQ or website that explains how to have the computer 'read' the sound card (mic input side) and show the waveform as an oscilloscope would. I have Microsoft Visual C++ 6.0 and VB 5.0, but the online manuals don't really explain how to look at the 'raw' info from the sound card, just how to talk to the CD player to play tunes.

Can anyone tell me which Bearcar Sportcat Model it is that picks up cell freq's? I looked at one today, a hand held the shop owner let me test it out in the back room and it did pick up cell's.
I dont know the model # for the scancat did not know at the time there were several different ones, Would like to find out the model I looked at today so I can shop around on the Internet to see if I can find a better price.
He is asking $149 for this one.

Thank you

It takes a little more effort to get the frequencies out of it...

Once you get to the list, choose the call sign you want to look at. If you don't get a large list most likely these will open up automatically....

In any case in order to get the frequency, you have to click on the link name SITE. Then from that display you have to click on the link labeled FREQUENCY. This will give you the frequec(y)(ies) you are looking for...

Hope that helps you out...

>
> Sorry for the newbie question, but I am a newbie :)

I am happy with an Astron SS-18 12v. which has ample you'd think for all that and
runs cool.

Remember to fuse the cords to each device for current that the device needs.
Also fast-blow fuses work better because they don't heat up themselves.
Get a multiple fuse block or so and lots of fuses.

DC supplies can easily start fires if something partially shorts otherwise.
Wall warts either have high internal resistance to limit current, or have
a breaker themselves. Real supplies can burn up wires without exceeding
their rated capacity, so the fuse on the supply itself is not a protection.

Sorry but this is total BS. The communications act of 1934 guarantees any citizen the right to listen to radio frequencies provided the information gained is not used for illegal purposes. The act also states that no city, county, or state authority has the power to enact laws regarding the transmission or reception of radio waves. That authority rests solely with the FCC. This is why if you are knowlegible, (and have the financial resources), you can beat any charge against you arising from having a mobile scanner or fuzzbuster even in states where they're posession has been made illegal. It's because the law is invalid in the first place since ONLY the FCC has the authority to regulate the airwaves.

This is also why homeowner association rules have been shot down regarding trying to prohibit you from putting up an antenna on your property because "the rules" say you can't. They don't have the authority.

NEW - NEVER USED Comet model # SMA3 Tri-Band (3 band) HT and Scanner Antenna. Designed for TRANSMIT AND RECEIVE on the following frequencies ... 144 MHz to 148 MHz (2 meters) ... 420 MHz to 450 MHz (70 cm) ... and 902 MHz to 928 MHz. It is also a WIDE BAND RECEIVING antenna that covers 118 MHz to 160 MHz ... 250 MHz to 290 MHz ... 360 MHz to 390 MHz ... 420 MHz to 470 MHz ... and 820 MHz to 960 MHz. It is one of the finest handy talkie (HT) and Scanner antennas that you can buy. The Comet SMA3 is 10" high and comes fitted with an SMA connector. It's ready for use on some of the most popular HTs and Scanners on the market today like the Yaesu VX-5R and FT-50RD ... and the Icom IC-Q7ABC and IC-T81A. If YOUR radio has a BNC connector, there are low cost adapters available that will allow you to use this fantastic antenna on almost ANY HT or scanner. This is a brand new antenna and it comes packaged in the original factory vinyl carry pouch.

Check it out at:

Okay as this has turned out to be a discussion, I will try to clarify a copal of things

1. These sets are all EU sets, Unblocked
2. I do offer a full 12 month warrantee,on UNBLOCKED scanners. If there are ever any problems, Just return them to my company in Kentucky
3. I also have a company in England
4 e-bay has never pulled any of my listings EVER and I make it clear that the scanners that I sell are unblocked. I have 5 listed at this time, If you like , Try to have them removed. if you have the time on your hands and have nothing better to do.
5 Dev was correct is his statement

I wonder if you guys who responded to my posting have unblocked scanners? If you do, why are you casting doubts about the service that I am offering? could it be that your trying to spoil it for others? if so why?

So I wish you well with your listening.

Martin

I have the full text of the act in my hands and there is nothing in it that refutes the 1934 act as it applies to listening to radio communications AS LONG AS the information gained is not used for illegal purposes or financial gain.

Section (g) page 6

"It shall not be unlawful under this chapter or chapter 21 of this title for any person--

(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the general public;

(ii) to intercept any radio communication which is transmitted--

(I) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;

(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;

And on and on, but there is no prohibition on divulging or recording such transmissions unless, (like I said earlier), it is done for illegal purposes or for financial gain. This has not changed from the original 1934 law.

As a matter of fact, these transmissions, (since they are produced with equipment purchased at taxpayer expense) are not even protected by federal copyright and can be freely distributed.

Found some active military air frequencies today.
No idea who/where they are, it was mainly fighter training but the pilots
had french & german accents.
Any ideas?

well sinc emost of those are receivers. and one is a tx/rx. A 12v atleast or 10 amp. should works. if in doubt buy one that is a 20 amp. just remember that not all of those wall ac adapters will be 12 volts output into the radio. most radios will be between 3.8 - 12. look at the output on your ac adapter to make sure. but I think 10 - 20 amps will suffice.
unless you get nore "tx/rx" transmitters. all should be good. transmitters take more ampers when transmitting. one radio at 12 volts at 50 watts output will take easily 8 to 10 amps.

73, hope this helps

Just tell the dispatcher you want to remain anonymous. Many places accept anonymous tips. And in a lot of areas (maybe all, by law?) if you call from a blocked phone number on a non-911 line (regular 7 digit emergency #) they can't get your ANI info anyway. That's why areas with 911 encourage you to use it (my phonebook doesn't list 7 digit emergency #s for most of the local PDs, just "DIAL 911"...a real pain for programming cell phone memories), because if you call on 911 they get your caller ID name/number/address/etc in case you are disconnected.

Matt

There's also the many 'live feeds' of police-radio from different parts of the country... ;)
They are temporarily (digitally) recorded, sorta on-the-fly, in order to be sent to the listeners...
But where exactly does it say it's "perfectly legal" to do such?

Well I can not exactly say it is legal but I see no harm in it. Also there are some other sights that I have visited that have 911 calls and other chases I am just following in there foot steps. If it is illegal I will remove it but for now I don't think it is illegal.

More to the point is that some of the wall warts may be supplying AC
instead
of DC.

Since you know what radios you want to power, make an inventory
of the information on each of the wall warts. Each one will list
the output voltage, current, and whether it is AC or DC. In this
list also jot down the type of connector used and, at least for the
DC units, the polarity hookup. Some may use the barrel for negative
and the center pin for positive. Some may do it the other way around.

Assuming that all of the transceivers are within legal limits,
the most you should need at 12 volts would be a 10 Amp power supply.
Radio Shack sells supplies with this rating at prices comparable
to other suppliers. If you really want a cheap one, go to a Ham Fest.
You can pick them up real cheap. The Shack also will have all of
the wire and connectors needed to make up your power distribution
system. If any of the units require AC voltage, The Shack also had
a variety of transformers that will fit the bill.

It is not going to be as easy a buying a power supply and just pluging everything into it. However, once you have your requirements laid out the rest should fall into place.

No, I don't work for Radio Shack, but they are convenient and do have a lot of stuff. Just don't depend on the knowledge of the staff. They usually don't have a clue about what you are talking about.

I would never "assist" the law unless it was directly requested of me and then
I would make sure my ass was covered.
Having anything to do with police, or law or whatever can easily backfire
and you end up being a criminal in their book.
I would never volunteer anything or lend a hand to police unless they directly
ask me, politely. As far as me oweing them something where they demand my
assistance, just like everyone else, they can screw themselves with that attitude.

>have nothing better to do.

If this was directed to me, I have no interest in having your scanners removed from eBay. On the contrary, I believe in the free market and was simply trying to help you achieve success in your auctions by giving you advice, based on my personal experiences.

I have found that if you make any reference to "cellular", "receives phone calls", "modified", "opened", full 800Mhz coverage", "unblocked", "expanded coverage", "unrestricted coverage", etc., eBay will cancel your auction and you will not be able to sell your item. If you make NO reference to the ability of the scanner to receive 824-894Mhz, the auction will be allowed to proceed to completion. Just trying to help. Your mileage may vary.

Unfortunately, now that you have issued an open challenge of "try to have them removed", you can bet your clipped diodes that many others on this forum will now contact eBay and attempt to have your items removed. It's like jumping out in front of an armed robber and saying "Shoot me!" Besides the challenge factor, there are many on this newsgroup who resent the posting of eBay items on here. These folks will also do everything in their power to ensure your auctions are cancelled.

Again, I don't agree with these tactics, I'm simply telling you what goes on here. In the future, I would recommend that you simply list your items on eBay and make no references to them in the radio newsgroups. Just a suggstion.

>
>I still use my 2006.

The 2006 was a star performer in it's day, but has since been replaced by much better technology. By today's standards, the 2006's scan rate is slow, the number of channels is limited, and of course, it will not track trunked systems. Even it's big plus...the ability to receive full 800Mhz...is of limited use today, since most areas have switched from analog cellular to digital Nextel and PCS systems.

Having said this, the 2006 still has a huge "cult" following and attracts substantial prices on eBay. If your 2006 is in good condition, I would suggest you sell it on eBay while the market is still hot. You should realize between $250-300, depending on condition. Take the proceeds, add <$100 out-of-pocket, and buy yourself a new Uniden BC780XLT. This is the scanner to have in today's world.

Unfortunately, the best Congre$$ that money can buy has superceded the
Communications Act of 1934 at the insistence of the cellular telephone
industry. This resulted in the ECPA in 1986, amended (made more restrictive)
in 1994.

3385. In praise of R8 VHF converter

Source record: 65868

I use two scanners (a Pro-2006 and BC-245XLT), but for best sensitivity, I turn to the VHF converter in my Drake R8 short-wave receiver.

It picks up marginal signals that the scanners don't (on the same discone). The audio's better, too (not to mention the mode flexibility).

I'm just pointing this out because nobody else has.

I reiterate:

READ FCC PART 97. Not State city or county part 97, but the Federal
Communications Commission's Part 97. Also, the recent prohibitions regarding
cellphones and cordless phones were enacted by the FEDERAL Government. Not city
county or state government.
Read it, then come back and post your comments.

Ya they allow anonymous tips here too. like you said. but the stupid thing here is that the 9-1-1 has all you infoi right when you call it. How do you think they call you back when you prank them or dial it by accident. But if they release any of your info. there could be a good lawsuit. since you DID say you want to be anonymous.

I totally agree with you. it is sometimes nice to listen too. Sorta like watching FOX police chases. I have only seen a few people get caught for posting live audio cause of the law about rebroadcasting. but if no one complains. have fun. :) . i wasn't complaining. Don't get me wrong. i seem to have others thinking different then what I meant. I would post or even have live audio or even java controlled radio's running. but in alberta and a few other countries have been cracked down on. Why does everyone want to argue.

have fun. and keep posting the good files. next. hehe. Video.

I live near the Portland, Oregon airport and really enjoy listening to the planes and the tower via a scanner. Have become a real aviation fan. Well the other day the thought hit me could a person track the different planes coming in with "marine radar" I know nothing about these devices but thought maybe someone here has tried it. Is it feasible?

Any information appreciated

Jim Peters

I think he means marine radar, like you see of some of the larger pleasure boats. It's normally used to track other boats, and possibly storms.

It's an interesting question, as some of these units show up used, for reasonable prices. I wonder though, if they could also cause some type of interference to the plane...something that would not be too cool!

I am anxious to purchase my first scanner but my knowledge base is limited to the threads in this and other newsgroups. I would like a portable scanner. I would like to be able to get all frequencys and am considering the following options: 1) a BC-245XLT plus an inexpensive unblocked used scanner to pick up the remaining freq. 2) a UCB-3000XLT. But I'm not sure if missing the trunking feature will be something I regret. From my reading these seem to be pretty decent scanners. Please offer any advice or other suggestions by posting or by email. I am going to Germany next month so if there are any other scanners I should be looking at please let me know. The people in this group seem to be very helpful. Thanks in advance

If you buy the European BC245 Model it is set up for 66-88 Mhz and not 29-54
MHz. It will not follow US trunked systems either. I don't know what you want
to listen to, but find out if the police, fire and government stations in
your area used trunked systems. Check out http://www.trunktracker.com/

The best all purposes scanner is the BC780Xlt, of course it has blocked
frequencies, but to tell you the truth listening to cell phones gets very
boring after awhile, I listened back in the early 80's. How many times
do you want to listen to mom calling home asking if the kids need milk?

Besides most cell phones are now digital and in a couple of years
all of them will be.

Get the BC245-XLT, and forget about cell phones. The majority of cell phones has gone digital, so even with the UBC3000-XLT, you won't be able to monitor them. Added to that, it is illegal to do so, not to mention, sounds like a pretty boring activity.

Maritime surveillance radars are generally ill suited for aircraft
tracking. It doesn't mean it cannot be done, they just don't do it
very well. Some years ago I was at a NATO Maritime Surveillance
Radar station. It had requires substantial re-engineering of the radar
to make it deal with Aircraft even half reasonable. Ships generally
don't move very fast relative to airplanes, so you can hand plot speed
and direction of a ship. Airplanes move fast enough that they usually
have to have headings and speeds calculated or measured by radar,
which requires substantially more signal processing then most maritime
radars have, and in a maritime radar even it does the processing,
there usually aren't a range ' boxes' for speeds above 50kt...

If such is the case, I would suggest to those with a problem to add a filter to there news reader to filer out such posts. It's easy to do, and takes hardly any time. I don't see any reason why eBay "FA" or any other type of auction posts shouldn't be posted here if the item is relevent to the subject, which in this case would be scanners or related accessories... Sounds to me like a bunch of uptight control freaks that have to have everything their way, or no way at all. People like this need to grow up...

For those who are interested, here are the links to the court rulings in the Larry Gass case. If you aren't familiar with this case, Gass was arrested in 1995 and charged in U.S. District Court for violating Federal law by programming Motorola radios for various Tulsa, OK media. Tulsa had just switched to a 800 MHz trunking system, and wouldn't let the media have (receive-only) access to all the radio groups, just a special city-wide frequency that they could turn off so the media couldn't hear what was going on. Gass programmed the various talk groups into radios for some of the Tulsa TV stations and newspaper. Word got out, and they decided to "Make An Example" of him. But the judge didn't go along. Both the original case and the appeal were dismissed.

http://www.afn.org/~jlr/gass1.txt
http://www.afn.org/~jlr/gass2.txt

Mark S.

PS: Remember, this all occurred prior to the introduction of trunk-tracking scanners. If they courts had decided against Gass, I wonder if the trunk-trackers would ever have been introduced.

Jim,

Jimdpeters wrote:

> could a person track the different planes coming
> in with "marine radar"

generally speaking, no you can't. The main reason is the opening angle of the radar antenna, which is designed to detect objects in a considerable altitude of only a few meters over the water (a flat surface) and not on different altitudes, as it seldom happens that ships fly at 1000ft/300m. So the opening angle of the sending/receiving antenna is very limited towards the sky. Second reason is simply to prevent that a marine radar detects for example low flying airplanes as it is not related to the information a captain needs to navigate a ship. It would simply ad a lot of confusion if it could detect airplanes.

This does not mean that you can't modify a marine radar to meet your desires but it will be absolutely not an easy task to do so.

Regards
Howard

You're actually referring to the ARPA function of marine RADARs -- ARPA meaning Automated RADAR Plotting Aid. This is the feature that tracks the "green blob" -- or target return -- and calculates, course, speed, range, bearing, closest point of approach (CPA) and time to CPA (TCPA). You're correct that a marine ARPA would not likely aquire and track a high speed target such as a commercial aircraft. In any case, this kind of feature is not typically found on recreational boat type units, but only on much more expensive commercial sets.

Nevertheless, marine RADARs (of the inexpensive recreational boater type) tend to be relatively low power, limited range units. They will still see many miles, but when mounted on a small boat or even yacht, their range is generally determined by the height of the antenna above the water. Horizon ranges of under 10 miles are not uncommon.

A more limiting factor for aircraft is the vertical beam width. This is usually ï¿½10ï¿½ above level, so if the aircraft is more than 10ï¿½ above the horizon the RADAR is unlikely to "see" it. At a distance a commercial aircraft may well be below that 10ï¿½, but may be beyond the range of the

RADAR. Close to an airport I don't know.

You could conceivably mount the antenna off level, but it would then only be effective in one direction. Alternatively you might be able to "tilt" the antenna up 10ï¿½ right on the scanner, leaving the scanner pedestal level. This would give you coverage from horizon to +20ï¿½. You might be opening a Pandora's Box however, and you would certainly be modifying the transmitting elements of a 2-5KW transmitter. I'm guessing the FCC (or other local regulatory body) would be none to happy.

As far as the RADAR transmission interfering with the aircraft itself -- these aircraft are continuously hit with RADAR and other transmissions of all types all the time from all angles from a zillion different places. Even lots of airports are on or very near the water, where there may be lots of marine traffic, complete with RADAR. It's a complete non-issue.

Ok....lemme get this picture complete....

Cruising around in the mighty crown vic. Don is driving...macky has the beers.
" Hey Chickies...wanna party???" they shout at the north beach T-girls...
"Are you Cops?" they ask..
Don says..."no' even though he wants to say yes..

"Wow....do you have the internet in your car"? the sexy lil ladyboys ask...

Now our lil wannabe crime fighters are all twisted up...sex depends on the
MDT now....

ladyboy#2 says... "does it work?"......

So what would YOU do in this situation?????

And don....
if you actually ever get back here to read this understand one thing....
I like taking potshots at you every time you spam this stupid add.....after
all...it's been for sale for how many *years* at $150????

You and WeBmedics need to do a little deja on themselves....

Reality Check!!!!!!!!!!

Depends on where you're located. In a large city, yes, the anonynimity of the participants would tend to make it boring. But in a smaller community, it tends to take on a more "personal" touch. As Mr. Rogers would say, "these are the people in your neighborhood."

Listen as your trusted neighbors and friends engage in illicit affairs, sleazy business deals, drug sales/purchases, etc. Certainly opens your eyes as to what's going on around you, no?

They have been happy whne I called too. The last time I remember was a year or so ago. I had to collect money out a a paper coin box. some guy was staring at me as if I was stealing it. I asked him if he had a problem and why would I steal money like that, in public, in daytime. I had to go into the mall for about a half hour. I cane out and was ready to drive away when I heard my surname on the radio. I knew there was maybe 3 people with the same last name in the town of 200 000 people. I call the cop shop asking why they wanted me. Dispatch was very lost. Asked how I knew. I told her My mobile 2 meter radio was scanning and I heard it. it saved them time to search for me. and The officer that had to search I had to visit. She laughed and thanked me for it. Sorta laughed at the guy too for calling it in. I told her I told that goof off for staring too. If it saves them from searching for you. they are usually very accepting about a anonymouse call.

I think you misunderstood the announcement. Alinco products will still be sold in the same stores you would normally buy them. This change should be mostly invisible to consumers (except for service, as you mentioned). All they have done is added a layer to the distribution channel, so that dealers will get their products from Atco instead of directly from Alinco USA. It is possible that the added distribution layer will create higher prices.

Cross-posted to: alt.radio.scanner,alt.radio.scanner.flame_fest,alt.radio.scanner.uk,free.uk.scanner-radio,rec.radio.scanner

While the News Groups provide an invaluable service by allowing scanners to talk to each other I find local information hard to get hold of.

I as you can see in my SIG have set up a regional group so I can get local information there and if I need wide range information I can come to the news groups.

The whole point of this post is to try and encourage more of you to set up local groups, its free, its easy and once set up that's it. I f you wish to then sit back and let the members run it so be it, it is so easy.

The regional groups around now are mine
http://www.groups.yahoo.com/group/North_West_Scanning_Group

And
http://groups.yahoo.com/group/scottish-scanning
http://groups.yahoo.com/group/SouthScanner
http://groups.yahoo.com/group/UKMidlandscanner

I would love to see every region with its own group, may be even every city and town.

I fear scanners that can not get local information will grow board of the hobby and that would be a step backwards for us all.

If any one wants more information or help setting up mail me at
scanning@blueyonder.co.uk

THANKS FOR YOUR TIME
RICK

3453. RF/LF filter for HF-RX on ICOM R-10 scanner?

Newsgroup: rec.radio.scanner
Date: 2001-05-09 19:59:36 UTC
From: Lars Myrthu Rasmussen <lars@myrthu.net>
Message-ID: <JkhK6.1898$h4.398324@news101.telia.com>
Source record: 65939

Hi

I wan't to use my ICR10 scanner for listening on the HF bands. The only antenna i have is a longwire laying on the floor inside my apartment.

Any good experinces with active/passive RF filters 1.8-30 MHz?

I also wan't to add a LF filter, mostly for cw, but also SSB (AM?) if possible.

I have looked at MFJ filters but they are rather expensive.

So please if anyone has links to diagrams/articles, or kits to buy, that would be nice.

Best regards
Lars

Seems as though you got your wish. Clicked the Link and they are now "invalid"

I hate to say it but there are some who object not only to Ads. here but also
to Cellular Scanners, by telling people to "Try and have them removed" will
almost always generate a responce.

Ebay policy does clearly state NO CELLULAR SCANNERS,
I just hope that someone does not take this to US Customs or the FCC; both of
whome would probably jump on a case of a Commercial Dealer who is Importing and
Selling Cellular Service Band able Scanners out in the open.

Your Sell page said you had Government Contracts/Orders; this would certianly
put a damper of further orders I am sure.

Just watch your A#% !, what you are doing is illegal and by flaunting it out
like this you only tend to invite problems.

BTW: No I do not own nor use a Cellular Scanner, could care less about the
mundane goings on in that part of the Bandplan.

Just my $0.02 worth.

Hello. I have the following radios and equipment for sale. Prices are listed, but serious offers considered! I NEED CASH!! Please email me directly.

4-Motorola speaker/mics HT 1000 $ 50 ea

13-MOTOROLA HT1000 16 CHANNEL RADIOS UHF $ 325.00 ea
(please note: These were all taken as a trade-in - Some are 2 ch converted to 16 channels. First buyers get real 16 ch radios.)

8-MOTOROLA SPARE BATTERIES HT1000 $ 20.00 ea

1-MOTOROLA GP300/P110 6 GANG RAPID CHARGER NEW $ 250.00

2-MOTOROLA P10 1 CHANNEL VHF RADIOS W/CHARGERS BUT NO POWER SUPPLIES $ 150.00

1-MOTOROLA 6-GANG P200 RAPID CHARGER $ 250.00

4-MOTOROLA P200 RADIOS UHF W/SPEAKER MICS $ 200 ea

3 - MOTOROLA P200 RADIOS VHF (No batterys) $ 125 ea

2 - MOTOROLA GP350 VHF 16 CHANNEL $ 300 ea

1 - MOTOROLA GP350 SPEAKER MIC $ 40.00

1 - MOTOROLA GM300 UHF 16 CHANNEL 40 WATT $ 275.00
This radio has a minor problem - I believe it needs a good tuning, but dont know enough to guarantee anything - No Mic or 16 pin connector. Radio only.

All equipment has been tested and is in good working order, but as with all electronics, is sold AS-IS! Paypal accepted and suggested, but will take USPS money orders.

Thanks for looking!

I am thinking of getting an Amphenol N male connector from AES. The model # is 82-202-1006. This is a clamp type connector. I'm getting this for my LMR400 coax. I think this connector is meant for 9913 type coax. According to AES, I will have to cut a few strands of the braided wire if the connector gonna fit with my LMR400. If I cut a few strands, will this reduce the performance of my antenna system (Diamond D130J).
Thank you.

Coast Station.

Lets say some guy named Mark J. is driving his car with scanner and cell phone in hand and hears a APB on a black Mercedes License number qq-78966. Low and behold Mark J. sees the car about twenty minutes later. So he calls it in on his cell phone. The police stop the vehicle based on Mark's tip, but low and behold it isn't the right car, unfortunately noisy body Mark J. didn't look closely at the license plate and neither did the police. The people in the car were held at gun point and then handcuffed until dispatch cleared them of the issue. Later on in a civil rights lawsuit the attorney finds out Mark J. is the person that falsely accused his clients of being criminals to the police. Mark J. has a nice job, home and money in the bank account. He also has a nice home insurance policy. So Mark J. is named as a defendant in a lawsuit.
Mark J. runs to his friendly lawyer and he will represent him for a $10,000 retainer up front. Lucky for us Mark J. is dismissed from the civil lawsuit and his lawyer pockets a nice $30,000 in fees. You won Mark J. and your lawyer is going to Disneyland!

Do not disclose what you hear over a scanner to anyone. Do not use the information you hear to notify the police of any criminal activity or go to the scene of a crime. For example, you see a person break in to a car and report it to the police is a lot different then hearing about it on your scanner and going to the scene to catch the criminal. Once you get involved

in a police action, criminal case and/or lawsuit you will regret it because the lawyers will drag you through the mud and destroy your life. You will soon hate the day you ever got involved with a police action while listening to a scanner. Scanning is a hobby, not a way to inconvenience the hell out of your life.

The better question is what is your termination at the antenna. If you have a So239 that accepts the PL259, I dont think you will get any thing from using a N connector with an adaptor. If you are planning to put your connection at the antenna, now you are comprimising the LMR jacket to accomodate your connector. Tessco sells the LMR cable and connectors. Maybe you should contact them for the correct parts.

N connectors are not as easy to terminate as the PL259.

One thing that I found out is that scanners work really well on low band, and the higher you go, the worse things get. I havent tried the latest stuff, but UHF usually whistles and 800 is kinda deaf. Perhaps you should look at different equipment.

You are confused, if you see a person choking in a restaurant is a lot different then hearing a police chase or other emergency call and responding with your scanner and cell phone to help the police and fire department. If you do the latter then you are committing criminal and civil torts. Helping someone choking in a restaurant from choking to death is usually covered under good samaritan laws unless you do something to worsen the situation.

Hi Dave, I use the 200 myself and replaced the original battery with the MetroWest 1200 mA pack. I got quite a few years use out of it before it stopped holding a charge recently. At that point I took the original 200 battery pack apart and replaced the NiCd pack with NiMH's rated at 1400mA.

You could use the original charging circuit in the pack but it will not charge the NiMH fast enough unless you modify it. As I recall you can drop the value of R601 from 27 ohms to increase the charging current. I tried it yrs ago and don't really remember the exact charge rate, if you try it make sure you put a meter on it to check the actual numbers for the current. I think I upped it to 150mA from the 80mA factory charge rate but I only used 600mA Nicads on it. You can experiment on your own, just use caution as NiMH seem to be much more prone to damage from overcharging at rapid charge rates than Nicads.

When I put the NiMH in I removed the original 200XLT charging circuit and replaced it with a board I cut that only has the coaxial jack on it, I use an external homebrewed charger instead, but Maha has one that may be what you might like (URL's below) or you can build one with a Maxim chip as Roger suggested.

I read a lot of posts on the RC newsgroups before deciding to try a Maha MH-C777 universal charger. Someone who buys an expen$ive RC plane is going to buy the best batteries and charger he can get as a rule. The Maha and NEXcell batteries seem to be among the best you can buy right now.

Thomas Distributing is well spoken of among RC users so I checked out their site. The NiMH are available in solder tab or button tops. I use the 1600 NEXcells in my Pro-43 and it ran 15 hrs straight after the NiMH had been charged only once. The 200XLT gave me an 18 hr run time after two cycles with 1400mA NiMH's.

FWIW, keep in mind that the NEXcell button tops will not fit into every application like my AR8000, they're too fat. Instead I use RadioShack's 1500mA NiMh batteries and the 23-034 charger for them, great setup, you can use it in the car or at home with an adapter I got over 15 hrs scanning with the AR8000 the first time I charged the batteries.

The 8000 draws about 115mA just scanning, that bumps up a lot when the squelch breaks. The 200XLT draws about 60mA while scanning. In all cases I ran the scanners through very active frequencies to drain the batteries as fast as possible. I didn't like the first generation NiMH batteries but the new ones on the market now are great.

http://thomas-distributing.com/index.htm
http://thomas-distributing.com/nexcell-aa-t.htm
http://thomas-distributing.com/maha-dba-tab.htm
http://thomas-distributing.com/maha-mh-c777.htm
http://thomas-distributing.com/techfacts.htm

If you're looking for NiCd solder tabs or already built packs then try http://nicdlady.com/ Perhaps someone else can list their favorite sites for rechargeable batteries in a followup post. Bob Parnass has mentioned places to buy rechargables in the past and I'm sure some of the Hams in this group can help too.

The ARRL Handbook also has charging circuits for batteries that you can build, I use one on the NiMH for slower charging. It works fine for me so far. Try contacting Uniden about the use of their 200XLT charging system on NiMH. I contacted Opto Electronics before swapping out the Nicads in my Scout. Opto does not recommend using NiMH on the older Scouts with the rapid charge system, they felt the newer Scouts (w/o the LED on top) would handle NiMH OK.

Any questions, just post them here or email me. The mailbox is "cjcolumn" and the address is "@hotmail.com" Put the words "scanner digest" in the subject line to get around the spam filters. Hope some of above info helps. - Louis

>He may have simply gotten infected, and the virus is using his address book,
>but why I may be in his address book is a mystery to me.
>
>So if you receive any attachments from bbowers@townsqr.com do not open it!

Here is some info from McAfee.com on the virus.

Virus Name
W32/Magistr@MM
Date Added
3/13/01 11:48:44 AM

VIRUS FAMILY STATISTICS - Past 30 Days
Virus Name Infected
Files Scanned
Files % Infected
Computers
W32/Magistr@MM 83,280 72,587,913 1.12

Virus Characteristics
W32/Magistr@MM is a combination of a files infector virus and e-mail worm.
-The viral code infects 32 bit PE type files (.exe) files in the WINDOWS
directory and subdirectories.
-The worm part is using mass mailing techniques to send itself to email
addresses stored in several places. The worm installs itself to run at each
system startup.
Five minutes after the virus is run, it attempts a mailing routine. Email
addresses are gathered from the Windows Address Book, Outlook Express
mailboxes, and Netscape mailboxes (address found in the email messages within
existing mailboxes are gathered), and these file locations and addresses are
saved to a hidden .DAT file somewhere on the hard disk (varies). The messages
sent by the worm contain varying subject headings, body text, and attachments.
The body of the message is derived from the contents of other files on the
victim's computer. It may send more than one attachment and may include non
.EXE or non-viral files along with an infectious .EXE file.

The virus proceeds by infecting 32 bit PE (Portable Executable) type .EXE files
found in the WINDOWS SYSTEM directory and subdirectories. The viral code is
encrypted, polymorphic, and uses anti-debugging techniques to make it difficult
detected. Email addresses have been seen encrypted in infected files. These
addresses are believed to represent other users that have also been infected

from the same point of origin.

In the decrypted body of the virus code, the following comments exist:

ARF! ARF! I GOT YOU! v1rus: Judges Disemboweler.
by: The Judges Disemboweler.
written in Malmo (Sweden)

W32/Magistr@MM has a payload routine that on some systems may result in
cmos/bios info being erased as well as destroying sectors on the hard disk.

Send This Virus Information To A Friend?

Indications Of Infection
- Increase in size in .EXE files (adds 24Kb or more)
- Infected files use a modified access date of the time of the infection
- Presence of a newly created .DAT file containing email addresses
(representing those users which were sent the virus)
-Entry in WIN.INI RUN=(App)
-Entry in Registry, run key value:
HKLM\Software\Microsoft\Windows\CurrentVersion\
Run\AppName (varies)=C:\WINDOWS\SYSTEM\(App).EXE (varies)

Method Of Infection
This worm which arrives as an .EXE file with varying filenames. Executing this
attachment infects your machine which is used to propagate the virus.

When first run, the virus may copy one .EXE file in the WINDOWS or WINDOWS
SYSTEM directory using the same name with an altered last character.

For example, CFGWIZ32.EXE becomes CFGWIZ31.EXE, PSTORES.EXE becomes
PSTORER.EXE, etc.
(this naming convention seems to be consistent where the last character of the
filename is decreased by a factor of 1)

This copy is then infected and a WIN.INI entry, or a registry run key value may
be created, to execute this infected file upon system startup:

HKLM\Software\Microsoft\Windows\CurrentVersion\Run\
CFGWIZ31=C:\WINDOWS\SYSTEM\CFGWZ31.EXE

This copied executable infects other PE .EXE files in the SYSTEM directory and
subdirectories, when run. It also infects over open network shares.

This virus will create a .DAT file on the local file system which contains
strings of the files used to grab email address from (.dbx, .mbx, .wab), and
also strings of email addresses which will be used as a target list. The .DAT
file will be named after the machine name, but in an offset method. For
instance, here is a corresponding list of letter equivalents used:

original letter corresponds to
a -> y
b -> x
c -> w
d -> v
e -> u
f -> t
g -> s
h -> r
i -> q
j -> p
k -> o
l -> n
m -> m
n -> l
o -> k
p -> j
q -> i
r -> h
s -> g
t -> f
u -> e
v -> d
w -> c
x -> b
y -> a
z -> z

Numbers are not affected. So a machine name of ABC-123 would have a .DAT file on the local system named YXW-123.DAT.

Removal Instructions
Use specified engine and DAT files for detection and removal.

Windows ME Info:
NOTE: Windows ME utilizes a backup utility that backs up selected files automatically to the C:_Restore folder. This means that an infected file could be stored there as a backup file, and VirusScan will be unable to delete these files. These instructions explain how to remove the infected files from the C:_Restore folder.

Disabling the Restore Utility

1. Right click the My Computer icon on the Desktop.
2. Click on the Performance Tab.
3. Click on the File System button.
4. Click on the Troubleshooting Tab.
5. Put a check mark next to "Disable System Restore".
6. Click the Apply button.
7. Click the Close button.
8. Click the Close button again.
9. You will be prompted to restart the computer. Click Yes.

NOTE: The Restore Utility will now be disabled.

10. Restart the computer in Safe Mode.
11. Run a scan with VirusScan to delete all infected files, or browse the the file's located in the C:_Restore folder and remove the file's.
12. After removing the desired files, restart the computer normally.
NOTE: To re-enable the Restore Utility, follow steps 1-9 and on step 5 remove the check mark next to "Disable System Restore". The infected file's are removed and the System Restore is once again active.

I have read that the search lockouts of the Icom R2 fill the memories.
Doesn't this cause a real problem? What about the Yaesu VR-120,
does it also have this quirk? Any comments appreciated.

Billy

Don't go by what people that want to be citizen cop with their scanners say,
go by what the law says. Running around with a scanner in your car responding
to police and fire calls is illegal and stupid.

The easy answer is to look in the manuals (or on the backplate) for each device, total up the amps, and then get a supply that has 50 to 100% higher amp rating.

I have used small supplies floating gelled electrolyte batteries for years instead of
big supplies. Using this technique, you use a supply that is no bigger than 1/10 of
the AmpHour rating of the batteries. This allows for a C10 charging rate if you run
the batteries completely flat. At this rate you will not damage the batteries. Set the
power supply to regulate at the float voltage of the batteries used (usually around
13.6-13.8 volts).

With a 5 amp supply, and a 50 AmpHour Gell cell, I can easily run my HF rig at 100 watts, drawing about 20 amps. Obviously, you can't do this for very long
because you eventually draw out all of the reserve of the batteries. With the above
setup, and with a duty cycle of 50% I can easily operate for several hours. Then,
the 5 amp supply can still put 4 amps into the batteries while running the radio on
receive.

The above is just one example. I also run a repeater/remote base system that can draw
over 50 amps when all transmitters are up using only a 10 amp supply. You just have
to make a power budget, (so many amps draw over so much time), and then size the
batteries and the power supply/charger to your needs. You can use many of the same
techniques that the solar power guys use to plan and run their systems.

3478. Alinco closes US office: Chooses shift to Distributorship in Ohio

Newsgroup: rec.radio.scanner
Date: 2001-05-10 04:01:15 UTC
From: Rafman&#65533; <rafman2u@yahoo.com>
Message-ID: <fooK6.2448$8x4.228559@newsread2.prod.itd.earthlink.net>
Source record: 65815
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.shortwave

Alinco Announces New North American Distributor
Dealer and Customer Service Shifted to Ohio Firm

TORRANCE, CA May 1, 2001

USA Alinco Branch has announced a major change in its distribution structure serving North America. Effective May 1, 2001 Alinco products will be exclusively available to dealers and customer service will be obtained through:

Atoc Amateur Distributing, LLC
23 S. High St., Covington, OH 45318, (937) 473-2840

The Atoc Amateur Distributing operation will be headed by members of the Cota family, who also manufacture and distribute the Iron Horse and ATOC lines of antenna and radio accessories. The Iron Horse line also includes OEM and aftermarket accessories for large vehicles such as RVs, busses and trucks. They are also remembered in the industry as the creator and distributor of the Valor radio accessory product line in the past.

Alinco's corporate function would now concentrate on designing and manufacturing products from its headquarters in Osaka and its ISO 9002 qualified factory in Toyama , Japan. Alinco is a very committed, viable player in the Amateur Radio marketplace as well as branching into related areas, such as the design and manufacture of high quality scanning receivers and power-supplies available to the general public and institutional users such as law enforcement and the military. Alinco believes that having a distributor based in America is good for the dealers and most importantly, good for the growing Alinco customer base.

The transition for dealers should be seamless, as contacts and information will be handed over to the new entity. Evelyn Garrison, WS7A, a long-time Alinco associate, will continue representing the Alinco line for the new organization. Importantly, all Alinco warranties will remain in force and continue to be honored through their term. In addition, customer support and out-of warranty service will be available through the new operation. The repair units currently in the Torrance office will be repaired and returned to its owners within the month of April, while the units in transit will be received and or repaired in California, or transferred to Ohio and the owners will be noticed .For customer-service related information, please kindly visit the PARTS & SERVICE menu on this website for up-dated information. We are sorry that due to this transition our service capabilities are very limited at this moment. Please kindly understand and be patient until the new office in Ohio becomes fully functional.

Alinco is going to exhibit at Dayton Hamvention 2001 as usual, sponsoring W1AW/8 special event station.

Finally, we at the USA Alinco Branch in Torrance, California appreciate your loyalty and patronage with our products, and we do hope that your continued support will be enjoyed in the future by the new organization.

> Should i get an AOR 5000 instead?
> Noel.

First, I wouldn't choose either for AM listening in the HF bands. The AR5000 has slightly faster, stand-alone scanning and more scanning type abilities but seems to work like crap under computer control. In any case, cheap Uniden scanners will "scan" circles around either -- but then Uniden scanners are not "communications receivers".

For the R8500:
- very sensitive
- superior build quality, very rugged
- superior ergonomics and excellent tuning knob
- works better under computer control
- easy to read display
- good price?

For the AR5000+3:
- Sync selectable sideband (but this radio wouldn't be your first choice for SWL) but not a great one
- you can install an *optional* 6kHz Collins mechanical filter. The standard filters are not superior. In any case, how much AM listening would you be doing with this radio??? And perhaps the 6kHz Collins filter is a tad bit narrow for NFM?
- small size

actually if you have a old computer power supply laying around. it give you pure DC. of 5 volts and 12 volts. Some say it sucks cause it is switching. but. I have tried it with a few transeivers that pulled over 15 amps. It worked nice. no voltage drops and I never had no AC humm transmitting or RX ing.

I doubt you'll notice much difference initially.

The real issue won't come until your antenna has been through a
season or two. In other words, make very sure you weatherproof this
thing with several coats of Electrical tape and electricians putty.
Then it may last a few years --maybe more if it's not exposed to
direct sunlight.

start up your internet explorer and put in www.groups.yahoo.com

If you have a yahoo ID you are ok, if not get one by clicking register in
the top right of the screen.

in the middle you will see " Start new group " click that and follow the on
screen prompts.

You can go back in and change the settings, group description afterwards so
don't worry about making a mistake but its as lot simpler if you do it when
you can sit down and think about what you want to put.

Have a look at some of the other groups and see how they are used if you are
unsure of how the groups operate.

It really is simple there is nothing to it, when its set up let me know and
I'll spread the word and hopefully your group will take off...

If you have any questions just mail me...

I have a VR-500. If it uses it's memory anything like the VR-120 then you'll still have 640 channels each with a 6-character alphatag. It's not a problem.

dearfeather@hotmail.com

3498. Now I'm confused...

Newsgroup: rec.radio.scanner
Date: 2001-05-10 20:03:58 UTC
From: (unknown)
Message-ID: <3afaf23c.1963277@news.pix.za>
Source record: 65835

Thanks to everyone who responded to my query in respect of Icom R8500
vs AOR 5000.
As stated in my earlier post I had intended purchasing the 8500 but
read in the newsgroup that it might be a little "deaf" and that I was
then considering the 5000 as an alternative.
The responses generally convinced me that the 5000 was the right way
for me to go. However, the final response said that it was a "bitch"
under computer control.

I specifically want a sensitve VHF/UHF scanner which works well with a
computer. I use ScanStar.
I believe that one of these 2 is the right one but which one?
I'm in S.Africa and no one carries AOR stock so trial and return isn't
possible.
All suggestions or pointers to reviews would be most welcome -- I
can't buy both. Well maybe I can.......

Noel.

3499. 200XLT Repair Question?

Newsgroup: rec.radio.scanner
Date: 2001-05-10 20:17:41 UTC
From: Pete Shifflett <shifflhl@jmu.edu>
Message-ID: <3AFAF764.333DF691@jmu.edu>
Source record: 65836

I have a 200XLT that the speaker has quit working. The earphone jack still works fine. My question is, if I send the scanner back to Uniden for repair will I get the same scanner back? My scanner still rec's to the 900mhz band and I am afraid they will just replace it with another that does not rec in that freq. range any longer.
Is my fear unfounded, and is there a fix I can do at home. Any suggestion?

Thanks
Pete Shifflett

Below is an updated list of groups

E GROUPS

ukawsig
http://groups.yahoo.com/group/ukawsig
This group is for people new to obtaining images from weather satellites.
It's intention is to give tips, information and resources to anybody
interested in this growing hobby.

EYRG
http://groups.yahoo.com/group/EYRG
This aim of this group is to provide & share information to those who enjoy
the hobby of radio communications. This includes scanners, swl, ham,
frequencies, aviation etc etc. All are welcome to join and exchange idea.

Scannerz
http://groups.yahoo.com/group/scannerz
Irish scan frequencies

Northern Ireland Scanner
http://groups.yahoo.com/group/ni_scanner
Radio scanning and frequencies for Northern Ireland (no police or
military!). Includes Broadcasting (TV and radio) plus information on
transmission sites (could be useful for DXers!), emergency services,
airband, marine, PMR, utilities (NI Fire Service and NI Ambulance Service),
paging, taxis, etc.

North West Scanning Group
http://groups.yahoo.com/group/North_West_Scanning_Group
North West Scanning Group Is for scanners and radio enthusiasts living in
the north west of England to post information and frequencies used in The
North West.

UK Midland Scanner
http://groups.yahoo.com/group/UKMidlandscanner
A site for scanner listeners in the midlands area any aspects of scanners,
freqency's, help needed discussions of models of scanners.

Scottish Scanning
http://groups.yahoo.com/group/scottish-scanning
This group is intended to offer Scottish scanner users a facility to
exchange local knowledge for the benefit of all.

South Scanner
http://groups.yahoo.com/group/SouthScanner

A Group set up to allow discussions and trading of frequencies used in
Southern England. All information and topics are welcome, and a
comprehensive list of files can be found on the site.

let me rehrase. not in this newsgroup. in this topic. Most ask questions to learn. They aren't stupid though. How can you be rude and call tehm stupid ? You are the type of Ham operator that gives us other hams a bad name. Scanning and Amateur Radio is a hobby. A learning place. You remind me of a ham in another town where I used to live. he was a drunk! are you a drunk too? He acted as if he knew it all and called everyone stupid in his own terms. It was his way or noway. Sounds to me you are like him. He is still a ham. but gave that whole town a bad rep. very little activity there now. I wonder if your town is like that too now

3504. Sacramento County Trunking

Newsgroup: rec.radio.scanner
Date: 2001-05-10 21:49:18 UTC
From: davidm3123@aol.com
Message-ID: <20010510174918.04913.00005765@ng-fi1.aol.com>
Source record: 65839

A while ago, someone asked for assistance in setting up a trunking radio in the Sacramento area.

After I got my 895, I floundered around for quite a while until I came across Jay's schema which resolved all my questions. I was going to repost Jay's stuff, but I "lost" it (new computer)-- but found it today. Here it is.

thanks again Jay...

dm

Subject: Using PRO-90/BC235XLT on a large trunking system
From: Jay O'Brien <w6go@xxxnospam.com>
Date: Wed, Jun 17, 1998 00:04 EDT
Message-id: <35874045.45B12966@quiknet.com>

FROM: Jay O'Brien June 16, 1998
w6go
@
quiknet.com

TO: New Users of Trunktrackers, BC235XLT / PRO-90

This is a discussion by a "new user" of application of the BC235XLT/PRO-90 Trunktracker on a very large trunking system. This discussion is specific to the Sacramento County system, but it may be helpful to others. I hope so. Page numbers reference the PRO-90 Owners "Manual".

I purchased a PRO-90 to monitor the Sacramento trunking systems, specifically the Sacramento County Sheriff's talkgroups. This is what I learned is called a "Type II" system.

Starting with the confusing and error filled handout from Radio Shack, I obtained many conflicting lists of frequencies and talkgroups from web pages and individuals. After sorting out all the bad information, I entered the 27 real frequencies and started searching for talkgroups so I could compare what I heard with what I found on the web.

I quickly found out that there are at least 200 active talkgroups, and with a lockout limitation of only 100 talkgroups I was not able to get down to just the Sheriff's Talkgroup ID codes. But, I was able to determine that there are several IDs used that are not in any of the listings. That's when I learned that there are 15 additional IDs which can be used for each Type II talkgroup ID. I found out that if I programmed in the Type II ID for the Sheriff's North channel, 8208, that I was missing traffic when it was "patched" to the East channel. Under

those conditions, the ID code was not 8208, but 8211. I also noted 8210 while searching. The Type II IDs are 16 apart, but the intermediate 15 can also be used. I found many instances of IDs not divisable by 16.

Thanks to help from users of the rec.radio.scanner and alt.radio.scanner newsgroups, I learned of the Trunkcom mailing list and several web pages with helpful information. I learned that the "weird" ID codes were offsets used to indicate special purpose use. To be sure to hear all ID possibilities of the Sheriff's north channel, I would have to enter 16 different ID's! Then I learned that the "Type I" IDs are inclusive, that is one Type I ID would monitor a group of Type II IDs, exactly what I needed. The Type I size codes using "S-1" are perfect, as each will hear 16 Type II codes because the byte that designates the 16 individual possibilities is ignored.

I then created a list of Type I (size code S-1) ID codes, one for each of the Type II codes in use. I switched the PRO-90 from Type II IDs to Type I IDs and entered the new codes. Now I don't miss anything. Also, by grouping the codes into the five scan lists, I can, with the push of one button, enable or disable 10 IDs at once. I have entered the 27 frequencies into four of the ten banks, and I have set up different scan lists on each.

One of my banks has scan lists which include ONLY Law enforcement. One is ONLY Fire and hospitals. One is a combination which serves my daily purposes. Each bank has up to 50 IDs, in five scan lists of 10 IDs each. In my combination bank, I have one scan list which has Sheriff's channels 1-10, one with Channels (mode) 11-16, one with the Sheriff's special ops channels, one with 10 fire channels, and one with Park Rangers and Animal Control. I can toggle each scan list of 10 on and off during scanning by just pressing the appropriate number, 1-5.

I'm still refining exactly how I have the five groups of 10 ID's arranged, and I assume that everyone would have slightly different needs. However, here's what I am using now for my combination bank's scan lists. I change this on almost a daily basis, based on what I hear and on occasional "search" mode operation.

General Monitoring
Bank 3

Sheriff Dispatch
Scan List 1
1 100-1 Ch1 North (Type II ID is 8208)
2 100-3 Ch2 East (8240)
3 101-1 Ch3 South
4 101-3 Ch4 Mode 4
5 102-1 SD5 Airport
6 102-3 Ch6 Mode 6
7 103-1 Ch7 Mode 7
8 103-3 Ch8 Mode 8
9 104-1 Ch9 Mode 9

10 104-3 Ch10 Records

Sheriff Tactical
Scan List 2
1 116-1 T1 Mode 11 (Type II ID is 9232)
2 116-3 T2 Mode 12 (9264)
3 117-1 T3 Mode 13
4 117-3 T4 Mode 14
5 118-1 T5 Mode 15
6 118-3 T6 Mode 16
7 105-1 SD11
8 105-3 SD12
9 108-3 DET1 Main
10 100-1 Ch1 North (repeated here so I can switch off scan list 1
(and concentrate on North and Mode 11-16)
Sheriff Special
Scan List 3
1 112-1 NARC1 (Type II ID is 8976)
2 112-3 NARC2 (9008)
3 113-1 NARC3
4 113-3 SPOP1 SED
5 114-1 SPOP2 SIB
6 114-3 SPOP3 SHARP
7 115-1 SPOP4 AERO
8 115-3 SPOP5 General
9 109-3 DET4 Warrants (8816)
10 110-1 DET5 Expl EOD

Fire
Scan List 4
1 040-1 Announce A (Type II ID is 2576)
2 040-3 A1 Dispatch A (2608)
3 041-1 A2 Command 2 (2640)
4 041-3 A3 Command 3
5 043-1 A6 Tac 6
6 043-3 A7 Tac 7
7 046-1 A12 Tac 12
8 046-3 Admin A
9 047-1 Prevention A
10 047-3 Arson A

Rangers, Animal Contr, etc.
Scan List 5
1 216-1 Parks & Rec Announce (17424)
2 216-3 Parks & Rec Mtce (17456)
3 217-1 Rangers Dispatch
4 217-3 Parks Tac 1
5 218-1 Parks Tac 2
6 218-3 Parks Tac 3
7 164-3 Folsom PD Dispatch (12336)
8 272-1 Animal Control (21008)

9 272-3 Animal Control
10 2106-1 Probation (23184)

To try this scheme, put the 27 County channels into a bank. The "real" 27 frequencies are as follows:

866.1125 866.1375 866.3500 866.3750 866.4375 866.6375 866.7500
866.8125 866.8375 867.1000 867.1625 867.3500 867.4125 867.4375
867.6250 867.6875 867.8375 867.9375 868.1375 868.2375 868.2875
868.4375 868.5375 868.6125 868.7375 868.9375 868.9625

Now, to switch the bank to Type I (S-1). Turn the radio off, then back on and select the bank by pressing Trunk. When both "bank" and "trunk" are flashing, press the number key to select the bank. A "P" and the first frequency will be displayed. Follow instructions on page 49, steps 1-8, Programming a Fleet map, using E-1 and USr. Use size code S-1 for each of the 8 blocks in the "fleet map".

Follow the instructions on page 41, Manually storing IDs into Scan Lists. When it asks for "block number and fleet number", enter the codes above before the "dash". The "subfleet number" is the number after the dash. For instance, for Sheriff's Channel 1, North, enter 100, press period, enter 1, press E.

After all are entered, you may want to lock out "records", for instance. When listening to that channel, press L/O. At any time later you may hold down L/O to determine which IDs are locked out and release them as you wish. See page 38. Note that you may only lock out a total of 100 IDs across all ten of the banks.

You may wish to ignore Scan list 5 (Rangers/Animal Control, etc). When scanning, you will see five dashes, 1 through 5. Those represent the scan lists and may be toggled on and off by pressing the corresponding number. Press 5 to turn scan list 5 on and off. See page 43, scanning the scan lists. If you have more than 5 dashes showing, press the PRI key to switch back to the scan list display (see page 44, just above "Scanning Type I....").

And, to remind yourself which of your ten banks you have selected, press DATA (see top of page 38) while scanning.

By the way, here's the conversion formula to go from a Type II ID to a Type I (S-1) ID:

The first digit of the Type I ID is the Type II ID MOD 8192: Remainder MOD 64 for the rest of the digits before the dash, remainder MOD 16 for the digits on the right side of the dash. Example, Type II ID 21008. 21008 MOD 8192 is 2, remainder is 4624. 4624 MOD 64 is 72, remainder is 16. 16 MOD 16 is 1. Thus the Type I (S1) ID is 272-1.

My next project is the Sacramento City system.

An additional factoid: Apparently if you have already programmed talkgroup ID's using Type II ID's (8208, for example) and you switch the

radio to type I, the Talkgroup IDs will appear to be converted to type I codes. I haven't tried this! But, what I understand is that even though the IDs look fine, they won't work. You must re-program them. Just a word to the wise.

I hope this is helpful and helps others in the way I have been helped by others already using the Trunktracker. One of the biggest problems I had was finding key items in the Owners Manual. Hopefully my references here will allow others to avoid some of the frustration I encountered.

Are you sure this was an FRS radio and not a Motorola Spirit business radio? 464.5500 and 467.7625 are both UHF interant business channels.

3507. Newsgroup "policy" regarding auctions?

Newsgroup: rec.radio.scanner

Source record: 65844

Does anyone know this newsgroup's actual policy regarding the posting of items for auction on Ebay?

I, like many others in this newsgroup, occasionally post a notice regarding items I have for auction on Ebay. The items are always related in some way, to the topic, and interest of the newsgroup I post in. As a courtesy, and by the request of others, I always prefixed the subject with "FA:", to alert readers that it is an auction, so they don't have to read it if they don't want to. I have seen in the past that some individuals post their objections to this practice, and attempt to solicit others to join their cause, and drive the auctions off the newsgroup. Usually, the opposite happens, and most of the replays are either neutral, or in favor of allowing the post.

Recently, I had a couple such post in this newsgroup, and someone reported it as UseNet Spam, to Ebay. I received the following email from Ebay today:

Hello,

Your account on eBay has been reported for sending SPAM about your eBay auctions to Usenet/Newsgroups. eBay cannot judge or evaluate the Usenet post, but we have received a complaint about your posting. We would like to remind you that unsolicited commercial postings are considered SPAM and that further violation may result in action taken by eBay against your account.

Your cooperation is most appreciated.

Regards,

eBay SafeHarbor (safeharbor@ebay.com)

If in fact, it is considered Spam, to post items for auction on Ebay, in this UseNet newsgroup, then I will stop doing so. I didn't feel I was doing anything wrong here, and I've never had any official notice from any newsgroup monitor, etc.

We really need to clear the air on this once, and for all, because I'm not the only one doing this, and the real policy needs to be known by all.

Thanks,

Bill Crocker

They're biz-band freqs, which I think still require a license to use...
And I'm pretty sure I've seen a radio somewhere that included both those and
FRS, but you might wanna check-n-see if it's been illegally modified...

Possibly a GMRS (General Mobile Radio Service), radio. I think they share seven frequencies with FRS, and have seven additional ones for GMRS only. Typically they're 1, 2, or 5 watt. GMRS radios require a license, but no test of any kind. They are also intended for personal, non-business use, but some older license holders that use them for business are grandfathered in. The FCC will no longer grant a GMRS license for business use.

464.5500 and 467.7625 are not FRS frequencies; I doubt that they were in an
FRS radio. They are business band frequencies.

I was interested to see if anyone in California has had any luck with Uniden's BearTracker BCT-12 scanner? It's the one that looks like a radar detector. I don't care about real scanner features, I just want to know if it actually works in regards to picking up the CHP repeater signals.

Thanks!

Not sure what you mean? They state that "unsolicited commercial postings
are considered SPAM", but is my posting, as an individual, considered
"commercial"? I don't think so. Wouldn't "commercial" be someone that's
actually in the business to sell radios?

They make it clear that they (eBay), are responding to a complaint from
someone else...it's not their own complaint.

"eBay cannot judge or evaluate the Usenet post, but we have received a
complaint about your posting."

I searched UseNet, using Google;

http://groups.google.com/groups?q=ebay&hl=en&lr=&safe=off&meta=site%3Dgroups%26group%3Drec.radio.swap

It's obvious who hates eBay ads in newsgroups, but some are more civilized than others, when voiceing their opinions. And that seems to be the only substance to this, their opinions. Well they're entitled to their opinions, as I am to mine. I think it was Dirty Harry who once said; "Opinions are like assholes, everybody has one!" But I still see no evidence that there is in fact an actual UseNet policy against posting eBay auction notices in topic related newsgroups.

After I gather enough feedback, I will forward it all to eBay, and attempt to set their fears to rest.

In the meantime, I suppose I'd be expecting too much for the person who filed this complaint, to come forward, with an explaination??? Didn't think so...or they would have done that to begin with!

I would hardly call the rec.radio.swap forum as an ideal place to post scanner auctions. Amongst the _massive_ number of regular "radios", a scanner posting can go unnoticed. This is why I always post to the scanner groups as well. Perhaps if there was a rec.radio.scanner.swap, or a rec.radio.swap.scanner, things would be different. Until such a day and age, I will continue to post FA items on here when I have a relevant item up for auction. Granted this is rare in my case, as I don't go through scanners or accessories like water. I see no reason why a person shouldn't be able to, as there is not a significant enough number of posts to warrant such a "rule." I could see the problem if the forum were being over-run by such posts, but this is not the case. Therefore I stick by my opinion...

I just bought a BCT 12 on ebay for $61 and like it. I have a BCT 7 in the car as well but mostly have it tuned to local San Jose PD, so the highway alert is then turned off. I wanted to have a constant monitor on CHP so I got the BCT12.

It works well but it's not always 100% letting you know CHP is nearby. As it's designed to pick up the officer's handpack activity, there can be periods of no radio activity and the cops can be right on top of you. Not usually a problem as I keep to the speed limit, but when it goes off I immediately look at my speedometer. I hate spending my Saturdays in drivers school. It does work.

I miss not being able to see the frequency but the size is nice and fits well on the dashboard.

I am trying to find out the frequency of the mobile extender for California. The frequency that the BCT 12 highway alert system is looking at. If anyone knows please respond or email me.

Thanks

Kevin

Hi, I'm from Super Scanner World and want you to stop by my web site
and check out what we have for sale

FA: I have a scanner for auction please come bid on it.

What's the difference between those above statements?

One a commercial business trying to increase their sales
the other is an individual try to make a sale.

Both are trying to make money

I see no problem with either one, as long as there are "on topic" for
the group and not posted multiple times.

Just my "2 cents"

Thew AR5000 scans particularly poorly with ScanStar. See
http://www.scanstar.com/appnote3.htm

If you really insist on getting the AR5000, you should probably
check out the ARC5000 software at:
http://www.butel.nl/ar5000/5000.html

Monitoring Times has reviewed both radios -- perhaps you could
order reprints? See:
http://www.grove-ent.com/hmpgmt.html

Cheers!

> were in my list.

The radio you have is a business radio, set up with itinerant channels,
commonly called 'dot frequencies'. While these nominally require a license,
that legality is often ignored. For reference:

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125

Here's a "hot button" for someone like myself who's been on both sides of this issue - as a scanner "enthusiast" for over 30 years and as a Reserve officer. There are too many reasons NOT to be responding to / involving yourself in activity you monitor.
Ex: Did you know if you respond to a 459pc (alarm call) and park within a block or two you may detained and/or arrested?
How do the responding units know if you're a "lookout" for a burglar? Not a bright move!!!
Monitor all you want; assist ONLY in incidents in which you have professional training or skills-ie: traffic accidents or major scenes where your help is appreciated and NOT suspect.

> Doncha think?

No I don't. If you are so bothered about FA postings then use your
filter. I'll be more than happy to tutor you.

> Besides, that other post did make Ebay's policy on spam pretty clear......

Yes, concerning "commercial" spam.

There is no reason to bitch about FA posting unless you are a control
freak. Use your filter BD and you will never see another FA posts again.

Easy solution doncha think?

I need some advice. I own a Winradio 1000, which receives a lot of noise and interferences from my computer. I'm thinking of buying an Icom PCR1000, 'cause I've seen on the net that its performance is much better. Shall I sell the Winradio and buy an Icom?

Thanks in advance.

Greetings from sunny Spain.

It is simple to bastardise the exisiting one. if the rechargable batteries are shagged then remove the plastic covering snip the wires, get some bluetack, solder wire / tinfoil connect batteries rejoin the wires. it is not rocket science, just pretend u are mcguiver :) the batteries are only 4 X 1.5 volt stuck together.

now on the subject of BC 220XLT, i got one second hand, with no manual. The uniden site doesnt list this muther on its site, so does someone have access to on-line manual ??
also I am interested in getting Radio Station on the bugger, but am told this is impossible. true / false please let me know.

This "bitch" was meant regarding normal control through the keypad.

I am using actually three different programs (two for windows, one for
DOS)
to control the AR5000 with a computer and have not encountered problems so
far.

> I believe that one of these 2 is the right one but which one?

Well, all I can do is to provide you with enough information that you can
come to a decission.
I can't decide it for you. :-)

> I use ScanStar.

I do not know this program and therefore can't give you any hints how this
program might work
in conjunction with an AR5000. I am using e.g. BuTel software and
ScanControl for computer control.

So in essence, you are telling me that you have _never_ gone out and bought something spur of the moment, because you saw an ad on a news group, or in a newspaper, or in someone's sales flyer, even though you weren't really looking for what you bought at the time? Yea, I think everybody has at one point in there lives... Don't try to fool us... The same tactic applies here... Advertising apparently works... Or haven't you noticed how ads and commercials are taking over the world? You been living in the basement your whole life?

You may be right Bud...that's why I'm asking. However, it would appear the majority doesn't seem to be offended by it. But more, and more, we live in a world that allows it's rules to be policed, regulated, and changed by the minority.

It would put me in the business of selling a car. One's status
as a dealer or not is irrelevant as to whether one's posts can be
considered SPAM. What is releveant in determining whether a
message is SPAM is the attributes and/or frequency of the message
and to where it is posted.

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

well You will probably get the same interference from taht radio too. even a normal scanner. the winradio will pick it up workse though. Most RF comes from your monitor though. try shutting off your monitor and see if the RF goes away. If it does. then turn on your monitor again and change the refresh rate frequency. most of the time that will cure computer interference. sometimes not.

I agree to that. that isn't something you should do. People of asked me to go too these fires or car accidents. I tell them NO. the fore or police may see you at the first scene. then now at the second scene. it is definately not a coincidence and time to get fined. well taht is how they do it here. fine and or arrested. but where I moved to less then 15000 people. 1 main road. the coincidence is too often. you usually have to drive thru 3 scenes to get home. I just don't think it is right calling someone stupid for asking a question. and that scene i posted. It was myself they wanted. If I was in trouble anyways for something I didn't do why not call them up and say you heard yourself. saves the tax payers money for looking for you.

This would be difficult to tell without knowing some more information,
one possible way to find out is to visit the FCC http://www.fcc.gov/ Site and
go to the FCC ID Number part; enter the FCC ID found on the Radio and the
Product Registration will come up, listing Frequency Ranges for that unit.

Possibles to Scan are in the Business Service Bands:

151MHz to 157.620 MHz and
461MHz to 462.175 MHz and
463MHz to 467.925 MHz

These are mainly the voice sections of the Business Service Band.

There are other Radio Services for different activities; Tow Trucks, Forest
Products, Manufacturers, Bus and Trucking Co.s', Petroleum Co.s', Power and
Misc. Services.

A copy of Police Call will explain this nicely.

Source record: 65791

I have an Alinco DJ-X2 radio scanner to sell. It is in "Like New" condition and includes all of the accessories, instruction manual, and box that it comes with when it is new.

This is a very small and slim radio when used with it's internal Lithium-Ion battery.

It has continuous coverage from 500 kHz to 999.999 MHz, excluding the cellular band. No modifications have been made to this radio.

Read a review of the radio at http://www.strongsignals.net/htm/revx2.htm

I am asking $200 for it. The shipping price is negotiable, but UPS ground shipping to most of the United States would be about $10. I can accept a money order for payment or PayPal.

> So a garage-sale is a commercial biz?...
> BS.

Whether you sell something one-time only or sell things many times throughout the year, or whether you sell one item or you sell many items, you are carrying on business. Now, I've seen the terms "commercial" and "dealer" thrown around here. The concept people seem to be groping for here is that of a "for-profit enterprise", ie. an enterprise established with the expectation of profit, versus a hobby, ie. something done without the expectation of profit. What people seem to be asserting is that it is not OK for a for-profit enterprise to advertise in the newsgroup, while it is OK for someone carrying on a hobby to advertise in the newsgroup. The only problem with this is that one cannot always distinguish the hobbyists from the entrepreneurs. In addition, repeated messages re items for sale or auction from hobbyists can be annoying.

It seems OK for hobbyists to advertise their equipment in the newsgroups when it is something that would clearly be of interest to members of the newsgroup. Though, repeated messages should be frowned upon. However, if there is a sub-newsgroup established for the purpose of swapping or buying and selling equipment, then that is the newsgroup where the message should posted.

Putting something up for auction on Ebay and posting it to the (appropriate) newsgroup seems to present a borderline case. If people were interested in particular items for auction, they could easily check Ebay themselves. OTOH, some people are lazy and may wait until someone in the newsgroup points out a particular item for auction. In any case, if you choose to post items to the newsgroup which are for auction on Ebay, I think you should not repost the entire list of features, selling points, etc. but rather simply post *one* short message referring the reader to the particular Ebay posting -- that message should also contain the correct header, e.g. FA or FS.

Further, it seems OK if for-profit enterprises, in addition to, hobbyists, post messages to the newsgroup relating to rare or hard to find items, providing they follow similar guidelines to those above. However, for-profit enterprises should avoid making sales pitches, avoid including testimonials in their messages, and avoid long lists of detail concerning their product -- they should instead just provide a link. OTOH, for-profit enterprises should be encouraged to engage in technical discussions on the newsgroup but should not dominate the newsgroup.

Bill, I've been on usenet long before this group was created and obviously before ebay came along. There is no group policy regarding posting auction notices. Posting ON TOPIC, NONCOMMERCIAL auction items is absolutely no different than posting ON TOPIC, NONCOMMERCIAL For Sale messages. There is no difference in saying my friend is selling my old scanner for me, best price takes it, and posting an auction notice for your old scanner. Both are fine. If it begins with FA or FS people should know exactly what it is and skip it if they are not interested in buying something.

While the definition of 'commercial' includes the sale or trade of anything for any reason (e.g. commerce), in the online community there is a distinction between personal/private and commercial sales. Ebay says that "unsolicited commercial postings are considered SPAM" If you use the broad definition of 'commercial' then they are saying that all For Sale and For Trade messages in any e-mailing or usenet group is considered SPAM. This is obviously not true since many groups/lists welcome For Sale messages. This leaves us to conclude that Ebay is referring to the 'online' definition of commercial which I will define as selling or trading stuff on a regular basis for the purpose contributing to ones livelihood (i.e. selling stuff for a profit).

Don't let a few jerks rattle you Bill. Tell Ebay FA notices are welcome where you posted them.

>with the same frequencies?

Yes, they come with the following:

1 464.5000 Brown
2 464.5500 Yellow
3 467.7625 J
4 467.8125 K
5 467.8500 Silver Star
6 467.8750 Gold Star
7 467.9000 Red Star
8 467.9250 Blue Star

The notes at the end of each Frequency is as standard throughout the US for the
Business Bands.

Called DOT/STAR Frequencies.

The Spirit GT and GT+ look like FRS Units but use different Frequencies.

Hope this helps,

In my town having a garage sale more than three times a year means that you are in business. The city has hired a person to scan the Garage Sale ads in the newspaper and keep a log. If you advertise your garage sale more than three times a year, then the city considers you to be in business and can give you a fine for violating a zoning ordinance.

The howling speaker could also be caused by something that has fallen into
the speaker cone and is simply vibrating - a piece of plastic,, circuit
board or component,, or whatever.. OR a loose nut or speaker clamp on the
chassis or speaker grille... It only takes a few hairs widths of a gap.
Maybe te speaker is knackered...

3568. Re: Speech/Frequency Inversion Descrambling

I have to ask:

What does this have to do with scanning? Are you saying I can scan some speech inversion and convert it? If you are, give me more details, because right now you have told me nothing. Is this cordless inversion or some other kind?

How do I know what this is and why do I want to know?

I have already went to your site and learned nothing, got you downloads and still have nothing. You need to give more information about this stuff.

that person always spams all the radio groups with his product. what it does is it un inverts speech inverted voices. it is a very small circuit that is very expensive. could just use freeware invert or invert2 to do the same thing if you had a laptop or a computer nearby. There are other easy ways too.

easiest way is to transmit by your scanner. or even get a frequency counter
and put it beside the radio and transmit. frequency counter will tell you
the frequency right away.

> No you don't what?... As-in unable to search Ebay yourself?

I don't go to E-bay everyday to search for radios so I appreciate it when folks alert me on this NG that they are selling something there. Ever heard of impulse buying? DOH!

Now, you have spent far more time and keystroke crying about the people not doing it the "BD way" then it would have taken to turn on a filter and never see a FA post again.

But NO! BD has to have it his way!

BTW, learn the meaning of spamming would you BD? Calling a FA post in r.r.s. spam is only topped as the sign of a naive Internet user by somebody who says they are going to turn something they don't like in a newsgroup over to a lawyer. ROFLMAO!

What are you defining? Business? My dictionary has a real long
list of definitions. In any case, the last phrase in your
definition says "usually economic dealings" -- yep, that is
what's going on when yuu sell something!

Was this post meant as a troll? It is an utterly absurd remark! A person is not "in the business" of selling anything if they are disposing of their own surplus or unwanted equipment. You are "in the business" of selling stuff if you _regularly_ acquire things _for the purpose of resale_ and so offer them, whether you characterize them as from your collection or not. Let's not obscure the real issue here!

Sorry, I disagree. The issue was distinguishing someone who
sells for a living versus someone who does not. Take the
card/comic collector. He regularly acquires things and regularly
sells things -- it is difficult to distinguish him from a
"dealer". But he surely does business.

Why is it that everytime "business" is mentioned, someone
rephrases it to "commercial business"? You do not have to
establish a commercial organization to do business.

this is my 2 cents...
cent #1...
I am aware that if the group name ends in ".forsale" or something similar, I
that group would be for just that. and if a group does not contain
".forsale" or ".marketplace" or whatever, then the group is intended for
disscussion only, and for sale or auction postings are inappropriate. The
group name says it all.
cent #2...
auction postings - If I want to buy something off of ebay, I would go to the
ebay site and search for them there. I would NOT think of looking at the
newsgroups. When I do see the auction postings there anyways, I just ignore
them, as I would already be on ebay if I were looking for that item.

I used to live a few blocks away from some a**hole who had a
"lawn sale" every weekend, not including the winter. I felt
sorry for his neighbors. It's not the fact that he's making a
living from it that's annoying, rather, it's the fact that you
had to see all the ugly crap in front of his house every time you
passed by. It's similar with the newsgroup -- the odd FA/FS
posting is OK but repeated FA/FS posts can be too much.

So, if I buy my scanner for $300, use it for a year and sell it for $200, how much money did I make? If i really got into it and did this a lot, how long could I stay in business?

I would venture to say that a significant majority of FS/FA's in this ng don't make a profit which is the first order of business for a "commercial' enterprise.

Would everyone feel better if I just let everyone send me an e-mail and I'll repost it as "a friend has a scanner for sale at E-bay; however, I won't be making a cent from the sale?" That would eliminate the "commercial" complaint since I posted the E-mail.

BTW, using ham radio for commercial purposes is illegal, but selling an individual piece of ham equipment on ham frequencies is not. Are you guys more uptight than hams?

God, I hope not.

Has anyone heard much about what new equipment
that will be showing up at Dayton next week?

The one thing that I have heard is that the equipment
manufacturers feel that mid range equipment is not selling.
Therefore equipment will be priced below $1000 or above
$2000.

Look up your company on the ULS. Go to the search page from www.fcc.gov and in the left column you will see a wireless communications search. You can look up your company name and you may get lucky and see the license and get the frequency.

So, do you shop at Wal-Mart, or Kmart, or ANY store for that matter the publishes a sales flyer? Yes, then you are guilty as charged in my previous letter... I would be quite amazed if you somehow managed to shop only at places that don't advertise anything, as in this day and age there is NO such place...

Based upon your response, I can assume that you would also feel that the Wal-Mart/Kmart/Target ad that shows up in your local paper is SPAM, as it's a form of advertisement just as posting a FA ad is. Go figure. Where are the laws these days regarding such things? I can't believe that they would let such indecent and malicious things go on... How about those TV commercials.. Damn things, must have forgotten to include a SPAM law against them as well... Oh shit, then there are all those massive bulletin boards along the road side... How many other forms of SPAM can we come up with? Why don't we all just go and send petitions to Congress and get it all banned, then we will never have to look at another sales flyer, ad, FA post, or TV commercial (Oops, I meant piece of SPAM) again... What ever....

I'm done with this ridiculous discussion. I stand by my opinion, as you have, in my eyes, failed to provide adequate proof to your claims and/or views, as to why I should feel the same way you do. I wish you well on your journey to get FA posts removed from the newsgroup, but until such time I will continue to post them as the need arises...

Good day!

Michael:

Here is a direct quote, from the original message I received from eBay, which is why the inclusion of the word "commercial" comes into the picture:

"We would like to remind you that unsolicited commercial postings are considered SPAM and that further violation may result in action taken by eBay against your account. "

The way I read this, they are referring to someone who is NOT the casual hobbyist, or radio enthusiast, that sells his personal radio equipment occasionally.

FOR SALE:

Uniden Bearcat BC245-XLT Trunktracker-II Hand-Held Scanner

TrunkTracking-II technology. When the service you are listening to jumps frequency, the BC-245 has the ability to follow the signal. You won't miss any of the action. Even copies Motorola and EDACS simultaneously. This scanner offers 12 bands and a 300 channel memory. Comes with "TWO" NiCad rechargeable battery packs! AC adapter/charger, and OPTIONAL external stand-alone charging tray, that allows you to charge a battery pack out of the radio! This allows you to continue to use the radio on one battery pack, while your charging the other! Flex BNC antenna, belt clip, earphone and special PC serial cable. This has the latest firmware, the resolved the delay issue while scanning between trunked, and conventional systems at the same time!

Excellent condition, can't tell it from new! Includes box, manuals, etc.

ONLY: $150.00 shipped!

Thanks,
Bill Crocker

Although the kid did a bad thing...I think the people who left the system un-secured, to allow this to happen, are the ones who should really be in serious trouble! The kid just took advantage of the opportunity they provided...which means the same opportunity was made available to serious criminals! They should feel very fortunate nothing more serious happened!

From http://www.strongsignals.net

Littleton CO
Cops say teen concocted radio calls

Suspected hacker also accused of pretending to be officer, taking cops off emergencies

By Brian D. Crecente, News Staff Writer

A 16-year-old boy using a handheld radio and a computer allegedly sent Denver police cruisers and a helicopter to fake emergencies and called officers off legitimate 911 calls for more than a month before getting caught.
Police said Thursday that the teen managed to hack into the department's computer-controlled radio system, program his radio to transmit on the department's frequency from his Southwest Denver home and then took on the alias of Jerry Martinez, a ficticious Denver police officer.

Division Chief Steve Cooper said the teen talked to dispatch pretending to be the officer more than a dozen times from March to May, including a March 19 call for backup that sent patrol cars speeding with lights and sirens to the scene of a non-existent crash.

About 8:30 p.m., the teen allegedly called police dispatch on his radio reporting a hit-and-run accident near West Jewell Avenue and South Sheridan Boulevard. He reportedly told the dispatcher that he was following the suspect at a high rate of speed. The dispatcher sent patrol cars to the area.

Detectives found their suspect with the help of the Federal Communications Commission and arrested him May 1.

Cooper said the teen was charged with a dozen felony and a dozen misdeameanor crimes involving wire tapping, eavesdropping and telecomminication fraud. He is being held at the Gilliam Youth Services Center.

Deputy Police Chief of Operations Dave Abrams said it's hard to estimate how much the teen may have cost the city in wasted manpower and equipment.

The police department plans to have experts review the security of their emergency radio system and will tell other departments across the country of the possible weakness in the system.

"This is an officer safety issue, a public safety issue," he said. "You can't have someone out there broadcasting emergency calls; the potential is

frightening. This kid had the ability to wreak havoc with our communications system."

The teenager was not satisfied with just the radio ruse, police said.

On April 6, he allegedly took to the streets of Littleton dressed in a Denver police jacket and driving a truck equipped with emergency lights and his radio.

Angered by another driver, the teen reportedly attempted to pull the man over. The man refused, drove to his home and had a neighbor call police.

The teen first told Littleton police he was an off-duty officer, but later burst into tears and admitted that he had made the story up, according to Littleton police reports.

He was issued a summons for impersonating a peace officer, false reporting to authorities and unauthorized use of emergency vehicle lights.

On April 26, the teen allegedly called dispatch requesting information on three license plates, but this time police were ready for him.

Dispatchers kept him on the radio for an hour and a half, telling him that one of the plates he requested came back to a wanted person who was armed and dangerous. An FCC agent used special equipment to track the broadcast back to the teen's house during the conversation.

The agent spotted the teen standing in his front yard, talking into a radio. The agent confiscated nine radios from the home.

The next day, a police informant called the teen and asked him to reprogram the informant's radio so he could listen to Denver police and transmit on their frequency.

On May 1, the teen brought the reprogrammed radio to the informant's house and was arrested. Police found a computer and other radio equipment in the basement of his grandmother's house.

Cooper said the teen's alleged penchant for talking to the helicopter when it was over his neighborhood and his mispronunciation of other officers' names tipped dispatchers off that they were dealing with an intruder.

Police have not determined how the teen allegedly hacked into their radio system. The police department's emergency radio system uses two sets of security identification codes and a computer to prevent unauthorized access.

"We have some guesses how he did it, but we're not sure," said Myron Kissinger, electronics technician supervisor for the police department's electronic engineering bureau.

In any case, the case gave police a scare.

"He had the potential for causing a lot of problems," Kissinger said. "As time went on, there is always the possibility that he would become more brazen."

Echelon Fact Finders Snubbed

By Juliana Gruenwald, Interactive Week
May 10, 2001 4:51 PM ET

A delegation from the European Parliament investigating the existence and impact of a global satellite surveillance system operated by the United States and other English-speaking allies abruptly ended a fact-finding visit to Washington, D.C., Thursday, after some Bush administration officials refused to meet with the group.

Leaders of the European Parliament's Temporary Committee on Echelon, the name of the alleged surveillance system, said they had meetings planned with the State Department and Commerce Department's Advocacy Center, an office that helps U.S. companies win foreign contracts, that were abruptly cancelled without a "satisfactory" explanation. While no firm meetings were set up, committee officials said Central Intelligence Agency and National Security Agency officials also had indicated ahead of time that they may be willing to meet with the delegation, but refused to do so, saying such a meeting would be "inappropriate," the committee's chairman Carlos Coelho said.

Coelho said during a news conference that he was "concerned and dismayed" by the refusal of the agencies to meet with the delegation. In a statement made during a meeting with House Intelligence Committee leaders on Wednesday, Coelho said the U.S. officials' refusal to meet with the delegation "can only increase the suspicion that there is indeed something to hide." The committee also met with officials from the Justice Department.

Coelho said he wanted to discuss with the national security officials allegations that the United States has used the Echelon system, which is allegedly being run in cooperation with Britain, Canada, Australia and New Zealand, to engage in economic espionage aimed at helping U.S. companies.

The committee is expected to release a report on its investigation at the end of the month, and the full parliament, the legislative branch of the European Union, may discuss the panel's recommendations in September.

"Given the nature of the allegations which have been made about Echelon, economic espionage and so on, it was extremely important that the United States authorities had the opportunity to respond," Coelho said.

In particular, the committee leaders said they had documents showing that the CIA has met with the Commerce Department's Advocacy Center and wanted to know why a spy agency would meet with an office set up to help U.S. businesses compete globally.

Gerhard Schmid, the parliament member responsible for developing the committee's report on the investigation, said there may be a legitimate reason for why the CIA was involved with the center, but questioned "why can't such a debate take place."

Both NSA and CIA officials have denied that the United States is engaged in industrial espionage. And even the European Parliament officials acknowledged that the committee has not substantiated any of the allegations.

"I recognize that it is standard practice for some countries to use their intelligence services to conduct economic espionage, but that is not the policy or practice of the United States," George Tenet, the director of central intelligence, testified last year before the House Intelligence Committee.

A CIA spokeswoman said the agency never made any promises that it would meet with the European Parliament delegation and that any information it could provide to them has already been stated publicly. She added when asked about whether the CIA met with the officials from the Advocacy Center that the CIA meets with different agencies for a variety of reasons and has stated "clearly" that it does not engage in economic espionage to provide unfair advantage for U.S. companies.

A NSA spokeswoman gave a similar response, saying, "We respectfully declined the EU request. We believe our director's testimony before the U.S. intelligence oversight committees last year provides a synopsis of the NSA's position on the issues at hand."

The United States has never formally acknowledged the existence of Echelon, a global system for intercepting satellite communications. But both Coelho and Schmid said they have no doubt that it does exist.

"Yes it exists and we can prove it," Schmid said. "It can have good purposes and can be misused."

Schmid pointed to the existence of special antennas on U.S. military bases around the world that are only used, he claims, for intercepting satellite communications.

Schmid was asked why the committee is so concerned given that it has been widely known for years that countries intercept satellite communications. He responded that this may be true but that citizens in countries that conduct such activities are often protected by their own constitutions, but there is nothing to protect them against the activities of other countries.

When asked what can be done about the situation, Schmid said he would recommend that EU countries encourage businesses to do more to protect their communications through the use of encryption and other means. He also suggested that the World Trade Organization adopt a requirement that members agree not to spy against foreign companies.

Well he could be on line using a cable modem, which most road runner services are, like you use?. He could be accessing through a network at his job until his phone is in. He could be using a satellite connection. He could be using a friends account to read some of the newsgroups. He might go to the library to read some newsgroups.

Anybody have any other suggestions for Bud

A very good point. They ought to lock the kid up for about 90 days - a FULL
90 days - in juvenile detention (assuming this is his first brush with the law);
and FIRE the individuals responsible for setting up and maintaining system
security!

Icom or Kachina, IMHO, if you're looking for a better radio; but the computer noise may be a problem regardless which brand radio. Why not get a tabletop that also has PC-control?

Hi there,
I am selling a Pro-94 1000 channel hand held Trunk Tracker,
29-1300 Mhz
The radio is in very good condition about a 8 1/2 to 9 out of 10
cosmetically
and works great!
I do not have the manual for it but can be downloaded off the net.
I am asking $120 shipped
Shipped from WA. State.
any questions please e-mail me directly at rusty@dccnet.com
Thanks-Russ

3651. Q: 2 ants into 780 @ same time?

Newsgroup: rec.radio.scanner
Date: 2001-05-13 16:18:07 UTC
From: tede911@aol.com
Message-ID: <20010513121807.20990.00002193@ng-df1.aol.com>
Source record: 65640

Hi all,

I am hoping to replace the 760 in the 9-1-1 Center with a 780 in the coming months.
At present, we are running an all-band scanner antenna on the roof of the station with an exceptionally long coax lead of Belden RG8 (approx 75'). It is adequate on VHF/UHF for our purposes but the loss on the 800Mhz band is so much that reception is quite poor even for the adjacent Cambridge system, as well as the MSP- A/H Troop system.

What I'd like to do is keep the all band in place but add a cellphone antenna (with the appropriate connectors) with a much shorter coax lead (8-10'). Is it possible to have two antennas feeding into one radio and is what I suggest feasible as far as better 800Mhz reception?

Ted P.
Belmont, MA, 9-1-1

The PRO-94A can track trunked and conventional systems simultaneously, whereas the original PRO-94 could only monitor trunked or conventional, but not both at the same time.

All versions of the PRO-92 can track trunked and conventional system simultaneously.

I think that this feature is what the person that made the original post might have been looking for.

It doesn't sound like a good solution, considering your requirements are not just for a hobby!

Why not pull the old antenna, and install a new Diamond wide-band discone antenna, and high-grade, low-loss coax?

Bill Crocker

Bill, I do have a cable that I use for my Icom R-2 and my Yaesu VR-500,
would that work with your software? I'd like to give it a try. Thanks, Sal

Try this suggestion taken from.....
http://strongsignals.net/msgboard/messages/19572.html

"Try holding down the MAN,SCN,PRI and SRCH keys while turning the scanner
on. The display should show CLRING for a few seconds while it resets."

If your HS200 is one that is PC programmable, it should have a standard DB9 RS232 serial port on the back...which will work with a standard serial cable. The HS200 did not interface through the headphone jack, like many others do.

So, if you are driving down the Interstate and see someone who is
obviously drunk running off both sides of the road, is it ok to call
the highway patrol? If you have a scanner in your car (in a state
where it's still legal) and hear a description of the getaway car in a
bank robbery only to see that the car is in front of you, is it
illegal to call the police on your cell phone and tell them?

It only becomes illegal when you leave the role of public citizen and
begin to actively engage in law enforcement. Following a drunk
driver, of a bank robber, to aid police is not illegal in my state.
However, engaging in high speed chases is.

3665. Car mount for scanner?

Newsgroup: rec.radio.scanner
Date: 2001-05-13 19:47:54 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <KxBL6.23657$V5.4936728@news1.rdc1.mi.home.com>
Source record: 65655

Does anyone manufacture car mounts for scanner radios? I'm thinking of putting one of my BC780-XLT's in the car. The best place looks like it might be on the floor, over the transmission hump. I drive a 97 Grand Marquis. Any suggestions?

Thanks,
Bill Crocker

The Pro 94 is only capable of scanning either normal frequencies or trunked frequencies not both at the same time, ie you cannot search regular memories AND trunked memories linked together, on the Pro 94A you can.
Seems the guy knows exactly what he is after pro92/94A

So what, this is about an FA ad in the NG. Not a spam. Use your kill filter or have an adult help you.

> And if you weren't a dumb@$$ you'd know there's a big difference between
> spamming and normal advertising..

Keep your family names out of it BD. If you were so bright you would know how to use a kill file. DOH!

> Now, let me ask you... Would you
> appreciate salespeople calling you 5-6x a day trying to sell you something
> over the phone?

No as on the internet I would punch in a few commands and that sales number would not ring through to me again. You have a simpler tool at hand, a kill filter, but you seem to feel it is better to spend hours whineing than a minute putting FA in you kill filter and never seeing a FA again.

> Why is it that you choose to compare email spam to ads in
> the newspaper or on tv instead?... No answer, huh?

Why is it you choose to spen hours demanding NG's conform to BD's rules rather than add FA to your kill filter?....No answer, huh? DOH!

Threads evolve, glenn, and this one was about spam... How many times do I have to post previous quotes for you?...
I replied to "So in essence, you are telling me that you have _never_ gone out and bought something spur of the moment, because you saw an ad on a news group, or in a newspaper, or in someone's sales flyer, even though you weren't really looking for what you bought at the time?"
How did that had anything at all to do with FA msgs, glenn?...

And you rarely get the same sales-person calling or posting spam time-n-time-again, so.. It's pretty danged hard to "punch in a few commands" to get rid of it, as I'm sure you are fully aware of.

Hey Bruce

Just to answer your question. Council Bluffs medics and the hospitals
communicate via cellular phone. You will not here them talk to each
other on the scanner.

I was a paramedic student and rode with Omaha and Council Bluffs fire
department ambulances. I also have friends on both departments. This
is how I know the information just so you don't think I'm a quack.
Also, if you didn't know, Omaha uses 462.950 for communication to the
hospitals.

Yes dummy it might help. There are still Seatle freq lists that don't reflect Seattle going to a trunk system. If he uses a search engine this will give him a heads up to ignore those.

Are you stalking me BD? I am still wating to hear from your lawyer dipstick. Remeber you were going to get the legal after me. ROFLMAO. Go whine about FA's and quit stalking me.

Well, I can't comment about the HTML, as it doesn't bother me, I can see it just fine, though I know that it's not supposed to be used...

In any case, he could be online the same way I am.. I have no phone... But I'm here aren't I? Got me a cable modem... No phone line required... Go figure... Not that I don't have a phone, I have a PCS phone. Don't own a regular phone, as it is not only more convenient to use my PCS, but it's also cheaper than the regular, strapped to the house and go nowhere, phone... What a world we live in...

Correct me if am wrong, yes your right.
Then explain reason 'why you would get only one side of the conversation'
and not both
like half duplex then full duplex.

You can key in, like say, 162.55 MHz, you may or may not get that frequency programmed into that location. If, by some miracle, it does store it properly, you can't receive any signal. And I know that is a valid NOAA Weather Radio frequency in my area.

This scanner HAS operated properly since I've had it. It just didn't work one day after it had sat for a couple of years without use.

Oh, I did solder EVERY connection on the mainboard.

Any ideas will be appreciated!

Are you familiar with how repeaters normally work?
Then there's also many other types of radios, besides cell/cordless phones, that use two different frequencies for non-stop transmitting and recieving...
And there's even more possibilities besides those.. Maybe one transmitter's two far away far his little antenna and he's actually simply needing a better/taller antenna?
"As I said...." ;) There's lots of other possibilities, atleast until he, himself, explains what he's actually needing........

3707. Scanner Frequency Logger - Needs Webmasters

Newsgroup: rec.radio.scanner
Date: 2001-05-14 17:07:26 UTC
From: GM <freqlogger@yahoo.co.uk>
Message-ID: <ihUL6.531$zq2.42715@news1.cableinet.net>
Source record: 65695

Scanner Frequency Logger is looking for webmasters who would be willing to place a link to our site on there site. In return we would do the same.

We are also looking for webmasters who have frequency lists, who would like to have some frequency lists on there site in Scanner Frequency Logger format, which could then be downloaded and imported into the program by the scanning community.

If anyone thinks they can help contact me: Freqlogger@yahoo.co.uk
Visit the site to see the software:
Http://www.freqlogger.pwp.blueyonder.co.uk

(Due to how busy i have been, you will have to download full v1.1 then v1.2 upgrade. That way import / export will work correctly)

Thankyou for reading

G. Mitchell

yep, and when he listens to the input of the repeater. you get the same thing. as I posted above. lol. cells and cordless's only. I thought that was the best.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists. On Ontario Unlisted Frequency Guide you will find lists of Ontario radio frequencies that are not listed on any other web page, published in any scanner book (Haruteq or Scantrix) or listed in the government frequency list (Industy Canada's TAFL). The Ontario Unlisted Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other abou anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changed I made to the Ontario Unlisted Frequency Guide web page.

Ontario Unlisted Frequency Guide - http://www.interlog.com/~mstone/

What if he is listening to the input?
Most scanner-listeners, I'd be willing to bet, aren't familiar with how repeaters work and/or how to find the output-freq of one they've found someone talking to...
He simply states that he wants to hear both sides of the conversation...
There are many more different reasons, besides listening to cell and cordless phones, for him to be hearing only one side..

Just a suggestion, if you are not a liscensed amateur radio operator,
then in many states having the scanner installed in your car is illegal,
even if you aren't tuned into the police/fire, even if you don't have it
on. you may want to check into it, and/or get a ham liscense.

Chris:
"Frequency hopping" is when your listening to a frequency and it hops to another frequency eg.. when one cell phone jumps from on cell tower to cell another cell tower.
the only thing you can do is use direct scan and search for that frequency again.

Note. Cell phones are illegal to listen to and I was just using that as an example, although I think it would be neat to listen to a couple of conversations.

In such cases, the government doesn't take it upon themselves to
unilaterally decide too many garage sales are a bad thing. Local
politicians are forced to take action after listening to alot of
irate homeowners. Last time I checked, politicians should be
acting in the interest of there constituents.

It's possible, but I've not seen any mention of it either. If it could be done, it would most likely be obtained from Uniden, as a download, that you would execute on your PC, and upload to the radio via the serial port. This is how most other flash upgradeable ROMs are done, i.e.; modems.

Frequency hopping for tactical military communication refers to a
method of spread spectrum communications, not cell site switching.
There are plenty of references on the net. Use your favorite search
engine...

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire

engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a

personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. http://www.grove-ent.com

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC780XLT, BC895XLT, BC245XLT, SC200, and Radio Shack PRO-92 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises http://www.grove-ent.com for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's

book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine, published by Grove Enterprises, http://www.grove-ent.com

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't

interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large

Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated

circuits. The radio must have been made after the most recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature

(logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two

BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, http://www.grove-ent.com
but views expressed in this article are his own.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)

25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated April 4, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

MAY 2001

May 6 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

May 6 (Sun) - Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds (intersection of Suydam and Gletty roads). 8AM - 1PM. 3 indoor buildings. Admission $6.00. No VEC testing. Talk-in on 146.730/- or 146.520. Info: W9ICU at (815)895-3310, email w9icu@home.com. http://tbcnet.com/~jleonard/hamfest.htm (small to mid-sized hamfest. Nice drive in the country. Good restrooms. -AJ9S)

May 27 (Sun): Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell, Chicago, IL. 8 AM - 2 PM. setup at 6 AM. Indoor/outdoor flea market. Free parking. Tickets $5 at the door. Outdoor fleamarket space is free. Indoor table space is $1.50/ft. Info: George (773)545-3622 or Dean (708)331-7764 or write to CARC, PO BOX 410535, Chicago, IL 60641-0535.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE test-

ing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com. Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Bal-

lard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 14 - 16: Peoria, IL - Peoria Superfest 2001, Peoria Area Amateur Radio Club. Exposition Gardens, Peoria, Illinois. Amateur Radio, Computer and Electronics Show. Friday Flea Market Preview--3 PM until dark; Live Music Saturday night in the South Garden Pavilion; FCC Testing Sunday 10 AM until 1 PM; Gates open 3 PM Friday and 6 AM Saturday and Sunday. Commercial buildings open Saturday 8AM until 4:30 PM and Sunday 8 AM until 3 PM. Advance tickets $5 with two stubs; $7 at gate with one stub--all tickets good for the weekend. Outdoor fleamarket space can be reserved in advance for $5 plus $5 for each admission ticket. Space and admission tickets are good for the entire weekend. Setup: Outdoor -- Friday 10 AM and 6 AM Saturday and Sunday. Indoor Commercial Vendors -- on Friday 2PM until 9 PM (setup only), = Saturday 6:30 AM and Sunday 7:30 AM. Talk-in: 147.075+. For more info, see http://www.w9uvi.org ; e-mail for tickets and space reservations to w9uvi@arrl.net ; USPS mail to Peoria Superfest, PO Box 3508, Peoria, IL. 61612-3508.

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Admission $8, good both days. Ladies program - Arts and crafts. Grounds open Thursday at noon. Flea Market open both days at 6 AM. Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM. VEC testing. Free camping and parking. Talk-n on 146.16/76 MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org. Tel: 630-628-1501 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. No tailgating. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below).
Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fair-grounds, County Farm & Manchester Rds., Wheaton, IL. Admis-sion is $6. for adults and children under 12 get in free. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features com-puters, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gur-nee Illinois. For info, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 2001 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024. Grove Enterprises http://www.grove-ent.com occasionally sells manuals, too.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006

MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable
Aug 2000 - Phone patches; Identifying scanner crystals
Sep 2000 - Radio Shack PRO-2067 trunk tracking mobile scanner
Oct 2000 - ICOM IC-R3 portable wide band scanner
Nov 2000 - AOR AR3000A wide band receiver
Dec 2000 - Alinco DJ-X2T portable scanner
Jan 2001 - BUTEL ARC2 Software for the ICOM IC-R2
Feb 2001 - RT Systems ADMS-3 Software for the Yaesu VR-500
Mar 2001 - Uniden BC780XLT Trunk Tracker III
Apr 2001 - AOR AR-8600 Wide Coverage Receiver

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. http://www.grove-ent.com I don't
receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.

Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features

than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies

found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search

limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117

VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather

alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There

three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility

not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

Appreciate the heads-up! However, I have a permit from the Michigan State Police, that allows me to have a scanner, tuned to law enforcement frequencies, in my car.

Thanks,
Bill Crocker

Lucky you! When the government decides to ban mobile scanners outright and begin confiscation, guess where they will look first?

Go to Scannerstuff.com. Order the Southwest frequency directory (6th edition).
Dan Rollman, the editor, has done a great job of putting this book together.
LV freqs were updated as of June 00. I collected and verified the LV freqs.
I do know that Henderson and the NV Highway patrol have changed, and are not
correct in the book. I hope to get with my contacts for that area this summer
to correct this.

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

Just got this back from my ex but all she could find was the 540, no charger, but i do have an infrared unit (Actisys IR) and driver disk to go with it. As i cant see myself getting round to buying a charger so will swap for a scanner.
It is in good working order and at the moment it is charged up.
Go here to view and read up on it.

NiMh's do not need to be "run down" before charging. Charge them
ANYTIME, regardless of how much charge they have. When you notice a
decrease in lasting power they need to be "conditioned", the new
chargers have a conditioning feature. like the MAHA C204F.

Most all local police/sheriff departments have ways of funding their anti-drug squads. Douglas County Sheriff's Office (Georgia) did quite well on their haul!

3750. 43.385 mhz Help

Newsgroup: rec.radio.scanner
Date: 2001-05-15 22:22:52 UTC
From: LoP <lop@lop.net>
Message-ID: <3B01AC16.99192336@lop.net>
Source record: 65589

Hi All,, I have made several contacts with WEWN a christian station
out of Birmingham,AL on 43.385 mhz...Start 21:48 UTC,,,,5:48
EDT.....Stop 21:55 UTC,,,5:55 EDT .
They TX on 9975, 15375, 7425 9385 ect. there is more but the one i heard
it on was 13615 according to the on air I.D. ..
I live in the Detroit Area and if anyone else in the newsgroups would
tune in to 43.385 +- 2MHz to see what they get...I m hoping to get
both sides someone from Detroit and the US or Canada...

Please help and repost with the station you get and what freq. its
TXing on...Thanks for all yor help...

Jake

Cleaning out my shop.
I have a J.I.L.SX-400 scanner & the seperate rf up converter for the sx400.
The shortwave converter has a range of 100k-30mhz.
Both come with owners manuals & the scanner has a copy of the shop manual.
Any interest?
I'm located in central NJ
e-mail me directly if you have any questions.
Regards
Ed Ledner

3756. FS: Motorola radios and stuff

Newsgroup: rec.radio.scanner
Date: 2001-05-16 05:57:49 UTC
From: jayg359@aol.comNOSPAM
Message-ID: <20010516015749.16879.00006497@ng-fo1.aol.com>
Source record: 65595

I have the following radios and equipment for sale. Prices are listed, but serious offers considered! I NEED CASH!! Please email me directly.

13-MOTOROLA HT1000 16 CHANNEL RADIOS UHF $ 325.00 ea
(please note: These were all taken as a trade-in - Some are 2 ch converted to 16 channels. First buyers get real 16 ch radios.)

8-MOTOROLA SPARE BATTERIES HT1000 $ 20.00 ea

1-MOTOROLA GP300/P110 6 GANG RAPID CHARGER NEW $ 250.00

2-MOTOROLA P10 1 CHANNEL VHF RADIOS W/CHARGERS BUT NO POWER SUPPLIES $ 150.00

1-MOTOROLA 6-GANG P200 RAPID CHARGER $ 250.00

4-MOTOROLA P200 RADIOS UHF W/SPEAKER MICS $ 200 ea

3 - MOTOROLA P200 RADIOS VHF (No batterys) $ 125 ea

2 - MOTOROLA GP350 VHF 16 CHANNEL $ 300 ea

1 - MOTOROLA GP350 SPEAKER MIC $ 40.00

1 - MOTOROLA GM300 UHF 16 CHANNEL 40 WATT $ 275.00
This radio has a minor problem - I believe it needs a good tuning, but dont know enough to guarantee anything - No Mic or 16 pin connector. Radio only.

All equipment has been tested and is in good working order, but as with all electronics, is sold AS-IS! Paypal accepted and suggested, but will take USPS money orders.

Thanks for looking!

If you confiscated all the crook's property here in Pettis County
Missouri, all the attorneys, judges, and law enforcement would have
nothing left. Confiscate from themselves? HAH!!

A couple of years ago, a local fellow filed a federal RICOH charge
against 77 local judges, attorneys, LE officers for the amount of $485
mil. Shortly after, he was arrested on a local city charge, and this is
true, was held in Leavenworth Federal Prison! Really!! The case was
dismissed, but NONE of the 77 named defendents has file a slander or
libel charge. Guess they don't want to stand up in court and let the
truth come out....
Ask any 15 yr old kid who the drug bosses are around here, and they
won't hesitate to tell you.

I guess what I am saying is--QUESTION AUTHORITY!!!

>
> >Most all local police/sheriff departments have ways of funding their
> >anti-drug squads. Douglas County Sheriff's Office (Georgia) did quite
> >well on their haul!

The local LE has their own meth labs.

> Glad to hear it. EVERY police/sheriff department should do this. Confiscate
> every piece of property these criminals have. Then, auction it on eBay and use
> the proceeds to benefit the department.

Yeah, roll over and play dead, let LE trash Constitutional rights in the
name of the so called "drug war". It's proven rehab and education is the
way to go, but LE/Attorneys/Judges won't make no money off of that, so
that won't ever happen.

I'll take a longshot guess that you're hearing a tag team of speed
enforcement
cops - one guy sits with the radar on traffic approaching, while the second
sits
further up the road awaiting word from him if an approaching car is
exceeding
the limit so he can barrel out and nab him. This sounds like the first
stationary
guy is advising the second that the cars approaching aren't exceeding the
limit.

Most likely if you are Scanning Police/Highway Patrol Frequencies it is a Speed Trap, this is most likely one Officer telling the Chase Cars that the car in question is under the speed limit.

Just my opinion though,

What is the Frequency/Your Location?

Phone companies have been multiplexing audio channels ever since the vacuum tube became available. Probably for some 80 years! While there may be some old analog multiplex systems around, the phone companies have been using digitally multiplexed systems for probably 30 years.

Judging from what I've heard in the past (in Illinois)....

Speeding over could be 15-30 miles over the speed limit. (higher ticket)
Speeding under would be under 15 miles over (does that make sense?)

Its also used as theft under/theft over ($500)

I noticed that a number of police departments have CRT units in thier police cars that they use to access information. What mode of data is used, and do you know where to obtain a schematic to build a decoder?

Thanks,

Reggie

P.S.

please remove the x at the start of my email address to reply.

3781. Antenna for vr-120 ?

Newsgroup: rec.radio.scanner

Hello all...

My first day with my new Yaesu VR-120 has been a bit disappointing. I am new to scanning and I am primarily interested (so far!) in the aviation band. With the stock antenna, I seem to have a range of 2-3 miles at best!
Can anyone recommend a good antenna for this range of frequencies?

Thanks,

Peter S.

Is my fear unfounded, yes
if I send the scanner back to Uniden
for repair will I get the same scanner back? yes
I have a 200XLT Uniden that went total dead .
First I took to my local Radio Shack store big mistake that was they said
they could fix it but they had it for 14 days and told me sorry but were
not a authorized uniden dealer.
so I went to the Uniden web site got the info and send in the mail
scanner to Uniden and 2 weeks later the 200XLT was like new again they
did a nice job on it and it still works fine,
But Pete tell me what the 900 mhz on that band i can't find nothing to
listen too. any hints?

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

You will most likely find scanning the aviation band a bit
dissapointing no matter which antenna/scanner you have.

You should be able to hear transmissions from planes that are up to 75
miles or more distant from your location. That is because they are at
a considerable altitude.

Receiving the base stations is another thing. The base station
antennas are generally not very high. They don't have to be, the
planes they are communicating with are already quite high. Thus the
range of base stations you will be able to hear from your location on
the ground is generally only a few miles, maybe 10 or so.

The most common systems are from GE/Ericson or Motorola. They transmit low speed data on one of their frequencies. All you need to receive it are a radio that will cover the frequency with a "discriminator" audio output jack, a "data slicer" which is a circuit that cleans up the signal coming from the radio and shifts the levels to RS-232 serial data, and the software to decode and display it. All this is commonly available on the internet. All you need to do is search on keywords like MDT, hacking, EDACS, data slicer, etc.

That sorta depends on his location.....
I know that, living in the dfw area, the band is always full of 'action' (if you can call it that)...
And I normally hear both sides of the conversation from several different airports here.. Some of which I'm sure are more than 10miles off...
My antenna, btw, is an el-cheapo $35 vertical 2meter/440 ham antenna on a 25' mast...
It seems to work just as well on the HF vertical antenna at about the same height, tho, so I don't think it makes much difference what antenna you use.....

The Stargate SG1 crew (tv show) is filming Wednesday and Thursday here at Simon Fraser University (Burnaby, British Columbia, Canada). They have been here before.

I was talking with one of the crew members and he gave me frequencies for some of the radios they use on the set.

452.4125 for communication between directors, assistants, etc
691.2?? for the actors' microphones

I can scan the 452 freq a few kilometres from the campus (helps that SFU is on top of a small mountain) but reception from that range is very poor.

From: bif1988 <brokingbr@att.net>
Message-ID: <3B0409DC.6CC66728@att.net>
Source record: 65533

I have a question. I just got a Radio Shack Pro-89 Race Scanner that was on sale. According to the documentation this scanner can be programmed from a computer using a hard Wire Method or an On Air method. It says that it will receive input from a certain frequency. But the documentation gives No details about a program to use or even how the file needs to be set up on the computer to sent. Has anyone got this scanner and been able to program it with the comuter? If so how did you do it? Or was I just screwed by Radio Shack and I should input all the frequencies by hand.

Thanks for any help.

You'll be disappointed Shawn. In addition to being designed for a much higher frequency range, than your scanner radio, they are also highly directional. You'd probably get better results with a coat hanger.

Well, this particular act motivates them to trump up charges, just to sieze the person`s posessions, and get the money. It isn`t the first time a case got "creatively invented", and it wont be the last, either. You ought to try going up against the Feds in court. They will bring in 20 people who claim you did this and did that, that you have never laid eyes on before in your entire life. When you add in Waco, Ruby Ridge, and the recent misconduct with the McVay case, and you got a bunch of people who are often worse than those they are supposed to be policing ! Here in Maine, we got local police departments that deal drugs, and even protect certain drug dealers, even mobsters, as long as they are "playing ball" with them. What we got here is 1920`s Chicago, in reverse........ Now the mobsters are at the COPS beck and call, and I think we can figure out just who is corrupt here.... The local police dept just three miles away here was investigated for its connections with the mob, but it all got hushed up.............. There never was a clear "outcome" of that supposed "investigation".... What a surprise.... Get on to yourself... "Criminal Law" is a damn good name for it.....

Source record: 65543

I want to improve the capacity of the battery pack for my
Uniden Bearcat model 2500 hand held scanner (battery pack
model BP2500).

I have one of the later manufactured scanner and it works
fairly well, but the problem is capacity. The radio will hardly
last three hours on a full charge. It looks like Uniden was aware
of this because the radio came with two packs, but it's still a pain.

There appear to be five small Nickel Cadmium batteries in the pack.
Does anyone know of a modification that improve it's capacity by
substituting lithium-ion batteries, etc?

Thanks

> It wouldn't even work with the ones that're able to 'reach up to' the 2.6ghz

dishes the size of the old Primestar on up are great to use for
satellite monitoring. Inmarsat and weather sats are some you can
monitor. But you will need a low noise amp and some form of feed
designed for the frequency range you are monitoring.

You of course will have to aim the dish at the proper coordinates
to hear anything.

I need a power cord for the Electra BEARCAT III, IV series vintage scanner. If someone has a spare around, or one they would like to sell, please e-mail me with details.

Thanks in advance.

Dan

What's the scoop on these new long dist.
cordless phones with a range from 8 to
90 miles. I understand they use 300Mhz
mil. air band. Sounds like these phones
would put the squeeze on cell companies. With prices from $300 to $1000
it would
pay for itself in cell bills, even some long
distance charges. I bet the FCC would have a hell of a time stomping
these units
out. J. Glas

If the system is a true MDT ... not a newer higher speed data MDT ... not a laptop with cellular modem, then you may be able to get the software and schematic for the hardware on the net. My bet is that you will not be able to monitor them.

I went to the website referenced and several things jumped out at me:

It says right in the ad they are not FCC approved for use or sale in the US. This is because they are using too high a power, (1 watt on the handset and 4 watts on the base) to be legal without having a license. The frequencies they used are in the VHF TV band so you would be completely swamped by the local TV station running 1 million watts ERP. These people ary relying on the ignorance of the customers in believing they are going to get anywhere near the distance they're claiming.

The VHF frequencies being used at the power levels they're using, (1 watt), into a "rubber duck" antenna would be doing good to get 1 mile in open space, certainly nowhere near the 8-90 miles they're claiming. This reminds me of the 100mpg carburators of years past. Anyone with the most basic knowlege of RF or physics knows this is pure marketing hype with no basis in reality.

The cops in my old town did not use MDT at all. They use the CDPD technology. like you said, there are a few dedicated cell channels in the 800 Mhz area. Transmissions are encrypted. and it sucks for us. I got the info from one of the police radio techs.

There are few if any "open repeaters" that allow autopatch access. Normally you need to be a current, (dues paying), member of the ham club that maintains the repeater in order to get the access codes to use the autopatch. There's no such thing as a free lunch.

I have actually seen some advertised in other countries that had a 20-40
mile or so range, tho...
Nowhere near 90miles, but with the addition of an external antenna it might
'get out' quite a bit further than what's advertised. The name "Voyager"
'springs to mind' as one of 'em, but who knows.. ;) They're also illegal
here, btw.

One mobile trunking radio presently used as a conventional receiver.
I have 39 frequencies presently programmed in it, they are listed below.
Most radioshops will reprogram this unit for about 15-20dollars.

this radio has great sensitivity and selectivity (no interference
from cell towers etc.)

this radio has a 8 character display for each channel.

this radio comes with original mobile mounting bracket, dc power
harness with fuse, dc wall plug for the home, lighter adapter,
3 1/2" magnetic mount antenna with cable ant tnc connector. there
is no microphone with this. this unit measures: 2"h x 7"w x 8"d

I will cover the shipping and insurance for this unit.
I would like to trade this unit for a scanner or scanner accessories
of some sort.

presently programmed with:

"meta 11dv" 862.7375
"meta 12dv" 862.2375
"meta 13dv" 863.6875
"meta 14dv" 857.4125

Would be illegal first and second, to get that kind of coverage, you'd need high power and a high gain antenna very high up.

I hadn't even thought about it.. But with a tech no-code ham license (I passed it after a weeks' glancing at the "study material") you can use auto-patches on quite a few public repeaters, or even your own, to make free telco-calls from as far as 300miles away (I've actually used one in Houston from the DFW area once).... Usually more like 30-70miles, but an HT (walkie-talkie for hams...) can provide mucho better coverage than a cordless-phone...

But what about the phones used on commercial airplanes? Is it legal to listen to those? Is it possible? Or are they scrambled/digital?

Maybe you needed to look at that study material a bit closer. The idea of
a phone patch is not to make FREE phone calls. There is a section in the
rules that cover using amatuer radio to avoid tolls or in your words free
telco-calls. Typical catch-22 rules but its there. Many repeater
operators have a disclaimer relating to this.

Jake

Better reception at what frequency, not that it matters. It is not a
transmit rod, whatever that is.....it is a vertical element that helps
on the lower frequencies. You want it.

Make sure you credit the quote to the correct person please. I didn't
write that BB did!

In article <3B0537BE.44B687D@ucr.edu>, gary.croll@ucr.edu says...
> There are few if any "open repeaters" that allow autopatch access. Normally you
> need to be a current, (dues paying), member of the ham club that maintains the
> repeater in order to get the access codes to use the autopatch. There's no such
> thing as a free lunch.

Good point. It seems to be it would be difficult to even use a open
autopatch if you could find one. Does it broadcast the access codes on
the air? DOH! Good point!

3847. Re: Radio Shack Discone

Newsgroup: rec.radio.scanner
Date: 2001-05-19 01:00:39 UTC
From: Super
Message-ID: <XAjN6.1980$Zv1.646180@paloalto-snr1.gtei.net>
Source record: 65481

The cons about the Radio Shack Discone are as follows:

Crimped ground elements: This is what makes the Radio Shack discone inferior to all other discones, as it implements
aluminum tubing crimped to metal threaded screw posts to screw into the base.
The mere act of crimping causes much noise (in the form of intermod) between the joints.

UHF Connector: NType connectors are much more superior for higher frequencies as they are a much lower loss
connector which is meant for higher frequencies. The technical aspect of Ntype connectors is that they never insert
their own impedance. They are always at 50Ohms across all frequencies they are designed for (up to 4ghz) whole UHF
connectors change impedance and insert their own impedance difference into the line/signal.
This is why you will always see the higher quality cable manufacturers (Eupen, Andrews, Connectix) never using UHF connectors.
They only offer NType and better.

I agree. Open autopatches are largely a thing of the past. This is mainly due
to the proliferation of jammers who like to screw around with the patch (dial
9-1-1, etc.)

The Radio Shack Discone is DEAF anyways !!! Don't do like I did and scrimp on an antenna after paying $350 for a radio -- go out and buy a good antenna, too.

Mike

3870. forsale: police siren, brandnew 35.00US shipped

Newsgroup: rec.radio.scanner
Date: 2001-05-19 13:05:41 UTC

3875. Re: Las Vegas NV Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-05-19 13:36:02 UTC
From: robdon33@aol.com
Message-ID: <20010519093602.11849.00000406@ng-ft1.aol.com>
Source record: 65354

Here's what I have. I don't live in Vegas now, I am in L.A., but these frequencies for the Las Vegas Metropolitan Police Department is still the same as before. This past summer they switched to an improved radio system, and for those who have listened to Metro in the past, you can hear all of dispatch's radio traffic.

1--159.150--Inquiry
2--159.090--Southeast Area Command
3--158.970--Southwest Area Command
4--158.745--Downtown Area Command
5--159.210--Northeast Area Command
6--159.030--Northwest Area Command
7--158.790--Rural County/Administrative
8--156.210--Tactical/Car-Car/Special Events
9--Same as Ch. 7
10--155.910--SWAT
11--155.940--Narcotics
12--156.210--Simplex Car to Car
13--155.460--Traffic Enforcement
14--156.030--Tactical

Boulder City PD is 154.800--that could change as they are planning a move to the Clark County RCS.

Henderson PD is on the Clark County RCS now.

North Las Vegas PD
856.7375, 857.7375, 858.7375, 859.7375, 860.7375--GE Erricson System

The Clark County RCS frequencies will be forthcoming soon.

The only drawback to the RS antenna is construction. If it was deaf
something was wrong.

3877. ICOM R3 Questions on features.

Newsgroup: rec.radio.scanner
Date: 2001-05-19 14:08:02 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <9e5uo1$9cu$1@coranto.ucs.mun.ca>
Source record: 65358
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

I have afew questions on the NEW ICOM R3 Video Receiver.

1) Can the R3 scan an upper and lower frequency range for
video like from 900 Mhz to 980 Mhz or do you have to manual
tune the frequency range for video signals? Say your at a car race
and know the frequency range for the cameras but not the exact
frequencies, could you have the scanner search for them or do
you need to know the exact frequencies to be useful?

2) Unlike the R10 the R3 only has a clone port/connector. The
R10 have both a clone port and a CI-V computer control port
so you have a computer automate scan/search features and have
a spectrum display between two search ranges. I have used the R10
and found that you could use the CS-R10 computer clone/data management
software with the CI-V port if you own a CT-17 instead of using a
OPC-478 cable. Also, the only difference between the OPC-478 and
CT-17 is the pins are switch for data and ground (I heard this on
the news groups).

Anyway to get to my question, Can the R3 be used for automated
computer control to log frequencies, signal strenght, transmit
time, etc like the R10? You can use a CT-17 by reversing the pins
but does the R3 understand CI-V commands or does it just have
commands for uploading/downloading frequencies/text and setup
options?

It would be very sad for such a nice scanner with a very wide frequency
coverage (495 khz to 2450 Mhz) to not have true use of computer control.
this would really criple the scanner/receiver compared to models like
the AOR 8000/8200, etc.

I would not be suprised if the R3 did understand CI-V commands and
not me talked about in the owners manual.

3) Last question is about a software program that is better then the
CS-R3 uplaod/download program. I forget what it's called but it
claims it can program the NEW 8.33 khz frequencies for the air band
in memory BUT not in the VFO mode. Can someone explain how the software
can program 8.33 khz frequencies when the scanner only has 5, 6.25,
9, 10, 12.5, 15, 20, 25, 30 and 50 khz but not 8.33 or even 1 khz?
Also if it can do it for memory channels why not the VFO mode?

If you know of any secrets or hidden features in the R3 please email
me or post it. Other radios have had hidden features including Bearcat
Scanners with keypad ones. Like you hold down afew quys while

pressing the power on button and test frequencies come up or puts
it in demo mode, etc.

3878. RFC: PRO-2067 500 channel mobile multi-system trunking scanner

Newsgroup: rec.radio.scanner

Greetings!

I've been shopping around for a mobile/trunking scanner to
put in my F150. Does anyone have some background on the
PRO-2067? Is it worth $350? Is anyone using the computer
interface?

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002
%5F007%5F000&product%5Fid=20%2D196

Who makes this for Radio Shack and is it also available
under another brand/model? Also, looking for reviews on the
product.

Thanks in advance!
-Bobby

Yaesu supplies the international market, so full receive versions are available for all of those models. Any source of European version scanners could sell you an "unblocked" model, but it would be illegal, of course, to import it into the US. There are a number of online sources that will be willing to ship them to the US at your own risk, and expect to pay a little more than the going rate for the US models. One I know of is www.bander.com

Check out the PRO-92.com site. The PRO-92 is the handheld equivalent
of the PRO-2067. One of the main complaints re the PRO-2067 is that
it powers up in the Manual mode, rather than the Scan mode.

I had one, and i have to say i traded for a pro92b in a week. The
sensitivity is so poor in the 800mhz band. and It misses alot of
trunk calls. the pro-92 was more sensitive and missed less calls.
If your interested in a good scanner I have a new bc780xlt for sale
it is the most advanced scanner for trunking today.
thanks brontebear@yahoo.com

That is an interesting observation, considering the circuits of the PRO-2067, and PRO-92, are identical. I've owned both, and noticed no difference in sensitivity in any of the bands. The 800MHz band was excellent. You may have had a defective one, or you were using an outside antenna? Some complained of a problem in the 150MHz band, with the PRO-2067, but this was due to overload, resulting from an outside antenna. Using the attenuator solved the problem. The fact is, the PRO-2067, and PRO-92, are very sensitive. If they overload, due to an outside antenna, it desensitizes the receiver, and makes it appear to be deaf.

The best Discone you can get without going military grade, is the ICOM-7000
as it has NType connectors and a solid
noisless construction. Problem is, they charge an insane amount of money for
it because of the stupid NType cable that
comes with it, big deal!

Any vertical antenna is omni-directional. Discones are wide-band, meaning they cover a wide frequency range, i.e.; 30~1300MHz is typical. A single vertical element, will be optimized for the particular frequency it was designed for, and perform good over all, for most other bands.

There are other factors to consider. The distance you're trying to cover will determine how high the antenna should be mounted, as most signals are "line-of-sight". Use the best quality coax you can afford, especially if you're running any distance over 25', and monitoring 800+ MHz. Although the impedance of your cable should be 50 ohms, i.e., RG8/u, cable TV coax RG6/u, which has an impedance of 75 ohm, will work just fine, for receive ONLY, and is low-loss. Avoid using 50 ohm RG58, it has high loss at higer frequencies.

Check out the following sites for some great scanner antennas:

http://www.grove-ent.com

http://www.universal-radio.com

Radio Shack used to sell an antenna that looked like the Scantenna. I wonder
if they still do.

No, they discontinued that one...not sure why...possibly because it was so awkward to stock, and ship. Grove carries it. It is an excellent wide-band alternative to the discone, and actually has come gain, where the discone design typically does not.

Be advised, a good friend of mine had the Scantenna, mounted high above his cottage, near the St. Clair river, in Michigan. It didn't hold up to well to the severe ice storms, and high winds.

Ummm, there are a couple different types of discone
available through eBay sellers. $29.95 and $39.95
as I recall. I have one each of two types and both
work alright for me.

While the radio Shack discone is a fine performer, it is poorly built. I had lots of problems with the lower radials becoming loose at the top. The radials are swaged onto the screw stud and just don't hold up under stress. They start wiggling and inducing noise to the scanner. I tried re-crimping with no success. I had a fair number of the lower radials actually fall off the screw stud. I had to go back to Radio Shack and plead with the manager to sell me a bunch of spare radials from another antenna to keep mine up and working.

A while back I did a Deja search and others have had this same problem. Spend a few bucks more and get a more rugged discone.

Good luck,

Tracy, W7TRX

Not to be nit-picky on an otherwise very good post, but would you say
a vertically-polarized yagi, such as one for 2m or 440 is
"omni-directional"? :)

My RS discone had good ears. It just fell apart. The lower radials are
poorly attached to the screw stud. I had to buy spare radials from RS to
keep it running. I can't recommend this antenna.

I read in a book just 2 days ago that the Yaesu company make only two
different models of the VR-5000.

1.. For the international market - Completely unblocked
2.. For the U.S market - Cellular blocked, etc

At a guess, I would take it that all of their scanner lineup would be
exactly the same.

As to just which other countries get the same model(s) as the U.S is
outside my knowledge but in New Zealand we get the same as the Aussie
market - completely unblocked,, as per all scanners. I also read in the
same book that Canada may well get an unblocked version too. Whether this
is true or not, I don't know as I don't live there.
Hope that helps....

In addition to what I just typed...
If you fancy the idea of buying over the internet, ask for a price => minus the local sales tax,, which "does not" apply internationally, even though it may be advertised on web sites as such...
I am soon to buy the new Uniden 780-XLT here in New Zealand. They aren't quite yet ready to relaese them as they (Uniden) are still testing out the trunk tracking feature on our trunking system. Meanwhile Australia released theirs a few days ago. I thought I could jump the gun here, after talking to an unco-operative Uniden over whether they could pre-sell one to me now. I emailed an Aussie electronics company, which is also here in New Zealand, to see if they could send me one - they were only too happy to oblige. I asked them to quote the price, minus their internal tax because, of course, I am not an Australian citizen. They replied with the "adjusted" price which was some $60 to $70 cheaper than advertised on their site. Now that is worth thinking about. Unfortunately the cost of mailing the item brought the price back up to about the same price with tax, so now I have to think a bit harder...
Not many people relaize that internationally, you "do not" have to pay local taxes (if they exist) and the sellers wont tell you unless you ask. They will be only too happy to take your bucks if you are unwise enough to give them.

You start a threadnand ask about discones, then add to your own
thread by asking about some other form of scanning aerial.

Do you know what you want ? I do, and preferably with the discone.

i have just visited the Yaesu UK site and found that the 'V5000'
covers 100
khz to 2599.998 Mhz (no blocks)
the 'V500' covers 100 khz to 1299.99998Mhz (cellular blocked) -- so what
more do you want ?? buy a UK V5000

3913. BC780XLT Flash upgradeable?

Newsgroup: rec.radio.scanner
Date: 2001-05-20 01:06:35 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <9e75arksa1@coranto.ucs.mun.ca>
Source record: 65397

Can the BC780XLT be upgraded for NEW trunk systems via
Flash upgrade?

If not can the computer software send upgraded trunking
info to the radio and can data channel info be sent to the
computer for NEW software to decode NEW trunk systems?

I'm just wondering if the BC780XLT had the future in mind
similar to computer motherboards so you don't have to buy a new
BIOS everytime they improve something.

If you do buy the Pro-2067, Order the programming software through
Radio Shack or directly from GRE. There web site is
http://www.greamerica.com/scanner/scanmgr.html.
There are 2 sites that deal with the Pro 92 (the hand held version),
www.pro92.com & www.pro-92.com
The difference is the dash between the pro and 92. The web site
without the dash offers a data cable and software for less than GRE or
Radio Shack, but the difference is that the Pro92.com cable only
allows data to be sent to the scanner from the computer. It DOES NOT
allow you to send info from the scanner to the computer. Also, the
Pro92.com software SUCKS!!!!! I bought it and wish I hadn't.
As far as my feelings on the Pro 2067, I really like it. I have mine
as a base scanner with an external antenna and it does a pretty good
job. I really like the CTCSS feature, which can really help to reduce
interference. Also, being able to alpha tag each channel is really
nice also.
I got mine when it was on sale at Radio Shack and I saved $100.00. It
was one of those unadvertised sales that you have to go to your local
Shack to know about. So, you might wanna call your local store and see
what they say.

Could it be someone's wireless headphone system hooked up to a shortwave radio? Could it of actually been EWTN cable TV? (which sometimes WEWN carries audio for) or someone's cordless phone off the hook?

I have heard Television stuff around the lower 40 MHz range (cant remember the exact freq). Heard someone watching SNL on Comedy Central one time

Just trying to think what that could be but It is probably not coming directly from Birmingham

Guys,
I just picked up a working Uniden Bearcat BC172XL 20 channel scanner for $5.00 was it worth it ? Als, does anyone have any info. s it didn'e come with a manual.
Was it worth it and is it a good scanner ?
Thanks,
Speedy

3923. AR 8000 squelch -- lazy!

Newsgroup: rec.radio.scanner
Date: 2001-05-20 06:08:43 UTC
From: (unknown)
Message-ID: <3b075d05.1145075@news.pix.za>
Source record: 65408

The squelch on my AR 8000 seems to be lazy to open. On the first of a series of overs it might only open 2 or 3 seconds into the transmission. For the rest of that series of overs it opens immediately a transmission starts. If there is then a break of a few seconds till the next series of overs it again doesn't open until a few seconds into the first transmission.
I noticed this particularly when a few of us were at the local airport and reception on their scanners would start before mine. I compared it with another AR 8000, which worked just fine, and switched aerials -- just the same.
I have the squelch backed off just as far as it will go without opening and the batteries had been fully charged.
Any ideas?

Thanks
Noel.

Hello All,

I just have uploaded CwGet 1.20 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamradio-software.com/cwget.zip .

Your comments are welcome.

Best regards,
Sergei
http://www.dxsoft.com

==========

CwGet Versions History.

V1.20
The "Setup->Logarithmic Spectrogram" menu command or
Alt-Z hotkey switch spectrogram window between linear or logarithmic
scale.
Analogously, the "Setup->Logarithmic Oscillogram" menu command or
Ctrl-Z hotkey change oscillogram window scale.
Background colors of spectrogram and oscillogram windows can be
changed now.
See "Setup->Spectrogram Background Setup" and
"Setup->Oscillogram Background Setup" menu commands.
CwGet can transfer received symbols to another software now.
Data exchange can be made by DXSOFTEX.DLL library. See
http://www.dxsoft.com/dxs-exch.zip for details.
V1.12
User can change spectrogram center frequency now. Press "Alt" key
and
click on the desired frequence by mouse left button to move the
frequency
to the window center.
The marker of TX frequency is made to help with zero-beat tuning.
The TX marker is short thick black line. To change the TX marker
position,
click on the desired frequency by right mouse button (or by left
mouse
button with "Ctrl" key pressed).
"Speed Lock" button was made. CW speed is fixed when this button is
pressed.
Hotkey for this button is Alt-K.

3929. Cell-capable scanner ...

Newsgroup: rec.radio.scanner
Date: 2001-05-20 12:22:46 UTC
From: Svideo@webtv.net
Message-ID: <26183-3B07B716-11@storefull-116.iap.bryant.webtv.net>
Source record: 65415

Yes, I'm lucky enough to possess one from the pre-FascistCC days, but I'm not receiving nearly as many random signals in the 800 meter band as I used to.

It's rather strange too, since the unit would land on one active cell after the other in search mode only a short time ago.

My first thought was FEMA interference, but then a friend of mine came over yesterday all excited over his new phone from US Cellular.

He said every account got a notice saying that if they were willing to trade-in their old phone, they could upgrade to a brand new unit with more features completely free of charge.

Naturally, the guy jumped at it (how could any conspicuous consumer resist a lure like that?), but I'm wondering if this "revised" equipment is the actual reason for the dead air space?

I can still pick-up conversations from two states away, but the search mode cycles the band several times before I catch a single one now.

Any thoughts on this?

3930. PR090 Assistance Please!..

Got a Realistic PRO90 at a Police Auction recently ($70/deal)... how-ever, did not have the MANUAL included... Slight Problem for a while!..

Have had a little assistance and was able to 'load' the TrunkTrack freq. for the area and am extremly happy NOT to recieve the 30-40 CITY UTILITY CHANNELS, when attempting to listen to the police/fire areas.

Now for the 'problem'... the AMBULANCE channels here are 'conventional' and in the 149-155mhz range, my unit seems to receive either TrunkTrack OR Conventional, BUT NOT BOTH?!....

Can anyone assist me in getting this unit to TRUNKTRACK (800mhz) AND CONVENTIONAL (153mhz) at the same time?.. or is this unit not 'set-up' for such a 'dream'?.... Have Dloaded the Bearcat bc245xlt manual from the 'net' and the units are similar enough for other functions to work, how-ever, the instructs in the manual for doing the command I want do not seem to work...

HELP... thanking someone in advance: Lou Kells <ap915@hwcn.org>

The PRO-90 (as well as the BC235) will NOT allow trunking and conventional scanning at the same time. It's one or the other unfortunately. I have the Pro-90 myself and bought it back in 97. I quickly found that out and now I have the BC780 and Pro2067 mobile scanners that can scan both trunked and conventional at the same time.

Source record: 65423

Thoughts? Yeah...the cell phone industry wants to be all digital. That's no secret, and many other radio communications systems are following suit. Many would argue that the scanning hobby will die a slow death as a result. I still pick up a lot of analog cell activity around my area (central NJ), but ultimately this activity will dwindle away to nothing. Soon, having an unblocked scanner will not be much different than having one that's blocked.

If you want to stay active in radio, there's still plenty of fun in amateur radio, so if you don't already have one, consider getting a ham license, and you'll have all sorts of new activities available to you. Licensing is easier now than ever before (thanks to the "FascistCC", as you put it, wanting to keep the hobby alive). Many would also argue that cell phones and the Internet are killing the amateur radio hobby, too.

Cell phones: good or evil?

Right. The 245XLT (TrunkTracker II) will, of course. This is an especially important feature if you live in a metropolitan area which employs a VHF "intercity" frequency, which coordinates various public service agencies. You will want the ability to program this frequency along with your trunked group.

Probably due to the "snap-in-place" design of the elements, vs metal screws, as are used in other antennas.

I bought six of these on closeout last year. Paid $9.99 each. Excellent
antenna for quick setup & usage at campsites, cabins, etc. Also great to
side-mount on a rain gutter as a "hidden" antenna, if you happen to be in an
area with roving Homeowners Association Nazis.

Whatever you do, DON'T buy a Workman discone! This is a cheap knockoff of the Diamond design. Absolute junk!

The hardware began to rust within 2 weeks! Radials began falling off within one month.

Spend the extra and get the Diamond. As with everything, you get what you pay for.

3944. FedEx Memphis Trunked Frequencies?

Well with the scanner here in my bedroom, I routinely pick up police calls from a couple of towns 30-40 miles away. I haven't really programmed in frequencies for any that are further away than that.

I also routinely listen in on the air band, and I can hear O'Hare airport, which is about 65 miles from here. (I suspect they use pretty powerful transmitters, though, so it's probably not a big deal getting them this far away)

Often times this happens when you have enabled "power saving" mode on the
radio. This works by keeping the receiver powered down when the squelch
is closed. every 2/3 seconds the receiver will power up and check for a
signal. This makes your battery last a great deal longer but comes at the
price of missing the very beginning of calls. I'm sorry I can't give you
specifics on how to turn power saving mode off on the AR-8000, I haven't
used that radio before.

I'm considering using 900 MHz wireless headphones for a purpose they weren't intended for.

This application requires that I would be able to set specific groups of phones and a corresponding transmitter to different frequencies to isolate them from each other whikle being used in the same proximity.

Can someone familiar with these products advise if this is possible?

Thank you for your assistance.

Mark

Yes I own both. I have a Uniden 2.4 GHz and it cannot be scanned as it is 2.4GHz and digital at both the base and handset. I heard all of the other 2.4G phones use 900Mhz at the handset and not digital, so they can be scanned.

<myemail@goes.here.com> wrote in message news:fdrfgts0lh99l31j3krn09lus5dnsmk3ke@4ax.com...
Can they be scanned? I see they say spread spectrum on the box but is that on both the base and handset?

I remember a thread when they first came out where people said they were 900mhz on one side and 2.5ghz on the other and that the 900mhz side could be picked up. Is that still the case or are they a pretty secure phone now?

Nothing exciting from an HF perspective. In fact, the only new thing introduced was a 2, 220 and 440 handheld from Kenwood. Pretty boring, but always fun to go to Dayton. Even if it did rain like Noah's flood on Friday.

Hi!
Thanks for the suggestion. Power Save mode was set to on. I have
disabled it and this seems to have cleared the problem.

Thanks
Noel.

Heck, this thing has been posted to most of the newsgroups I subscribe
to that have nothing to do with shortwave. Freeware groups, NYPD TV
groups, computer-help groups--run a Google search and you'll see that
somebody has WAY too much time on his hands....

Huh, I have two of those Discone (T-734). Been up for over a year and a half. No rust here. A little discoloration to the metal, but certainly no scaling rust. And they aren't falling apart either. I wonder if you live by the ocean or something.

Workman does not make these antennas, they just sell them like a lot of places do. They are made By CTE International. For half the price than the Diamond, plus being resonant for more bands, I think they are a good value.

There is no one single answer to your question. Some of the best scanners made, don't do Trunktracking, so if you need Trunktracking, and buy a scanner that doesn't support it...then it's not going to be the best, in your eyes. And those that do Trunktracking, are not wide-band, so it really depends on your needs.

For a comprehensive review of all the popular scanner radios, click here:

I detect a foul too. I realize lots of people actually believe in that "love every race as your own" garbage, but the cheesy rant is just too liberal textbook to be anything but sincere.

And if it isn't an advertising ploy, then we're to overlook a brainwashed off-topic intruder on a parallel mission?

Of course, the whole purpose of a discone type antenna design is that
it is BROADBAND, i.e., NOT resonant for ANY band!

Source record: 65327

I've toyed with the idea of converting this scanner for 12VDC operation instead of 10VAC.

Is the 10VAC simply rectified internally (so that I could supply regulated 10VDC after the rectifier diode(s), or is there something else going on.

Anybody have a schematic?

Thanks,
DE KN4VN - Lee

They do, its just DATA copies from the US and despite being advised of
this error some time ago appear not to have changed the page.

Even if they were "cellular blocked" for the UK or European markets the
allocations used for cellular would differ from those in the States.

The 2067 often is sold much cheaper. Radio Shack was selling them for $199
ate the Dayton Hamvention. If I was to spend $350 I would try to get a
BC780. The 2067 is programmable by computer but not controllable.

Source record: 65342

FOR SALE:

Regency Z60, compact, programmable 60 channel scanner.

This is a three band, FM monitor receiver and digital alarm clock for use at home or on the road. It is a double conversion, superheterodyne used to receive the narrow band FM communications in the amateur, public safety and business bands: 30-50, 144-174, and 440-512 MHz.

This unit is in excellent condition with no visible damage and includes user's manual and telescoping antenna.

The unit works fine including all the LED readouts. As with all used electronics, "as is" applies.

Price: $45, Shipping Included via Priority Mail.

Buyer must prepay with money order or cashier's check.

If interested, please email: kb0zmt@home.com

4006. Re: Radio Shack Discone

Hello Walt,

I am afraid you are wrong my friend. Where your statement isn't exactly correct for even a standard Discone design, (there are frequencies within a standard discone's bandpass that the antenna is resonant at) it most certainly is incorrect for the *enhanced* discones of this discussion.

The T-734 along with the DJ-130 both have dedicated components that resonate the antennas on bands outside of the discone's designed bandpass. In the case of the DJ-130 and the RS model they both have a upper whip that along with the associated coil resonate the antennas on the 6 meter band. The T-734 has a much longer whip that along with it's coil resonate the antenna on 11 meters. This whip can be trimmed to move the resonance up to 10 meters, or like I did, it can be trimmed still further to push the resonance up to 35 Mhz. (where there is some PD/HP activity in my area). In addition to the upper whip and coil, the T-734 has loading stubs that screw onto the ends of Two of the *cone* radials. These stubs have adjustable stingers that are adjusted for resonance on the 46/49 Mhz. cordless phone pairs. Or again as in my case, you can remove one stinger altogether which pushes the resonance up to 50 MHz., and adjust the other for 47.5 MHz. resonance which would seem to bring in the cordless phone pairs very well. These resonating components make the T-734 very effective for low VHF band use. IMHO

Will,

The reason for not picking up as many cell frequencies is probably because of the fact that (like your buddy), the consumers have all switched to digital cell phones which can't be picked up by the typical analog scanner even if you have full cellular coverage.

I wonder when digital scanners will be more affordable and available. If anyone has any information on this, please post.

The first signs of rust appeared on the allen screws, which attatch the 2
sections of the upper vertical whip together. This happened approximately 2
weeks after installing the antenna.

Who the hell would listen to fast food drive-thru windows?

Most likely n scanner addict.

What could be more boringthan fast food monitoring? Paint drying?

But you do it anyway just to see if we can.

You can't help it.

We see a post, we see a frequency we have to try it out.

Boring, illegal or repulsive when you see the frequency your mind says "I
wonder if.." and you hand reaches for the knob or fires up the fingers
for the keypad to find out.

So with that out of the way, what is the farthest distance you have heard
a fast food drive-thru? Wierd propagation, ducting and such doesn't
count.

What's the farthest you heard? Who not only makes a mean burger but also
has the powerhouse headset transmitter?

I don't want to get into a long, meaningless argument on terminology.

But, I would suggest that the antennas you describe are not properly called discones (which are strictly defined in various technical articles and textbooks), but would be better described as "composite" antennas, which contain elements of a discone, 1/4 wave sections, loaded sections, etc. This does not imply in anyway that they are not good, efficient receiving antennas. But they no longer fit the definition of a discone.

Walt

4026. First report Yeasu VR 5000

Newsgroup: rec.radio.scanner
Date: 2001-05-21 20:22:20 UTC
From: Planet Internet <roald.kooijman@wxs.nl>
Message-ID: <9eehjt$4p8cg$2@reader03.wxs.nl>
Source record: 65250

Hi,

I just bought the Yeasu VR 5000 with DSP unit.

First impression:

Positive:
Great allround radio.
Superb Band scope function.
Great HF receiving results.
Wonderful "viewscreen"
RF (passband shift) works well.
With the DSP unit you really can fade away a lot of unwanted
noise/intermodulation. Noise reduction of the unit works well, as well as
the narrow filtering in CW.

Negative:
Bad manual in which not everything is explained.
Time in display (when not in Worldtime mode) can't be set in summertime.
Unable to change part(s) of a already stored memory.
Less sensitive on VHF (compared with my AR 3000a)
I would rather have a BNC- connection in stead of PL.

Remarks:
Depending on what frequency range you're listening, the receiver is very
sensitive for which antenna is used. I experienced sometimes intermodulation
and signal overload.

End of report 1.

Roald Kooijman

About 15 years ago, I was in the photo department of the
newspaper in West Palm Beach, FL, getting ready to help cover a local
Grand Prix.

In addition to all of the normal frequencies we monitored, I
was sweeping all of the possible frequencies I THOUGHT they might use.

After listening for a couple of hours, I commented to one of
the other guys that those drivers are the hungriest folks I've ever
listened to. Almost every transmission was someone ordering food.

That's when I first became acquainted with fast food
drive-thrus. I was listening to the McDonald's about a block away.

Anyone have plans for a diplexer to allow VHF (say over 100MHz) and HF(30MHz and below), to be combined into one coax feed line and top be seperated to feed a SW and VHF(UHF) scanner?
I have a design packed away (somewhere in one of many boxes filled with other unlabled diagrams), but a friend has asked if it is "do able".
Before digging out Spice and going nuts with it, I thought I might ask these two groups. A lot of SWL listen to scanners and sanner nuts listen to SW.
Anyone got any favorite designs.
PCR100, PCR1000, and WinRadio owners might be interested also.
2 antennas. I coax and (with a PCR1000 etal) no splitter.

Correct. In fact, one frequent seller of these on eBay refers to them as
"large discones."

For the record: the performance of the Workman antenna was very good. Superior
to my ScanTenna on 25-54Mhz, and nearly as good as the ScanTenna above 54Mhz.
It's only the shoddy construction that I have a gripe with.

Son in law has a set from Radio Shack (the "you've got question and we can not even find the light switch" people). There is no provision for changing the frequency on which it operates. It is fairly wide band (about 75KHz) FM.
IF (such a small word) you can find sets that offer different channels, it should be a simple matter to set them on different "channels". Like "cheap", and not so cheap, HTs expect some bleed through if channel A receiver gets too close to channel B transmitter.
I would group all the transmitters just outside of the target area so all receivers and transmiiters would be roughly equadistant.
You might want to check with a local museum and see what they use. Especially if they offer mulitple language support. I am sure there are commercial setups that will do the job.

Since monitoring cell is illegal, it doesn't seem likely that digital-capable unblocked scanners would ever be readily available to the US market, but I wonder what might become available for the international market. Right now, it's pretty easy to obtain an unblocked scanner in the US if you're willing to take a (small) risk, so when the technology is ready and cost-effective, I suppose a digital-cell receiver would be just as easy.

Based on the cost and availability of digital cell phones, I'm sure the decoder circuits are cheap enough, and there is a market for the digital scanner, it's just those pesky federal laws prohibiting their use for eavesdropping that makes it impossible to ever get such a radio accepted for sale in the US.

I understand that the Supreme Court today ruled that it is not illegal to disclose information gathered from conversations whose "privacy" is protected by law provided it is for public safety reasons and that the person disclosing it is NOT also guilty of the federal crime of illegally obtaining the information. In other words (if I understand correctly), if you overhear a cell phone call that puts someone in danger, you would have to anonymously disclose it somehow to someone else who, not knowing who obtained the information, may then legally disclose it to the public.

Maybe with these kinds of rulings, someone may eventually make an argument that it's okay to listen to cell phones if you are doing it for public safety reasons and if you don't disclose anything you hear that is NOT in the interest of public safety. Something to think about.

Jonathan - I thought that most or even all cellular frequencies are
roughly on the same band worldwide - apart from any "new" developments. I
thought we all used between 800 and 900 mHz for cellular. What are your
frequencies?
Ours are about 820 - 840 for input and 870 - 890 for output (roughly)!!
There are also some sort of trunking services between 859 - 861 mHz.
Sorry if I am wrong....

Try another part of town, and try another scanner. Should not be such a fast change. I have found that some less developed areas of US actually have more cell activity than ever right now. A town in west Texas with 100,000 population has 2 used frequencies per mghertz at peak times. The analog equipment is not convertable and will be around just like AM crap radio for a LONG TIME!

It is too bad that the US has not learned from its communist friends. One of the first things that Hitler did was ban the listening of short-wave broadcasts not originating in Germany. The USSR ban listening to many broadcasts and even jammed VOA and the BBC. China and Cuba also have bans on listening to certain broadcasts. It looks like the US, (a so called free country) is showing its true colours. It is nice to live in truly free countries like Canada. The only things we can't do are use the scanners to make profit, repeat what we have heard or use them in the commission of a crime.

In regards to blocked scanners the information is all over the net to remove the blocks. I did about 15 min of searching and 10 min to remove the blocks on my PRO-2022. On my ALINCO-DJ-580 it took about 2 min to remove the blocks and open up the transmitter. All accessible on the net so before you buy see what can be done to remove the blocks.

I have a good friend that is the senior communications tech. for a major radio company. He feels that even if you had a digital scanner that you would not be able to brake the digital encryption codes that each company has and you would have to break the encryption for each user individually. Also many of the companies are trunked and change the trunk jumps daily at random.

I too miss listing to the police and fire calls but we created our own demise by chasing the fire trucks to the seen or getting to the seen of a shooting before the seen is secured just to rubber neck and gawk. Then there is the drug goofs that used the scanners to find out when and ware the busts were going down. The media killed the monitoring of cell-phones with the royal families. If they would have just kept quiet about what they heard the companies would not have been so egger to spend the billions to ensure that the privacy of there costumers was protected.

Happy Scanning

Doug,
Just to clarify things a bit. There will not ever be any kind of scanner sold legally in the U.S. that is capable of picking up the cellular frequencies. This has nothing to do with a digital scanner, though. The digital encoding system being used by law enforcement, the APCO Project 25 standard, is not the same as the system being used by digital cellular and PCS phones. Uniden has announced that it will be marketing a digital scanner in the next year. They have apparently done their research and are sure of the legal standing regarding the monitoring of LE digital.

Everybody keeps using the term "digital scanner" as if all digital systems were the same. They are not. Because of this, we can look forward to seeing scanners capable of monitoring LE digital trunking systems in the next year or so. At which point, we will see the proliferation of DES encoded digital transmissions, I expect. The Uniden press release makes some interesting observations regarding this possibility.

Since monitoring cell is illegal, it doesn't seem likely that digital-capable unblocked scanners would ever be readily available to the US market, but I wonder what might become available for the international market. Right now, it's pretty easy to obtain an unblocked scanner in the US if you're willing to take a (small) risk, so when the technology is ready and cost-effective, I suppose a digital-cell receiver would be just as easy.

Based on the cost and availability of digital cell phones, I'm sure the decoder circuits are cheap enough, and there is a market for the digital scanner, it's just those pesky federal laws prohibiting their use for eavesdropping that makes it impossible to ever get such a radio accepted for sale in the US.

I understand that the Supreme Court today ruled that it is not illegal to disclose information gathered from conversations whose "privacy" is protected by law provided it is for public safety reasons and that the person disclosing it is NOT also guilty of the federal crime of illegally obtaining the information. In other words (if I understand correctly), if you overhear a cell phone call that puts someone in danger, you would have to anonymously disclose it somehow to someone else who, not knowing who obtained the information, may then legally disclose it to the public.

Maybe with these kinds of rulings, someone may eventually make an argument that it's okay to listen to cell phones if you are doing it for public

safety reasons and if you don't disclose anything you hear that is NOT in the interest of public safety. Something to think about.

Tom,
What you are missing is that there is no single digital standard. Cellular/PCS has several different systems. LE digital uses the APCO Project 25 standard, which is not the same as the cellular/PCS. The cellular/PCS standards are proprietary, and are not used anywhere else. We can look forward to a LE digital trunking scanner from Uniden in about a year or so.

Well if you want to get picky a used cell capable scanner can be sold
legally. ;-)

Well with more and more software controlled radios out there, it really
would not be too hard for someone to offer software that decoded a large
selection of "digital signals" (using the built-in hardware of a digital
scanner so you wont need to make/buy a 2 or 4 level FSK). In fact I
would not be surprised if we see PCS decoders available on the net
somewhere soon. Yes, this will not be "legal software" but that does not
mean it wont be out there... somewhere. (like the flex pager, and MDT
software that is out there right now)

Similar but not the same.

The UK analogue system was 917.0125 - 949.9875 at 25Khz spacing with
Mobiles -45MHz at 872.0125-904.9875

The three UK analogue networks are all now but dead with GSM/PCN
900/1800 the standard. These are the same as in Australia. There are
some areas in the USA with GSM/PCN/PCS networks however they are on
1900MHz which means you need Tri-band phones rather than the "more
common" dual band phones which allow pretty much roaming anywhere
(except the USA).

For an accurate run down on UK spectrum allocations see:

hi all

i own a bearcat 101, and the squelch no longer functions, so the radio receives fine
still, but wont scan cuz i cant squelch out the static.

i have already replaced the pot, that wasnt the problem ... so obviously something
else in the squelch circut ...

a physical inspection does not reveal any parts that overheated or melted

i dont have a schematic for this unit, any suggestions are greatly appreciated ...

thanks in advance

Thanks for the clarification. I probably should have used the term "digital cell phone-capable" instead. Yes, there are many digital formats, and my discussion was meant to be limited to digital cell phones. I expect that scanners will eventually be capable of multi-mode digital decoding, just as analog scanners now are capable of multi-mode analog decoding (AM, FM, SSB, etc.)--with the exception of cellular telephone, of course. The difference will be in the number and type of formats manufacturers decide to support and the complexity of decoding required.

Why do so many people believe that a cell capable scanner is the absolute ultimate scanner to own? In fact, many people own a scanner for no other reason at all except to listen to cell phone calls. So many people will go out and buy a new Bearcat BC245 or BC780 and the first thing they want to know is how to "mod" it. (Neither model can be).

I don't care what people do in private, but publicizing it is why scanners made for the US market are cell blocked in the first place. Before long, most all cell calls will be digital anyway, PCS phones already are all digital.

>Sorry if I am wrong....

I live in Asia. There are about 8 cellular networks in my country. With my blocked scanner(U S A version), I found about 6 of them. 3 networks from 420 to 470 Mhz. One of these networks use SSB. One in 860 Mhz. The other two in 930 to 1000 Mhz. The 2 unfound networks may be in the unblocked range. I've heard from one telecommunication guy who said that there's one in the 1800 Mhz but I can verify this since my scanner couldn't go above 1300 Mhz. Six of these networks use dual mode (analog and digital) but can't verify this. Anyway this is what we're been told by the cellular companies in their advertisements in the local media.

Coast Station.

With the reasonable prices on some scanner models, may I suggest you upgrade too a new scanner.

May I ask, just what is your point?

I also believe in the US Constitution and the 1st amendment but there needs to be limitations. If the media would only tell give the facts and not the hype they would be ok. Some of the media tend to believe the public are a ignorant and don't understand what's going on in the country. The media draws conclusions on criminals guilt or innocence that are arrested even before that person goes to trial.

MS 2000 is very much like NT 4.0 and software does not necessarily behave from platform to platform. See if you can get the command set for that particular scanner. Then, at least, you'll know the language that it expects. Sorry I cannot be of more help. If the software is available free on the web, post me privately and tell me where. I don't have the radio, but I do computer for a living and I'll bet that if you cnn get the software to fire up at all it'll work. If it's Windows-based, however, it's got a chance. If DOS-based, there's less likely of success.

It disturbs me how Sony can put things on the market, drop them a year, or two later, and say, "we don't support it anymore"! I would think they would have some obligation to support it for some length of time. I will remember their lack of after the sale support, when considering future purchases of electronic equipment!

That being said, their software should work in Win2k. Have you checked your COM ports, and tried changing any of the settings? You may have to disable FiFo Buffering, in the Advanced Properties settings for the COM port. Also, make sure you're using the correct COM port, COM1, or COM2. Try changing the baud rate. Let me know if you are still having problems.

yeah well you don't get GAIN with that discone. You may live in the middle of manhatten and not need gain. But if you live out in the boonies like me you get a high gain antenna, not a discone.

And when someone says that an antenna failed on them, you gotta ask some questions.
Was it mounted next to tree limbs that pounded against it in the wind?
Do you live in some slimy swamp climate like S Carolina where it rains pretty much 24 7?
Did you have someone install it that is mechanically inclined, or did you bend and rebend every part at least 10 times trying to get it put up?
Did it fall over 3 times right after you put it up?
Do squirrels jump off of it all day long?
Did the kids flying kites into it damage it more than the roofers bouncing shingles into it?

enquiring minds want to know.

None of my neighbors have cordless phones.
Of course none are all that close and 2.4GHz might not even reach here.
But, if I lived in a community, the last thing I want is to know that
my next door neighbors wife has a boyfriend (or girlfriend) on the side.
Just imagine the "fun" if you slipped and mentioned it.
A slip of the lips could well get someone killed.

I cant believe know one admited that they listen to there neighbors. I never used to listen but day after day it is like a soap opera. I know all the drama in my apartment complex. I have even written down some apartment numbers to see how far my scanner was getting out and that was very disapointing. I found my scanner wont even pick up across the street or else no one is using 46 range any more.

Is this one of those "trick" questions...?
I mean, we all got stung by a similar one a few weeks ago didn't we?

Does it mean....?
1. How many of us used our scanners to listen in on our neighbours while they were talking into their portable phone?
2. How many of us used our scanners to listen in on our neighbours while they were talking into their cellular phone?
3. How many of us used our scanners to listen in on our neighbours while they were talking into their CB or Ham radios or other transmitting gear?
4. How many of us listened in on our neighbours in any of the above and/or while they simply chatted to another person(s) face to face while we stood/sat ontop of our scanner?
5. How many of us listened in on our neighbours in any of the above and/or while they simply chatted to another person(s) face to face while "they" stood/sat ontop of our scanner?

=> in the last month....

Forgive me for replying in this seemingly carcastic manner but about a month ago, a "very" similar question was asked and we all bit like hungry snapper fish after a piece of bait. Needless to say the question asker then posted a smart reply to all ours, stating => who mentioned anything about portable phones and similar?
It showed "us all" up as presumptuous idiots... because basically he was right - nobody mentioned anything about phones or what have we - just like your question at the top......

How would I go about adding a vertical whip to my old Radio Shack 20-013 discone that didn't have one? Do I just attach it to the screw on top of the antenna? What length should I use? Does it affect the 2M and 440 transmit ability? Do I just attach a CB whip? With or without the spring coil at the base? If I just use a straight length of rod, what length should it be?

Thanks

Yes. This discone is constructed as to allow the addition of a "stinger" whip for low frequencies. The whip from an old, bottom-loaded CB antenna works great!

You are wrong. The media KNOW that the American people are ignorant. We must
be ignorant. We still have a KKK and skinheads.
We still pay ridiculous prices for gasoline. We continue to re-elect the same
lawyers thst have been screwing us for years and, when they die in office,
allow their wives and/or children to inherit their office.
We fail to use our most powerful privledge as a "democracy"..........
dissent.
The slanted media are the least of your problems, but you (we) are too
ignorant to see it.

I am sure some Scanners have accidently crossed over a Cordless Call when doing a VFO Search, but if I ever did pick one up I would just keep Scanning on; then I would have to think long and hard if I should report myself. :-)

I look at Cordless and Cellular Calls as private as does the Law, its something I make a point to stay away from.

Just because you can does not mean you should.

I would rather listen to the Drama of Police Chases, Fires, Military Air and all the other assorted stuff that is in the open and ok to Scan.

Just my $0.02 worth.

>a LONG TIME!

I think everybody shouldbe issued a cellphone-capable scanner for a short
period of time so you can all find out that cell comms are BORING!!
I have an AR-1000XLT that I bought in 1991 and a BC-950 and I NEVER listen to
cell frequencies because it'll put you in a coma. PL tones are more interesting
by far.
I think that this is a case of wanting what you can't have. There's a segment
of the scanning population that just can't stand to think that there's
something out there that they can't hear.
BTW as far as location is concerned, I work in the State Capitol of NY.
If you can't get juicy cell comms here, you can't get 'em anywhere!!

It's probably woth more than that as a parts source, so yes, it's a good
deal.
For a manual go to www.uniden.com and you should be able to order a
reprint of the manual right on the website. I did so for my BC-950 and received
an excellent quality copy of the user's manual.

4113. Alert - 245xlt Users

Newsgroup: rec.radio.scanner
Date: 2001-05-23 18:22:27 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3B0BFF8B.6F7B2753@hotmail.com>
Source record: 65150
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The 245xlt Resource Page has been recently been updated! If you haven't visited the page yet or haven't visited for a few weeks, you might want to check out a few of the new files and information. Some of the file listings look the same but have been updated (D.C. Area, Central Florida to name two).

This page is a resource page for owners of all scanners. While it concentrates on the 245xlt scanner, the documentation/cheat-sheets contain information that ALL SCANNER USERS CAN USE to program their scanners. Additionally, the cheat-sheets are usually very compact in size, so they are great to print out and take "in the field" (especially for the auto races).

The main reason for starting this page was to create a database up uploadable/downloadable files for the 245xlt. If you are traveling to a new city or sporting event, it only takes a minute to upload a file to reprogram your scanner. When you get home, it only takes a minute to reprogram your scanner back to its "home" configuration! Probably just as importantly, documentation is available for each data file so you will be able to get up to speed quickly on the new location and have a reference to use while scanning.

Things kind of "snowballed" with this webpage, so you will find all kinds of tips, links to computer control software for the 245xlt, modifications, etc. Everything involving data file exchange is accomplished via FREEware (links provided), so this information is accessible to everyone!

PLEASE TAKE THE TIME TO SEND ME A FILE FOR YOUR CITY OR SPORTING EVENT!!! YOU ALREADY HAVE YOUR SCANNER PROGRAMMED, SO IT WON'T TAKE YOU MUCH TIME TO CREATE A FILE AND SOME DOCUMENTATION TO SEND TO ME!!! Don't just "take" - please donate your time to help others by making this resource a valuable site for everyone. Directions to accomplish this are found on the website.

I am still waiting to hear from some people who promised to send me files a few weeks ago. Please send me those files as soon as you can!

As always, this page and its information are free for personal use only. NO ads, pop-ups, banners, etc. are found on the page. It is a very basic webpage but that allows it to load more quickly (besides, I am not a webpage guru anyway!)!

Thanks,
Doug

>Can anyone recommend a good antenna for this range of frequencies?

Boy. What a load of crap they come up with here in the name of assistance.
I have a VR-500 and I use a telescoping whip antenna because the stock antenna
sucks. You probably won't be disappointed in the VHF air band as you've been
told if you use a good antenna. You may be less that thrilled with the UHF air
band (225-405 mhz) though, depending on your location. I'd recommend a rooftop
antenna for UHF.
I use (again, contrary to popular opinion) a RS Discone that I've cut down to
begin it's useable coverage around 200 mhz and it works very well. For the
record, the elements are as reported, prone to breakage,
but I've never had one just fall apart as some would have you believe.
I broke an element on mine because I erected it badly and it fell. My fault.
It's a very viable antenna for the price. I also use a RS scanner ground plane,
the one with three radials, one radiator, and two small
(3") vertical elements. Great for VHFlow and high.

My neighbours are almost never on my scanner. Or underneath it. Usually they are way off to the site, about one house block away.

Hi there, I am looking for some people that might be interested in contributing to a new web site that I am creating....

This site is not specific to NINN really, it just utilizes one of its domains.

In fact take a look www.ninn.org

Not much to see yet.......

That's why I am sending out this Email, I am looking for anyone who is interested in contributing to this community.

Right now I am looking for managers that can watch over and work on the following

Frequency database
(entering and looking for submissions)
this is most likely going to be user submitted and only need to be entered and managed
****

Scanner/dispatch news
This will be looking for, and receiving scanner and dispatcher related news
****

Links
This will be receiving and managing a Links section

****

Message Forums
New message forums directed at the scanning community, not just NINN

****

If your interested let me know soon

thanks
Brian Baldwin

Hi all
I have come to the conclusion that I have been ripped off, over a deal/swap for a radio. I sent a Pro-2035 to a guy in the states as a swap for a h/held Yupi 7100. I know he has received the radio as I have his signature on the recorded delivery slip. He said he posted the Yupi to me by air-mail, but I have not received it. this was 16 weeks ago. I can safely assume that I have seen the last of my radio and am not going to see the Yupi. No reply from e-mails and no reply by letters, I live in the UK, anyone any ideas?
thanks
R Glazier

You seem to be short on some punctuation marks. What is "dont"? And
that last character after the word "dont" in the previous sentence is
called a question mark. It indicates that the preceding words were a
query.

You're a poor spelling cop, friend. ;)

I stand corrected on the Part 97 bit, but stand by the assertion nonetheless.
Read FCC regs. You do the legwork.

>Better yet....
>Why don't you tell us if anyone has EVER been prosecuted for "divulging".
>Cellular calls don't count...

Why should you qualify the questions ans answers here? Who died and left you
in charge? Cell calls don't count? Why not? Do they back up my assertion?
The original thread here was a debate of the legality, not specific case
history.
That said, twist it as you will.

Bingo. Well put.
My advice is to 1) Make sure the info you're about to give is solid, useable info.
2) If you insist on anonymity, cal from a pay phone.

Personally, I don't call unless the PD will benefit from the info I have. I always give my name, etc. and explain that I think I have info they need, and I ask to remain anonymous. My report goes on the blotter as given by a "concerned citizen". I don't make a pest of myself, above all. None of the garbage of showing up at accident scenes and such.
The scannists they don't like are the ones who sit in their cars and chase calls.

I believe the original question did NOT involve "responding with scanner and cellphone". Rather, it was something like hearing a chase and discovering the suspect by looking out the window at home. I say by all means call and tell the PD you heard the chase and know where their suspect is. Don't go looking for them, but if you come to the knowledge innocently, call them.
Any cops in here to give their side of it? Dispatchers? Speak up.

4138. FS: SMA-TO-BNC CUSTOM FIT ADAPTERS

Newsgroup: rec.radio.scanner
Date: 2001-05-23 23:08:31 UTC
From: gulyas@netzero.net
Message-ID: <f002a6a1.0105231508.dbaba31@posting.google.com>
Source record: 65177
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for an sma-to-bnc antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base, mobile or different syle use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5,VX-1,FT-50-R,VX-10,VX-150,VX-110,VXA-100,VXA-120
Icom: IC-T8A,IC-T81A,IC-Q7A,IC-R2
Kenwood:TH-D7(all models),TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200,HTX-400,HTX-245
Aor: AR-16

Previewed in Nov.2000 issue of QST magazine.

$11.95 + $1.50 S+H (one to unlimited)
Check or money order only in U.S.Funds.
Specify radio model when ordering.

STEPHEN G. GULYAS
706 LALOR ST.
TRENTON, N.J. 08610
U.S.A.

A photo of the adapter is available upon request.
I welcome any questions or comments at my email:
gulyas@netzero.net

Thanks for looking at my posting.

A 10 amp supply should will work, otherwise just get a marine battery and use a wall wart to tricke charge it. (marine batteries have easy to uses terminals.)

Not only that, but think about how you're going to feel when the cop gives you that look. You know the look that says "Look at this jackass. He is too stupid to get a job as a security guard so he's out here chasing us around." Then the cop will go on to think "I don't have enough bystanders out here without this jitbag chasing me around all night. When the hell are they ever going to outlaw these damn scanners and get these dorky ass nerds off of my back??"

If you want to keep up with what's going on in your community that's great. If you feel an overwhelming compulsion to get involved in somethin you don't need to be involved in, maybe you should bust the scanner into a million pieces. If you just can't help yourself, try watching a COPS re-run and pretend it's happening right in front of you.

Just because you CAN get away with something doesn't make it a good idea. Think for a minute about it how it affects the hobby and it's future. Or you can just be one if those "35 year old, still living in your moms house, Captain Kirk t-shirt wearin, nothing better to do with what little life you have, NERDY ASS DORKS!!!"

Do the right thing!!!

Source record: 65098

I am doing spring cleaning in the shack and have decided to liquidate some items:

1) The first is a newly released book by the ARRL: "Antenna Zoning for The Radio Amateur; everything you and your attorney need to know to obtain a permit for your antenna-support system"; by Fred Hopengarten, K1VR. ISBN-0-87259-821-7

This book is brand new still in the shrink wrap and comes with a CD-ROM, the ARRL gets $49.95. I am selling it for $30 + 5 shipping.

2) Scanner Master Massachusetts Frequency Guide ISBN 068534567X, USED but like new condition. $10 + 5 shipping.

3) World Radio & TV Handbook 1998: Like New Condition $8 + 4 Shipping, lists all of the names and contact numbers for radio and TV outlets world wide.

4) 1997 Amatuer Radio Almanac by CQ publications: New condition. ISBN: 9780943016160 $4 + 3 shipping.

4160. BC780XLT: Can Service Search perimeters be reprogrammmed?

Newsgroup: rec.radio.scanner
Date: 2001-05-24 12:53:03 UTC
From: toomanyradios@aol.com
Message-ID: <20010524085303.05666.00004130@nso-fo.aol.com>
Source record: 65099

Just got my hands on a 780. Excellent machine, but it does have a couple of annoying little issues that I'd like to fix. Both involve the Service Search.

Question 1: When in "TV Broadcast" search mode, is it possible to modify for coverage above 512Mhz? I realize the "normal" stop point of Uniden scanners is 512Mhz...but the 780 has a dedicated TV Broadcast search mode, making it absurd to arbitrarily stop at Channel 20!

Question 2: Is it possible to add/delete frequencies from the "Special" bank of the Service Search mode? I have found this to be very useful...it's pre-programmed with common FRS, GMRS, business, interant, MURS, etc., frequencies. However, for some strange reason, 2 of the FRS frequencies are missing. Specifically, 462.6875 and 467.6875 are absent. Is there any way to add these (or other) frequencies to the search mix?

Thanks in advance.

4161. Re: Assisiting police w/scanner?...

The best way to "assist police w/ scanner" is to stay FAR AWAY from the scene!

Please...in the interest of preserving our hobby...do not show up at accident/crime scenes with scanners! Doing so makes you a poster boy for further restrictions on scanning/scanners/possession of radio equipment by individuals.

Speaking as an active member of the electronic media, you're absolutely right. The media in this country, to satisfy cash hungry executive suites in what has become a breathtakingly competitive field, in order to attract and hold an audience has resorted to sensationalism, and running with unconfirmed stories. The first casualty of this relaxation of journalism standards is the truth. The second casualty is fair play.

Couple that with the belief that media are the perfect place for activism, and activism dovetailing perfectly sensationalism and the quest for ratings, and you have what amounts to institutionalized chaos, and a worldwide propaganda machine.

Journalism schools have also been much of the problem; teaching this guts/glory style of irresponsibility, with an excruciatingly blatant agenda to shape, not reflect, public opinion. So now two, soon to be three, generations of editors, newsroom directors and publishers have been molded by this highly politically motivated education.

It would seem that limits are indeed a good idea.

Trouble is, who would set them? Who would make that decision? Who would make the decision about what we know, how we find it out, and how much truth there would be in news stories across the nation? Who would make those calls.

One of the most chilling interviews I ever heard ran during the campaign, in which Algore, --and apparently this had been recorded sometime before the campaign and was replayed in a PBS special on the candidates during--Algore actually said these words: "There SHOULD be limits on speech in this country. As a practical matter, there should be laws that hold people accountable for what they say,

and the horrible effects they have on people. There should be laws that hold people accountable for hate speech, and the irresponsible things that are heard in media today. There should be laws that hold media accountable for what they expose our children to, and there should be laws that curtail the hate being spewed out of talk radio today.

"And in an Al Gore Presidency, there WILL be."

Well, it sounds good in theory. But who makes that call? And under what circumstances does speech become out of bounds?

Once you have legal control of what's said, and how it may be said, you have institutionalized spin control of all the news, and you have opened the door for those less concerned about the truth than you and I to take control of defining exactly what that truth is.

What you end up with is exactly what we have right now. But with the media content dictated by activist lobbyists and Congress, instead of activist news directors, editors and publishers. The only difference is, that if the government gets involved in setting limits on what is and isn't said in this country, people go to jail for voicing their thoughts.

If that doesn't sound eerily familiar, then you probably went to one of the schools where they taught that THAT was a good thing.

Given the choice between having to watch for squad cars when you speak, and having to sift through the bullshit when you watch the news...I'll sift everytime.

And the Founding Fathers agreed...that's why there's the First Amendment.

I have a PRO-92 and have never heard any "amplifier hiss". The
PRO-92, the 5th scanner I have purcgased, is the best of the lot.
Works fine.

By the way, if you are considering a desktop/mobile unit, why not the
Uniden/BC780XLT?

Walt

Don't discount a cubical quad antenna...if your the kind of person who doesn't mind building your own...I made a 2 element design..very sensitive, but highly directional of course...an overlooked DX antenna for broadcast FM..

> get in the way.

Um. YOUR wife is trapped in a car after an accident and because there was
just one car too many on the road the emergency unit was 2 seconds too
late arriving to save her.

Um. An officer has responded to a bank robbery and is in a gun battle
with three robbers. The nearest backup would have made it across the
tracks before the train blocked his path if there had been one car less
in front of him. His fellow officer is slain.

Um. How can you guarantee you won't be in the way? How can you predict
what will happen. Why would you risk interfering in these peoples jobs.

You have a scanner. Sit at home and listen.

It only takes one time of thinking your aren't in the way when you are to
cause a tragedy.

Ripped-off
Sure does look that way, some say to report it to the post office as mail-fraud, but I tried that before and got no-where. Proof is VERY difficult to obtain, not enough to warrant a court case anyway. If they say they have posted it, then its just your word against theirs, even proof of posting will not stand up in court.

>>Um. Why? If no laws are broken, too bad if they don't like it. Just don't
>>get in the way.

Because unless you are a Licensed Ham or have a Permit as required having a
Scanner in your Vehicle is illegal to start with, and
BIG number two is that any experienced Scanner knows is that it is a PISS POOR
idea to go trecking down to where the action is going on.

This is quite the reason behind the Police attitude that anyone with a Scanner
is a nut-job, criminal, wana-bee or just plain PAIN
IN THE A**!!

Unless you have business there stay away, this is a simple and OLD RULE OF
THUMB for Scanners!

Wish I didnt have to chime in on this one but it should be simple and clear to
anyone with a brain.

I have the following:

(The first 2 are FM Mode, the rest are AM Mode)

32.300 Operations
45.350 Primary
122.925 Freedom 1 & 2 Minijets
123.000 Air to ground support
123.400 Air coordination
123.450 Air to ground support
123.475 Air to ground support
123.500 Air to ground support
124.000 reported

Hope these help,

Very well said !! The police have enough to worry about without one more idiot (who should know better) standing around gawking. Then people wonder where there's a lot of cops who are against the public having scanners. Personally, I like to use the scanner as a tool to avoid the action.

Great Comment! You are right. Don't think that "Software Radio" is not being developed as we speak. I can envision radio capabilities being modified with a simple upgrade of software. Configurable computing will see to this. We are at an exciting time in radio. In a gap between Analog and Digital. I believe software radios will be the ultimate scanning experience. The industry will come up with new encryption schemes and the hobbyist will crack them. I can almost bet the word "Plug-In" will be used again ;) (PCS version 2.1;) We can already see this battle in the DTV arena. Talented individuals that are determined on getting free TV keep that battle going;) The switch to the digital world only means that hobbyists will have to follow the industry and learn how to keep scanning alive. I say, don't listen to the negativity about digital scanning... If there is a will (and a market), there is a way. Good signals to all.

I've sent 3 email to Pozilla tech support over the last few months for different questions on Winscan. I bought version 1.1 and also own 2.1 for my 895 and 245 scanners. No response to any of my 3 emails.

Do they ever respond? Has the company gone south?

If anyone has Winscan and found the same problem with the software please let me know.

Here's the problem I'm seeing:

The Banks change with no consistancy. Typically they go back to conventional. I've added names to the banks and changed to various types. Sometimes instead of 10 banks I see a listing of 30. The banks repeat 3 x.. I do save the file also.

It appears to be some kind of bug, can't reproduce it, but it happens often.

Any Ideas?

Kevin

An amazing new product will be released in the near future.

The Mantenna!!

The Mantenna is a special 3 layer 1 peice suit that contains copper strands and copper threading strategical1y placed at key areas within the interior wall of the second layer of the suit.

The suit layers are a special blend of nylon and rayon. This blend is coated with a non-reflective conductive spray (The spray maintains the natural beauty of the fabric and is non-toxic).

The belt line contains high grade BNC and PL style connectors to attach to your radio antenna connection.

The suit will be availabe in 7 differents colors to keep everyone happy!

The receive range shows remarkable results from 7Mhz - 1400Mhz.

An optional hat is available:

Hat model MAN-H1 is a cone style hat with built in Low Noise Amp (LNA) for those that enjoy satellite monitoring. The cone contains all the electronics and a high capacity rechargable power supply. Free during our official introduction will be an addon solar cell for constant recharging and constant power to the LNA.

Stay Tuned For The Official Release!!

I've had the same lack of response from Pozilla. It seems after the sale, they forget you exist. As a result, when I bought my new BC780-XLT, I opted for TrunkStar780 software, from Signal Intelligence, http://www.scanstar.com/ , the same people who market ScanStar! The software is rock solid stable, even runs under Windows 2000, and their support is excellent!

Urei,
As a former police 911/radio dispatcher, (Stillwater, OK), I can say that we welcomed calls from civilians who had information for us regarding incidents we were working, as long as that information was acquired by the civilian who was going about their normal, legal business. In other words, no call chasers. People who made a habit of showing up at crime scenes, accidents, etc., who had no valid reason to be there would get a long visit from an officer regarding the laws pertaining to interference with police/fire/rescue in the performance of their duties. Examples: Legit news media were ok as long as they didn't get in the way. Wrecker drivers could NOT just show up at accidents, we had a "on-call" wrecker company that rotated every week so that each state-licensed wrecker service got their turn. But on several occasions we would broadcast a emergency response request when the situation was life-threatening; "Stillwater PD to any wrecker in the area of XXXX, please respond immediately!" Call chasers who had no other reason to show up other than curiosity would get a very hostile reception. Sightseers at accidents, fires, etc. only get in the way and make a difficult situation worse.

As an example of acceptable reports: A civilian is driving across town on Sixth St. and hears on his scanner that the clerk at the Quik-Trip just refused to sell beer to a man that was already intoxicated. The subject left driving a '97 Ford Explorer, dark brown, OK tag PAA-123, no direction of travel. The nearest officer is ten blocks away. The civilian just passed the Quik-Trip 2 minutes ago so he looks around and sure enough, a truck with that license plate is just in front of him. The civilian quickly calls SPD and says "I just heard that call about the drunk in the Ford P/U, I'm behind the vehicle at 6th and Duck, eastbound." The dispatcher says "are you sure it's the right vehicle?' and the civilian says "Yes, it has the tag PAA-123, and the guy is weaving all over the road." The dispatcher asks him to drop back to a safe distance and stay behind the vehicle, and gets the RP's vehicle description, which is radioed to the responding officers. When the officers catch up to the subject, the civilian is asked to stop nearby. An officer gets the RP's information and warmly thanks him for his assistance. This is a welcome assist from the public, which is very much appreciated. There is no way the police can be everywhere, we need the help of the general public to do out jobs. I'm not saying there aren't officers/departments who resent the scanner-listening public, but most appreciate the help.

I believe what is needed here is discretion and common sense (a lot to ask, I know). You chase calls, you're gonna get in trouble.

Mark

Hi,

I've found Diamond's RH799 to be the best overall handheld antenna (w/ an SMA to BNC connector) (about $18 equivalent in Japan; don't know about outside of Japan).

For stealth use, I use my AOR 8200 MKII's antenna (w/ an SMA to BNC connector), which makes the set-up look like a pocket TV (great reception!) (?).

For the 144/430 Mhz bands, I've found Maldol's AS-30 to be a good choice (w/ an SMA connector) (about $25).

Don't get a stubby, IMHO, they are not that good.

For the ULTIMATE reception, I use Diamond's D-130 (discone) from home. I have one dedicated for my IC-R2 (about $90). (Shows you how much I love the little one.)

(Sorry, I live in Japan so I don't have much of a selection (Diamond, Comet, Maldol, etc.).)

Good Luck!
(Sorry if you can't understand my English.)

Not necessarily. Only a handful of states have prohibitions on mobile scanners. And that was my point. Let's keep it that way. Stay away from accident and crime scenes.

The government would love nothing more than to restrict your access to instant, unfiltered news via police reports on the scanner. By making a nuisance of yourself, you play right into their hands. Don't give them a reason.

The point is, you came on here with a big flag-waving speech about how Canada
is so much more "free" than the U.S., due to your ability to monitor cellular
frequencies legally. Myself and others pointed out some gaping holes in your
argument...mainly, your nation's handgun restrictions, socialized medicine, and
confiscatory levels of taxation.

Wait now...is this a PRO-92 or a PRO-94? The PRO-92 only has 500 channels, plus the PRO-94 is signified as "dual trunking."

Sure you don't have a PRO-94?

News flash: in today's morally-dead American society, nobody cares anymore what is ethical and what is not. "It's only illegal if you get caught...and then, find a lawyer who will get you off on a technicality."

Given the ability to do so, people WILL listen in on your conversations, whether or not you listen in on theirs. If you wish to keep your conversations "private" use encryption or a wired phone.

A Converter that is available at Radio Shack, comes with screw posts where you can attach the power leads.

Think they run around $40.00 (ish)

This Scanner is a single power type, so the converter is most likely the only route to run it on AC power.

This topic came up recently in my neighborhood actually. One neighbor mentioned to me that they thought their next door neighbor was listening to his phone calls on his cordless 900 mhz phone. His attorney told him there's nothing illegal about that, but I believe that's not true, but that's besides the point (how do you prove they are doing it after all, in court).

This whole topic was news to me. I simply didn't know that scanners were allowed to scan the frequencies that cordless phones use (and baby monitors - which I have and will now disconnect)! If it's illegal, why are machines sold that have this capability (or are people hacking their devices to do so)?

Appreciate any help you can provide in understanding this.

Also, I'm looking at purchasing a new phone, can the newer ghz phones be listed in on as well?

HI ALL

As I have noticed an increases in e mails regarding Shop Watch numbers I have set up a group for the sole purpose of finding them.

I hope Paul does not mind but I have posted his Shopcom and I have put in a link to the Scanning Directory web site.

Soon I hope to get all the numbers in one place but that is going to take time and help from you lot.

Well the group is at http://groups.yahoo.com/group/Shop_Watch feel free to come along and have a look.

It is not legal in the U.S. to monitor cordless phones. Scanners may include those bands because the frequencies are shared with other (legal to monitor) services. It's been two months since this FAQ came up, so -

The following is a dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605. To carry out the law, government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 65 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In April 99 the FCC revised 47 CFR 15.121 so that any cellular mod, even to one's own or a pre-ban scanner, constitutes manufacture. They

also required manufacturers to make the tuning and control components inaccessible, and limited the reception of cellular images.

In short, it is illegal to:
Manufacture or import cellular-capable scanners;
Modify a scanner for cellular reception;
Listen to cellular (and cordless) transmissions;
Divulge any communication to which you are not a party.

Hi,

I'm interested in recieving/decoding weather satellite images using a scanner and pc. I've been doing some reading up on it, and I know I need to build a special aerial (quadrifiliar helix). I've got all the software i need as well. My question is, will my scanner work? It's a Commtel 202 (pretty basic, I know!). It works on the 137.000MHz band the satellites use, but is it a good enough radio for the job?

Hope someone knows the answer!

Cheers, Tom "Pterodactyl" Williams

If the scanner bandwidth isn't correct you will have a problem. 30 khz is
the target if I recall. Yiu can get a Hamtronics WX receiver for I think
$150 and others higher up in proce. I have the hmatronics receiver and it
works great. Most will agree a dedicated receiver is the way to go.

Message-ID: <sLzP6.78$%O7.43853980@newssvr17.news.prodigy.com>
Source record: 65077

I just purchased a new BC780XLT and I was wondering what I should ask for my BC2500XLT handheld scanner if I sell it. It is in great condition and has all of the original accessories (case, AC adapter) and a 12V cigarette adapter cord. I have the original box, receipt, etc...I'd say it's in at least a 9 out of 10 condition, but I just don't need 2 scanners. Oh yeah, for those of you who care, the scanner receives cell phone frequencies, etc...Personally, I get tired of hearing people talk on the phone after about 4 seconds, but if that's your thing this scanner does it.

4239. What is the best mobile scanner antenna?

Newsgroup: rec.radio.scanner
Date: 2001-05-25 21:05:07 UTC

Message-ID: <7OzP6.79$1S7.44016694@newssvr17.news.prodigy.com>
Source record: 65078

What is the best antenna for a BC780XLT in a vehicle. I listen mostly to 460.XXX frequencies and 800.XXX trunked systems. I would prefer a small, unobtrusive antenna. An internal antenna would be ideal. I know that the small, unobtrusive antennas may be a compromise on quality of reception but I won't stick a whip on my truck.

4242. Adding an onboard preamp?

Newsgroup: rec.radio.scanner
Date: 2001-05-25 22:21:10 UTC
From: hamkid <cbkid113@hotmail.spamsucks.leaveme.alone.com>
Message-ID: <9emlqv$583$1@bob.news.rcn.net>
Source record: 65081

I have a radio shack PRO 2014 scanner that I was going to add an onboard preamp to. The preamp board is from Ramsey Electronics and is a kit. I am wondering if this will even work and if anyone has ever done this before. I have a GRE amp for a handheld but I want something more permanent. I don't mind making modifications to the RS. I have heard, and have seen this with my handheld scanner, that adding a preamp might overload the front end of the scanner and I might not be able to hear anything at all. Any thoughts on this? Should I even try to add the thing to the scanner? I will be putting in a bypass switch if it doesn't work but I would like to know if I should even waste my time before doing so. THANKS!!!!

4243. FS: Motorola Radios and accessories

Source record: 65082

Hello. I have the following radios and equipment for sale. Prices are listed, but serious offers considered! I NEED CASH!! Please email me directly.

13-MOTOROLA HT1000 16 CHANNEL RADIOS UHF $ 325.00 ea
(please note: These were all taken as a trade-in - Some are 2 ch converted to 16 channels. First buyers get real 16 ch radios.)

8-MOTOROLA SPARE BATTERIES HT1000 $ 20.00 ea

1-MOTOROLA GP300/P110 6 GANG RAPID CHARGER NEW $ 250.00

2-MOTOROLA P10 1 CHANNEL VHF RADIOS W/CHARGERS BUT NO POWER SUPPLIES $ 150.00

1-MOTOROLA 6-GANG P200 RAPID CHARGER $ 250.00

4-MOTOROLA P200 RADIOS UHF W/SPEAKER MICS $ 200 ea

3 - MOTOROLA P200 RADIOS VHF (No batterys) $ 125 ea

2 - MOTOROLA GP350 VHF 16 CHANNEL $ 300 ea

1 - MOTOROLA GP350 SPEAKER MIC $ 40.00

1 - MOTOROLA GM300 UHF 16 CHANNEL 40 WATT $ 275.00
This radio has a minor problem - I believe it needs a good tuning, but dont know enough to guarantee anything - No Mic or 16 pin connector. Radio only.

All equipment has been tested and is in good working order, but as with all electronics, is sold AS-IS! Paypal accepted and suggested, but will take USPS money orders.

Thanks for looking!

4255. where to buy crystals?

Newsgroup: rec.radio.scanner
Date: 2001-05-26 03:55:43 UTC
From: bob <bob@marsfreeradio.org>
Message-ID: <3B0F29AE.CAD2898C@marsfreeradio.org>
Source record: 65094

Hi
I would like to buy several crystals for my 8 band Plectron SM-312
scanner. Does anyone have recommendations where to purchase?
I'm not sure what type of crystals to buy, I pulled out these from the
unit:
33.780 MRL-2 (10.8?)
41.001 Sentry
153.260 MRH-2 (10.8?)
154.190 MRH-1 (10.7?)
154.875 p77-AH KDS
155.55 TC
155.865 TC
156.090 MRH-1 (10.7?)

Shouldn't they all use the same frequency formula?
Anyway I would like to be able to scan these high-bands freq, if
possible:
122.700
125.350
133.600
154.220
154.540
160.425
160.470
160.575

Thanks for you help!
Bob

You have to program the bank for the type of trunked system and the parameters for that type. You also have to input the type for each channel. It's all described in the manual. System ID is not required.

I have some questions on grounding which I need to understand more.
According to the article : Introduction to Scanning by Bob Parnass :

" If you do use an outdoor antenna, be sure to disconnect and
ground it during storms and when not in use to avoid a lightning
hazard ".

What's the meaning of this ? Does it mean that I will have to
disconnect the coax from my scanner and reconnect the coax BNC
connector to the grounding system ? Currently I don't have any
grounding system nor any lightning arrestor on my antenna system. Is
it important for me to have a grounding system or lightning arrestor ?

" Discone and ground plane type antennas can be more prone to
cause scanner damage due to static charge buildup because they are not
at DC Ground ".

What's the meaning of this ? What am I to do to avoid static
charge buildup that can cause damage to my scanner ?

According to the manual of my Icom PCR-100 scanner, it is
important to ground the scanner in order to avoid accidents involving
electricity and interference from computers. What's the meaning of
"accidents involving electricity" ?

My plan right now is to build a good grounding system using a 5
feet copper rod sunk in the ground using about 30 feet of grounding
wire to the radio. I have no intention of using a lightning arrestor.
Please advice.

Thank You.

Coast Station.

Message-ID: <3B0F7205.95D3479D@127.0.0.1>
Source record: 64953

He said 30khz, but it's actually 38khz if you want full bandwidth,
the Icom PCR-100(0) is great for this purpose using the 50khz filter.
Dont know how your radio will work...
A QFH is great, but even a turnstile antenna will work nicely
though it lacks performance at horizon levels

Well I for one have never used a grounding system to protect my scanners
from lightning strikes.
I guess officially the info you gave below is correct, but how many people
actually use a ground system to protect their scanners? Very few I suspect.
(Though radio amateurs often do to protect their equipment & provide a
ground to balance the antenna system on HF)

I'm quite high here, (about 300'asl) not the highest point though, never had
a strike (in the past 12 years), the only precautions I have ever taken
during a violent storm is removing the coax feed from the backs of the
radios. My opinion is don't bother*, of course if you're the rare unlucky
person to get a direct strike you'd have preferred to protect!

David

* unless your antenna is the highest point around

Try G & G Communications or Ken's Electronics for both Realistic/Regency (10.7 MHz IF) crystals and Bearcat (10.8 MHz IF) crystals. I've done business with both companies in the past, and their customer service is excellent.

http://www.iinc.com/ggcomm/

http://www.kenselectronics.com/

Scanner crystals can also be purchased through Radio Shack Unlimited, but I'd try G & G or Ken's first. Radio Shack recently raised the price of their scanner crystals to $10.00 each, whereas most other dealers are still charging

$5.00 each for crystals.

The best is to disconnect antenna from receiver. And better if you also
have a good earth connection.
When a there is a discharge it will seek for the easiest way to reach
ground, through everything on that way. So, if you are part of this way,
you get a little toasted.

>
> " Discone and ground plane type antennas can be more prone to
> cause scanner damage due to static charge buildup because they are not
> at DC Ground ".

This is because they're "open circuit" antennas, if you measure DC
resistance at the input with an ohmmeter you'll find an infinite
resistance value. This makes a lot easier to static for build up.
In many cases, when you have a stormy weather, if you leave antenna
connector diconnected from anything (when using such antennas) you may
see it arcing.

>
> What's the meaning of this ? What am I to do to avoid static
> charge buildup that can cause damage to my scanner ?

Use antennas that are of DC shortcircuited kind.

>
> According to the manual of my Icom PCR-100 scanner, it is

> "accidents involving electricity" ?

If it happens to be a mains leakage from AC supply to cabinet or
something else, you can be safe if exposed parts are at ground
potential. The current will flow to earth through this ground
connection, and not through you!
Regarding the noise of computers, it's because they're great noise
generators, the best here is to use a ground line to the computer also,
in order to have their power supply filters working properly.

>
> My plan right now is to build a good grounding system using a 5

Keep in mind that this is only a safety earth, not an RF earth.

Good luck
Guillermo.

To ALL that answered my question of trunk/conventional channel scanning, THANKS... wasn't sure IF there was a way to do it.. NOW, I know for sure it CAN'T BE DONE... I'm raelly not too worried about it.. the AMBULANCE CHANNELS I was hoping to 'grab' will quite likely be equipped to operate the 'trunk system' eventually.. (new stations in the area are jumping on the 'list' almost every month!....

Thanks also to the few who thought they could 'give me a deal' on a more compatable unit.. how-ever being in CANADA and having to let the thing 'cross the border' sure takes the 'shine' out of any 'deals'... example:

A RADIO OFFERED FOR $75. US funds... would have aprox. 54% added with the exchange rate between our dollars.. (Radio would now cost $114.)... then ADD on the DUTY for crossing the border, about 30% (Radio would now cost $140)... Then the post office takes it's $8. for border crossing (radio is now $148.)... the Federal and Provincial Govts up here would then take a 'cut of 15%'... (that's on the CANADIAN PRICE, not the US $75) or 15%..

The total cost of the original $75. deal... would be somewhere in the $170. or higher area!!!.... depending on IF my estimates were anywhere NEAR the current rates!.. AHHHhhh!!!...

Thanks again... but, IF I was to go for a 'deal' - the unit would HAVE to be in the Buffalo Area.. I could cross the border and bring it back on a 'cheaper declaration'... ONLY way it could be possible!...

Lou....

I hope someone out there can help. I am moving to the above area soon and have yet to find a good site that has a complete list of public service frequencies. I know the local PD is on 800 MHz trunked but cant find the plan for it. I would like to program my scanners before the move so I can just plug them in and monitor while I unpack the next few days. I checked the FCC web site and get far too much info to make sense out of it. Any links or web sites would be appreciated, Thanks!

I say Radio Shack; having used both brands I have always found the Pro's to be easier to use, program and offer more coverage than Uniden. (Military Airband and WBFM)

Just a note, I understand the Uniden and Shack Models are sometimes the same just different cases, not sure if this is still the case but I have heard this statement before.

This type of ground "rod" arrangement can be pretty inefficient if the soil in which it is buried is dry. During the summer months if your in an area that doesnt receive much rain you will probly have to water the ground. Even then it wont be very efficient.
Probably a better idea would be to use a roll of electric/chicken wire fencing and cover as much ground as you can and bury this as best you can. This at least will give a good "ground plane" even when the electrical contact with the soil is poor due to lack of moisture.

Both Uniden, and GRE, manufacture scanners for Radio Shack. Radio Shack
does not manufacture their own.

My experience has been that GRE scanners tend to be more sensitive, but this
also makes them more prone to overload in RF saturated environments.
Uniden, on the other hand, seems to get along better in these situations,
and can handle outdoor antennas with less overload. I also think Uniden
scanners are a little easier to program. Many Uniden handholds use
rechargeable battery packs, which can be a minor hassle, where the GRE's
typically use standard "AA" batteries, which is my preference.

Heh...heh.... I did the same ;-) I even put up an antenna for that
cordless phones, HA!!

.....just kidding.

Interesting little addition to this. When I was a bit younger my parents
and I were riding around with these two realtors looking for a house to buy.
They were using their oldskool cellphone and when we pulled up beside them
to tell them we were going back home they asked what I was doing. My
parents told them I was listening to my scanner which can pick up cell
phones, cordless phones, police etc. These realtors were getting impatient
with us since we didn't like any of the houses they took us to but when we
mentioned the fact that I could hear cellphone calls they got very scared
and anxious. I wonder what they were saying about us.........

Oh, well.

Cross-posted to:
alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Was monitoring Col. Steve on 3.260 United Patriot Radio last evening.
For those who don't know, United Patriot Radio is a self-declared "free"
radio station operating from Eastern Kentucky on the shortwave frequency
of 6.900 mHz (day) and 3.260 (night) mHz. Programming is "Patriot / Freeman /
Soveriegn Citizen" oriented. This station is also the new de-facto broadcast outlet
for the Miltia Movement in the United States. Some say it's a Clandestine. Other say
it's a Pirate. Whatever the flavor, the station is certanly the most curious transmitter
on the dial since the days when the legendary Wolfman Jack was broadcasting
into the USA from Mexico or the late Rev. Carl McIntire took his ship "Radio Liberty" off
of the New Jersey coastal limits to broadcast, sans-licence, in the 1960's.

Col. Steve said two pending changes with the station are in the works.
The first being operations on the freq of 3.260 USB will be terminated sometime around
the 1st weekend in June. Reason is the onset of Summer thunderstorm season
and the resultant high level of atmospheric (storm) QRN, all operations will
soon be on 6.900 USB only. Second, Steve reported that his "3 Kilowatt
Rock Crusher" amplifier should be up and running shortly, thus the
new transmitter power of 3000 Watts on 6.900 USB will allow for greater
coverage of UPR. Some of the station's "staff" apparently made the trip
to the 2001 Dayton Hamvention, and managed to obtain the balance of
components necessary to complete the proposed 3.0 KW power amplifier.
Hope that UPR has a small air conditioner and duct-work in place to cool that thing!

Finally, information on 6.900 UPR radio now appears to be being
hosted on the PBN web page which is at http://www.pbn.4mg.com
There is also an extensive write up on the station in the new
issue of Monitoring Times.

I have connections to my antennas where they come into the house,
and I disconnect each when there's a danger of lightning, and draw
them well away from the antenna cable coming down off the roof.
I also have a ground rod nearby that is connected by heavy copper
wire to a ground block I got at RS, which has threaded F-59
connections to run the antenna through, and a screw to connect an
earth ground to. This is supposed to draw off static buildup from the
antenna.

BUT if lightning hits something 50 feet from you, and even if
everything's disconnected, your stuff could still fry regardless. As to
disconnecting at the radio, that would have the wire potentially carrying
the power of a lightning strike right into your home - I wouldn't want that.
Better to disconnect outside the home and not have it fed right in to you.
I don't connect the antenna leads from the roof to ground when I unhook
them - I probably should.

Well, it would make sense that Motorola would push digital...they're making tons of money doing it! If they left well enough alone, they'd probably go broke.

The other advantage of digital of course is increased privacy, and security. In addition, it makes it hard for these kids that get their hands on modified radios, to play cops, and broadcast bogus messages.

Think it was a little bit of both, though Motorola owns the System used here in Palm Beach County and the Frequencies on which it operates. Although the County runs it Motorola gets BIG DOLLAR$ for it.

Hey, if you could cry the Sky is Falling and make Millions would you not?

Does anyone in netland have a copy of a service manual/schematic diagram
for an Instalert Fire Receiver that I could buy or pay to have copied?
I have come into possession several low band dual tone receivers and
want to see if they work.

Thanks in advance.

IDOT districts arent the same as Illinois State Police Districts.

ISP District 2 Elgin covers mchenry, lake, dekalb, kane and dupage county.
Some highway ops in Dupage are on the district chicago 800mhz edacs system.
Other dist 2 ops: 42.62 base / 42.68 mobile, 154.695 and the statewide
stuff:

155.475 ISPERN
42.50 LF2
155.460 HF4
155.505 Mob Ext and unit to unit

IDOT District 2 is in Dixon and covers jodaviess, stephenson, winnebago,
boone, carrol, ogle, dekalb, whiteside, lee, rock island, henry and bureau
counties. 47.34 and 47.14 are the freqs.

idot district 1 - chicago covers mchenry, lake, kane, dupage, cook and will
counties:

ILLINOIS DEPT OF TRANSPORTATION RADIO COMMUNICATIONS GUIDE:

CHICAGO AREA - DISTRICT ONE: STATEWIDE:

forsale:

New condition Motorola SPIRIT PRO PLUS radio,
with new charger, new rechargeable batterypack, new beltclip, new
rubberduck antenna.

this unit is 2 watts, far superior to frs radio distance (1/2 watt)

this unit has 16 frequencies in it and changed easily by sliding off
the back cover and changing the dipswitch setting.

(a list is supplied)

It has these frequencies in them:

462.575, 464.325, 467.7625, 467.925
462.625, 464.500, 467.8125, 469.2625
462.675, 464.550, 467.850, 469.500
464.825, 467.875, 469.550

I have 4 of these portables all in excellent shape. Fully charged
and ready to go.

price: $99.00 free delivery

(international postal check or certified check please)

thanks

Keep in mind, in many states it is illegal to have a scanner installed
in your vehicle. Often there are exceptions for hams, news
organizations, etc.. Check your state's laws to be sure.

This is correct.
I might add there are no hard and fast rules when it comes to scanners, the pro-2030 is made by uniden and overloads bigtime in saturated environment, more than any scanner I have used. And the Uniden 350 and bc700a and any others with that design that has no number buttons are pure hell to program. Not only is it backwards to most other scanners, but you have to get to the frequency before you can program it in, and that means going into the search band and going through a lot of frequencies to get to the one you want to program in.

The battery packs are expensive and hard to find a good deal on, the scanners using AA batteries are much better for me, I can get all kinds of AA batteries for low prices. I can get nickel hydride or nuclear peptide as soon as I see them, anywhere, whereas if you are stuck with the battery pack, you are stuck with whatever they want to sell you, usually no choices.

The truth is, you have to compare scanner model to model, you can't go by brand alone, both have some dogs and both have some kings. Although the Pro 43 and the Pro 2006 are both made by GRE, FWIW

snip
While strictly speaking, they are in the eastern half of the state,
please call them southern and not eastern. Sumerset is not eastern Kentucky
in cultyre. As an ex-patriot[(:-)] 'hill-billy', I take exception to the
nonesense spouted by this loon. While Eastern Kentucky is backward (maybe too
backwar to have an advanced radio station of this type), and true they handel
snakes, and vote democratic, and are way to ignorant, even they have more
pride and smarts to accept this crap. I listen because they are funny. Much
like the old VOA and Radio Moscow (we will have to talk one day about the time
I got pulled over in Perry county while RM was on my radio, boy was that FUN!)
I wish I could access the banking reocrods of the outfits that "advertise" on
this station. I can not beleive that anyone could make money with the crap
that is being peddled.
Eastern Kentucky has many (maybe too many) real problems, let us not liable
them with things they are not guilty of.

i was probably unclear.

someone said we couldn't get/carry firearms.

then i replied with my quote above...

then you repied with yours (which seems to be replying to another thread
altogether)

criminals world wide get their guns whenever they want, of course. but i
wasn't referring to criminals...

>should even waste my time before doing so. THANKS!!!!
Unless you live way out in the booines, and have NO transmitters near (withen
20 miles) a broadband preamp will almost certainly only cause problems.
A better solution might be to go to a gain antenna, with a rotator to aim it
at different locations. If you want to get the best from a preamp, you need to
mount it close to the antenna. I do some NOAA APT reception and use a TUNNED
preamp mounted at the antenna. Hams interested in weak signal
(astelitte/EME/metor scatter etc) often use TUNNED preamps, in conjunction
with good antenns to hear fantasticly weak signals.
But, in general, a broadband preamp is a nightmare when coupled to a scanner.
Good luck.

4314. Trunk + Mil-Air in a HH?

Newsgroup: rec.radio.scanner
Date: 2001-05-27 03:34:01 UTC
From: Insomnia <spikelee7@hotmail.com>
Message-ID: <v6t0ht0ocuijoh6q02rsc7o0lig8f4n71t@4ax.com>
Source record: 65004

Hello gang,

I have been holding on to my Pro-43 HH Scanner only because it has the ability to receive the Mil-Air band. This band is of interest to me because we have an airforce base in my back yard. Does anyone know why Uniden hasn't been smart enough to include this feature in their new HH Trunk Tracking scanners? I've got the BC-895 and it can receive Mil-Air, but I want these features in a hand held.

If anyone knows of an HH scanner that CAN do this, I'd appreciate some input. I don't think my BC-245 can be modified for this.

Tnx
Scott

Message-ID: <GZ8Q6.78949$Pp1.21235941@typhoon.southeast.rr.com>
Source record: 65015

My PRO-91 is experiencing an unusual problem. When in trunking mode, the talk group number showing is not the true number in a few cases. I monitor the Charlotte, NC Motorola II system. Most of the talk groups are correctly reading out. Maybe 10% are showing wrong - in all cases three digits too high. For example, group 8912 reads out as 8915. In scan mode, it does not stop on 8912 when it is in use since it receives it as 8915. The large majority reads correctly such as 6448 reads as 6448. In the above example all my other scanners do read correctly as 8912 so it is not a system change. Any ones have any ideas what is going on?

I looked at the Pro-94 and it doesn't do the UHF Mil-Air band. It
does provide coverage for 216-225 Mhz, but the Mil-Air band is in the
225 to 400Mhz region. That 216-225 covers mainly the VHF-Hi 220 Ham
band.

Thanks for the info anyway.

Neither do we. It takes about 15 minutes to buy a gun - fill out the paperwork, gun dealer swipes your DL to check your background for felon status, pay for the gun, out the door.

RE, I think I have been ripped of over a radio swap.
Snip
>>>>>>>>>>>>>
If the guy won't answer your e-mails or airmail letters. then it looks as if you HAVE been ripped-off, And if the guy said he posted the radio, then your stuffed. Always get the phone number first and then phone to check, at least if the guy is willing to give his phone number it normally means he's OK.
>>>>>>>>>>

Sure does look like you've been taken for a ride, some say to report it to the post office as mail-fraud, but I tried that before and got no-where. Proof is VERY difficult to obtain, not enough to warrant a court case anyway. Also the authorities are reluctant to pursue any international/worldwide claims. If its not within the same country they simply don't bother. If they say they have posted it, then its just your word against theirs, even proof of the posting of your equipment will not stand up in court if the person states he has not received it.
I lost an Pro-2006 and a Sangean ATS-818 on 2 seperate occasions, still, we live and learn.

That's what's sorely lacking today in individuals, common sense. It's the reason there and so many stupid laws on the books: people abuse the freedoms we have and then lawmakers make laws taking them away because of the few.

Sorry but the PRO-94 does not include Mil-Air. I have 2 of these, they are EXCELLENT Trunking scanners however they lack the Mil-Air band (they do have the Civil Air band).

I'm in the same boat as Scott, I would love to find a good HH with both as I live in Florida within receiving range of both the Space Center and Patrick AFB plus several bombing ranges. You could say I'm in a target rich (Mil-Air) enviroment.

I love my PRO-2006 & PRO-2035 for Mil Air and PRO-26 for a HH Mil Air but would like to not have to carry two scanners in the car.
Thanks,
George

According to the RS catalog (on page 101), the PRO-94 includes
"Extended Coverage", and refers you to page 99. And on page 99, it
states "Extended Coverage" includes the "225-406MHZ military aircraft
band"!

You may want to download the manual from www.radioshack.com and check
for coverage and birdies. Or, check it out in a RS store.

Looks like the RS catalog is WRONG!

According to the RS Manual for the PRO-94, there is no coverage of the
225-406MHz Mil Air Band.

Sorry.

Been licensed since '83 and wanted to go pretty badly in years past. Thanks for the heads up on the over-priced used equipment; it's the same here in NJ at the local hamfests. People are looking to get list price for their used equipment! No good deals as there was years ago.

Roland

I have suspected this for a long time, even the local hamfests are like that. All the used equipment people are selling is way over-priced. No deals like in years past.

The 2 programs that are cream of the crop are TrunkStar 780 and Winscan 780. Winscan emulates the front faceplate and looks nice, has a neat Control Channel search to log the freqs and Talk groups by # of hits but my big let down on Winscan was the fact that it is a CPU hog and chews up CPU time to 100%, which causes the mouse and other screens to jitter, spit and sput. I opted to go with TrunkStar 780 since not only was it cheaper and did not grind the CPU to a halt, but it also has much better tech support from Sam Dunham who wrote the program. He has an e-Group on Yahoo and can communicate directly with him. The folks at Scanner Master/Winscan are not as approachable and do not respond when you leave them mail.

No, I use it on a 245XLT. But the Watson should work well on a small radio like the R2. It's smaller and lighter than others like the Radio Shack telescoping antenna, etc.

Sure. Once the government has a record of all your firearms purchases, what's the worry? As soon as they feel the need, they'll know right where to go to confiscate them.

The price is 99.00US per radio includes delivery
new batterypacks, new beltclips, newrubberduck antennas,
35.00US alone for batterypacks, $9.00 for antennas $4 for beltclips. these
radios where well taken care of, no scuff marks
and they work very good distance wise.

WHAT A DEAL???

Because of Canadian policies (and culture), it generally cost
Canadian criminals alot more to purchase illegal handguns than it
does for their American counterparts. In addition, most illegal
handguns are smuggled into Canada from the States. If the States
adopted more restrictive policies, then not only would it be more
difficult for American criminals to obtain illegal handguns, it
would also dry up the supply for Canadian criminals.

i don't know about the rest of canada, but in ontario, you have a background check done by the opp (ontario provincial police). and it's a background check where they actually go around talking to people who know/knew you along with all the criminal searches, etc.

but that's only for getting a firearms license...after that you present your card when buying a firearm (and now ammunition) and you're done...

i dont' know what it's like down there, but in canada, you have to do
something wrong (ie. criminally), and it generally has to involve a firearm
before they go conficscating firearms...

i've never heard of the guvment just rounding up a heap of guns from my
neighbor for no reason :)

i'm pretty sure the record of firearms is used in case their stolen...

I have used the W-889 on my IC-R2, by way of the SMA-BNC connector. I works fine, but (and it's a big but!) it makes the radio pretty unwieldy to handle. I attached the antenna to the radio and left it firmly planted on my desk.

Michael...with all due respect, if the firearms are being smuggled
into Canada, what will changing policies reflect? The activity is
already illegal. Making it MORE illegal, or more difficult won't
stop it, or even slow it down. Smuggling is done by people convinced
that they can't be caught. The only thing more restrictive policy
can do, is effect those that abide by the law. By definition
smuggler's don't qualify. So the flow continues.

I not that new to scanning, but I can only get the BC60XLT-1 in my area. bummer... I have two questions.

1st. Is it possible to tweak the BC60XLT-1 to receive more band ranges?
2nd.I need a scanner site that covers Wayne County New York. Not just simple coverage but very detailed coverage of the area. If you know of a site that has highly detailed scanner freq. listings.

please contact me at the_manic_mouse@yahoo.com with any help.

Or better yet, we could kill everybody and then we wouldn't have any criminals. Love that logic. Ban, restrict, govern, legislate, control, regulate, etc...all the inanimate objects you want, if you aren't addressing the real issue (humans) then you aren't making any difference regarding the problem. Any crime that you can name was committed long before guns were invented and will be committed long after we replace guns with the next weapon. Government cannot control human thoughts, intention, or actions - only the individual can take personal responsibility for their own actions.

> History has a way of repeating itself...

Yeah, like it repeated itself in England and Australia (and Kalifornia),
where the government has "rounded up a heap of guns" from law abiding
citizens for no reason other than the government deemed the guns unnecessary
for private ownership. But don't take my word for it, wait until they come
to your door. I'm the paranoid one right up until the minute you lose your
rights - then I suddenly make sense.

"If a nation expects to be ignorant and free, in a state of civilization, it
expects what never was and never will be."
---Thomas Jefferson, 1816.

"They that can give up essential liberty to obtain a little temporary safety
deserve neither liberty nor safety."
---Benjamin Franklin, Historical Review of Pennsylvania, 1759.

Has this happened from day one or is it a recent occurance?

Do you know FOR SURE it is a Type II system? If not, it could be another
system and the incorrect fleetmap is set. OR if it IS a type II system,
you could have accidentally set a fleetmap when nine is required. If all
else fails, you may need to reset the scanner and start over from scratch
to see if that helps.... I know I had to do it when I first got my unit.

Hmm, you might wanna' move that stuff to another bank on your scanner and see what happens. Also, make sure you have the system type set correctly.

They're in the 2.4 GHz freq range. :-)

And it is highly possible one brand of TX will work with another brand of RX
if the freq is identical. The principal is the same as listening to
different brands of TX devices with one brand of scanner.

We're way off-topic here, so I might as well throw this in. It's taken from a email I received regarding the difference between those who voted for Bush and those (fools) who voted for Gore.

>And an even more remarkable finding....
>
>Average Murder per 100,000 residents in counties won
>by Bush: 0.1
>Average Murder per 100,000 residents in counties won
>by Gore: 13.2
>
>Researchers found one more interesting fact that might
>help explain these disparate murder rates. Gun
>ownership in the counties won by Mr. Bush is much
>higher than in the counties won by Mr. Gore.

And as for the comment made elsewhere that criminals have to pay more for hot guns in Canada than they do in the U.S.A., might that have something to do with the loss of value of the Canadian Dollar? Seems like back in the Sixties it was almost 1 to 1, Canadian to U.S., now it looks like the Can. dollar is only worth 2/3 of a U.S. dollar. If the Canadian dollar has lost roughly 30% of it's value compared to the U.S. dollar, what does that say about the policies of the Canadian government? Don't get me wrong, I like Canada, but don't go waving your scanner laws in my face and tell me how superior your country is to mine as a result.

Mark

You can purchase any scanner you want via mail order. Are you saying
there is no Radio Shack store in your area? Impossible! :-)

If you can't find the frequencies on the net, purchase a copy of
Police Call, mail order or Radio Shack.

From: Ed Ortiz <eortiz@cmix.net>
Message-ID: <th510t41hcin61@corp.supernews.com>
Source record: 64927

Was wondering if there are any other mods for the Pro-2045 other than the discr tap. I was looking at getting a trunk scanner (the 2045 is not) and I stomped at the OS535 made by optoelectronics which will give computer aid scanning capabilities to the pro-2035 & pro-2042,

Is there such a thing for the pro-2045? I know that I can probably built a generic data slicer from plans on other sites but I have never tried it on this model.

By the same token, is there any device that added to the unit will give trunk capabilities or should I resort to my original plan of buying a trunk scanner?

Thanks in advance for your help guys and keep the good work!

Surely a quick glance at a service manual should reveal the model select jumpers and thus give a route to unblocking a US scanner.

In the UK we frequently use this method to expand UK spec radios to other country specs e.g. Lincoln from 10m to full 26-30MHz or Kenwood TH28 airband re-enable

Good luck

Alec M1BNK

PS a visit to ham mod sites might be in order

Scanners sold in the US must be "unblockable". They must be made so
that no changes which would enable one to receive the cell bands can
be made without destroying the radio. Stupid, but that's the way it
is. In the "World Class" versions, such jumpers, either in hardware
or software, may exist.

No such jumpers exist, at least not the traditional I/O pull-up or pull-down pins. The service manual does reveal, however, that the US version has a different CPU part number than the international version. Undoubtedly the US version firmware makes unblocking essentially impossible without a priori knowledge of the code. I have also experimented with the "USER PORT" pins without success. I think Yaesu was quite serious about permanently blocking the US version. The only mod I've ever seen for this unit (removal of a surface mount resistor underneath the battery compartment) no longer applies, and may have only applied to the international version in the first place. It's a real shame, too, since they also block the "legal" image frequencies leaving Swiss cheese in the UHF Hi bands.

I had a pro-92 for the Redding, CA area. I got it figured out after a week or so (and some newsgroup help). DO NOT lock out the control channel (one thing I did wrong). You must input the size codes and block information in the scanner FIRST (before programming any trunked frequencies and/or User I's (another error I did). I got the unit to properly trunk and scan conventional at the same time. Problem: reception for the pro-92 (at least in my area) was terrible. My pro-90/91 still work better as far as reception. I returned the pro-92.

4408. Someone here HATES eBay "FA" Threads

Newsgroup: rec.radio.scanner
Date: 2001-05-29 00:37:52 UTC
From: dconti2@bellatlantic.net
Message-ID: <3b12ebc1.8300024@news5.bellatlantic.net>
Source record: 64945
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

Unfortunately, I must report that some miserable excuse for a human being, someone so pathetic, so uhappy with him/herself, that he/she waits for someone to post "FA" threads on alt.radio.scanner, rec.radio.scanner, and rec.radio.swap, and then reports that person to eBay "Safeharbor" for SPAM, and other alleged violations.

Of course, this putrid piece of garbage hides behind his/her anonymity, and eBay will not reveal the identity of the complainant.

This has happened to me numerous times now, and to others here as well from what I've read, and yes, the debate as to whether "FA" postings are OK has been beaten to a pulp.

This is simply to warn those thinking of making a "FA" post that the newsgroup SECRET POLICE are alive and well, and you will be reported to eBay, and eBay MAY take action against you up to and including termination of your eBay privelages.

To quote my favorite radio talk show host Bob Grant...

"It's sick out there and getting sicker!"

Programming for trunking is a LOT easier using the software rather
than programming the scanner directly. Makes the software well worth
the $70 they charge for it.

However, I have successfully programmed/reprogrammed the fleet info
and trunking type information after the frequencies were programmed.
So I don't think that "You must input the size codes and block
information in the scanner FIRST (before programming any trunked
frequencies and/or User I's (another error I did)." is a correct
statement, even though it does say that in the manual.

I had an action cancelled on ebay once two. Some times it a commetitor on ebay selling the same product that reports you for selling something such as a cellular capable scanner but most of the time ebay found the auction themselves. Ebay does have people looking through ebay for infringments on there rules.

One time they decieded they were not allowing banners of a certain size in auctions and I was given a warning by a rep but my auction was not cancelled.

I understaind your anger about this though...I fliped out to when they cancelled my auction

Dan, this is an exert from net etiquette on this news group, the web page address is http://www.faqs.org/faqs/radio/swap-guide/

What is appropriate to post in rec.radio.swap?

Any offer to buy or sell radio and electronics equipment, such as transmitters, receivers, antennas, electronics parts, and radio-related computer equipment is appropriate for this forum. Posts concerning non-hardware (but still radio-related) items such as documentation manuals, books, radio-related software, and publications, are also welcome. Sirens and emergency lights would surely find a more appropriate audience in one of the public safety newsgroups.

It has become common practice to append "FS" ("For Sale"), "WTB" ("Want To Buy"), or "WTT" ("Want To Trade") to the subject line of an ad. With the new online auction service, eBay, we ask that you include "FA" ("For Auction") and also "eBay" to your subject line if you choose to place an auction notice. (Note that a recent straw poll revealed that many

readers are not happy seeing auction notices on r.r.swap - post such notices at your own risk! If you fail to append "FA" and "eBay" in your subject line, you will surely be flamed.)

This clearly states that FA: postings are acceptable here, if ebay contacts you for spamming here direct them to this site for confirmation that FA: is allowed.

Mike

My auction was NOT cancelled. I received one of those useless
"warning" notices from Safeharbor stating that I had been "reported"
Yikes, reminds me of when I was in grade school and someone SQUEELED
on me to the Principal. Sheeesh, I do hate a Rat.

AND, as far as I know, and based on all the discourse here on the
groups regarding this matter, I AM NOT in violation of ANY
Usenet/Newsgroup rule by posting a "FA" for an eBay auction.

If I am, I would LOVE to see it in black and white, either from a
groups, or from eBay. I doubt I will.

Mike,

Thanks for the heads up on the site. I would send it to eBay, but it
does NO GOOD. The last time they received a complaint about a
NEWSGROUP post, they continued to insist that I had in fact sent SPAM
e-mail to this complainant.

Also, I ALWAYS use FA when posting an eBay auction link, and in the
future will also add EBAY to the header as well.

SO, to the BOOB who is a whniy little RAT, be advised. I and
hopefully others here will CONTINUE to post FA threads, and you can
cry to eBay all you like. Learn to use your filter, you JERK!

Actually if I remember correctly, eBay(tm) even suggests you post your item in the approate newsgroups! That is how eBay(tm) become so large in the beginning, by tell all the sellers to POST POST POST to all the newsgroups.

If you look in the help files on eBay(tm) I think you'll still find that in there.

Thanks
George

I too have had a similar experience when I posted the last two items I auctioned on ebay. The posts were clearly labeled "FA:" with an accurate description of the item and the ebay link. One item which was reported as "spam" also sparked a debate intoning I was getting too much money for it! What part of auction don't they understand. Nobody grabs their mouse and makes them go to ebay and place a bid. They can simply ignore "FA:" listing or filter them. They are undoubtedly motivated by the fact the their ability to get a bargain on the newsgroup, sometimes for pennies on the dollar, has been undermined by ebay. They should move to a communist country if they deplore capitalism.

I have a desktop Uniden Bearcat 855XLT scanner for sale. This
scanner originally had 50 channels but was modified and now holds 100.
The scanner was also modified to recieve cellular band. Also recieves
all the usual personal scanner freq. Comes with original accessories.
The scanner is 12V and can be used in a car (inexpensive cigaret lighter

adapter is needed but could be purchased from Radio Shack for
under $10). The scanner is in very good condition. I will sell it to the

best offer please email me at vze28f4n@verizon.net with offers or
questions. Pictures available on request.

From: mike <mikekut@earthlink.com>
Message-ID: <3B1306FD.92283685@earthlink.com>
Source record: 64809

How can one tell the difference between a 94 and 94A. Is there any identifying feature on the scanner itself? The RS web site lists only "PRO 94" with the old catalog # (20-524) in their catalog section but they have the 94A manual in the support section listed as catalog # 20-524A but on the cover page it just says "PRO 94" (the old 94 manual is also listed). Sooooooooo, if I find a scanner that says PRO 94 on it, how can I tell if it is a PRO 94A?

Thanks,
Mike

Hi Mike!

I'm not sure what the difference is, but you can tell if it's a newer "A" version, if you look on the back of the scanner itself. Look for the silver, and black Mylar label, and the catalog number 20-524[A].

Exterior TV antennas have 2 (or 3) sets of elements to separately
cover the VHF and UHF bands. Military air falls in the large gap between
them. Additionally, TV antennas are horizontally polarized and directional
- attributes not wanted for mil air reception.

From the FAF - Frequently Asked Frequencies

because it's so consistant on complaining to ebay, I think it could be a bot, rather than a real person. There are known bots that look for keyphrases in spam and report it. I am noting that many of the FA: posts are crossposted to other non .swap or .marketplace groups so the bots are probaby picking you up from there.

I guess he's too stupid to learn to use his newsreader. A simple filter, deleting all headers containing "FA", would fix the problem, but he chooses to whine and complain and attempt to regulate others rather than simply solve the problem himself.

ACiesynski's statement doesnt even make sense.

First he says he is sick of people posting auction anouncements on
newsgroups. Than he says why dont they just sell it to someone who frequents
the newsgroup. Well ACiesynski isnt that what they are trying to do?

4433. How bad is 100Hz?

Newsgroup: rec.radio.scanner
Date: 2001-05-29 04:40:27 UTC
From: (unknown)
Message-ID: <3b128d6e.7871125@news.pix.za>
Source record: 64821

I bought a new Icom R8500 recently. After using for a while I realised that it was reading 100Hz high on hf. In other words BBC 6.190 zero beats on 6.190.1
After being on for 10 hours it's rock steady and 100Hz off. The same for all the major broadcasters (VOA, BBC, etc.). My AOR 7030 is on the spot every time.
Is this acceptable in a new radio at this price or am I being too demanding?
The specifications say that its stability is +and - 100Hz. Is there a difference between stability and accuracy? I understand stability to mean that it may drift by this amount on reaching "steady state" but that its accuracy should be much better than that.

I've been on both sides of this. Both as a member of the media and now as the administrator of our local public safety radio system. I really don't have a problem with the media being able to monitor and respond to a situation. But...they must do it with restraint. They need to carefully consider how they use the information. If they do something stupid, and some do, they will have to pay the consequences. I am a strong believer in the first amendment, but all of us need to remember that a person's rights end where another's begin.

From: Skweezieweezie <noway@thistime.now>
Message-ID: <HrIQ6.584$Z52.338164@news1.epix.net>
Source record: 64825

Which 2026 do you have? There were 3 different
models. The A and B versions have a removable
power jack and can be run from a plug-in 12vDC 1000mA
adapter available from the ShaK for about $15. Pick
plug "M" and set it to "tip positive"

have
> to pay the consequences. I am a strong believer in the first amendment,
but all
> of us need to remember that a person's rights end where another's begin.
>
Who set u up as some "thought-police, via scanner listen" as to what
will be known to
others or not?
"....they will have to pay the consequences."

so, the media has to respond with "authority-in-charge" pre-ordained
steps. To be adhered
to no matter the stupidity of whoever is in charge emitting orders for the
media to obey. Like,
"press cannot interview witnesses" until we say it's ok to. How special.
or "media cannot be within 100 yards of a police-incident"....How
special.
or "media must have their tape reviewed prior to leaving the incident
scene and must be
found "appropriately good" on what they bring out. How special...a
concocted war zone no
matter the event.

it can go on more, but you get the drift. Cops are morons when the
press shows up. They get
all bent out of shape because they think the Press will find out too much
too fast and not want it
presented on news airings. Cops go bananananas upon the Press being on scene.
The cops seem to
think that every little piece of earth within 10 miles of the incident is a
crime scene and all orders
to leave must be obeyed, just because. Lately they have even told tv
station choppers to leave the
area for it being a crime scene over the incident and that really goes to

prop up your position. The
rights of the criminal not be seen overhead as he/she shoots at cops. Or
the chopper.

"pay the consequences..." is ripe. typical COP-think. Bully boys in
drag.

what be those consequences you conjur up in your way of absoluteness?
Give is a thrill. Let the
PRess know what you think they will create for themselves if they cross
your "invisible line?"

I guess from now on the news will be cops preventing the PRESS from
access and all the mayhem and
slaughter involved in so doing.

Frequency 472.0875 is in the UHF T-Band. The last time I looked any
T-Band operation in the Sacramento area is illegal especially for the IB
frequencies. There's plenty of IB freqs that can be used in Sacramento.

The details were easy to find on the Net:

http://www.leg.state.fl.us/session/index.cfm?Mode=Bills&SubMenu=1&BI_Mode=ViewBillInfo&BillNum=1762&Year=2001&Chamber=Senate

I do not live in Florida so know nothing more. However, as of May 11, people are reporting that "Florida failed to ratify bill 1762, which would have withheld technical information about trunking systems and MDTs from the public..."

Doesn't sound like it passed.

if any kind of encryption breaking would be allowed. it would either come to Canada or Europe first. since Industry Canada. FCC in the states. IC askes peoples opinions here. Then they either ban something or not. say those cell jammers for instance. it is being decided on right now if we are allowed them or not. They are asking the public for opinions right now. and so on. True free speech is in canada. not the US. no offence.

new law in BC is sorta different then ontario. you have the new gun law. You have to take a test, sorta like ham radio. if you pass you get your permit, if you fail. Oh well. Too many problems with teens shooting others in the head here in BC lately. Get a life though. Guns are stupid. We all lose someone due to them. They are a great hobby. But others use and abuse them. killing others or loved ones. We are talking about scanners though. We have the true Free Speech on scanners.

lol. ya sorta liek a bug. or a wireless mic. They get more funny on boring days then cordless would ever be. they say such the strangest things around them. or even ..... anyways. once you move to a small area like I did. you don't have anyone to worry about. no one around you for miles. I don't care. if some fellow canadian wants to get off hearing the baby monitor. go happy. If they want to get off thinking I am cybering, when I am actually talking about a cold beer. go happy. Just remember. if they listen to you. You usually have once or twice heard them. so it is even.

all depends. I use my pcr-100 as a trucked scanner right now. but you can use a CE circuit instead of the OS535 one. it will control the 2045 fine. There are many un documented things when you use the reset command. of 2, and 9 and power. if you use 2 and 9 and some other button. others things happen. there is something else I am trying right now with it. all it has to do with is programming and the headphone jack.

It was defeated, Strong Signals did a write up about it a few weeks back.

Glad it was, but we need to keep abreast of these possible obstructions to Scanning as they crop up and contact our Reps. in the State and US Congress to let them know that we want to be able to Scan.

Understanding the need for some Police Communications to remain private we also should be afforded the opportunity to Scan non-classified Coms.

With available Technology private information can be encoded, as here in Palm Beach; the Sheriff's OCB (Narcotics/Vice) will talk in the clear but when on a Case, they will use a form of Encoding to keep Coms. more secure.

A ballance that has worked out quite well here and I am sure in other places.

They don't even know how to vote properly.
I think they should wait until passing this law, until someone
gives them some wake-up pills or geritol or whatever it takes for them
to not be stupid.

It't JUST a minor adjustment to fix it, but new radios are known to
sometimes be high/low a little and then drift with age to pretty
damn close to perfect. See how far it's off after a couple of weeks
at 5.0 10.0 MHZ (WWV) and go from there.

I wouldn't waste my time with this UNLESS you use a very long
transmission line from your antenna and you're looking to overcome the
loss in the line. Even then, I don't recommend it unless you live in
such a rural area that even cordless telephones are rare.

The problem with your scanner isn't sensitivity. The sensitivity of
most scanners is usually good. The problem is dynamic range. This is
how well your scanner will handle weak signals in the presence of
strong signals.

A scanner isn't too good at this to begin with. One tradeoff for
getting a scanner that will tune anything is having less dynamic
range. In other words, your receiver will get so much signal in it
that it will generate spurious signals that don't exist, or in extreme
cases, block out signals altogether.

Placing a preamp ahead of your scanner is not usually worth doing
unless the pre-amp is at the antenna and the coax leading in to the
scanner is something long and cheap (such as using over 100' of RG-58
at 900 MHz). Even then, the money spent on a pre-amp is better spent
on new coax. Putting a pre-amp on the line is like trying to polish a
turd. No matter what you do, it's still a turd.

I don't know the specifics of your radio, but most of the ones I've
seen are adjustable so that they can zero beat to radio station WWV
(which broadcasts on exactly 5 MHz, exactly 10 MHz, and exactly 15
MHz). You should be able to compensate for this somewhere...

Its Easy Bill.....some Motorola rep. trotted in and made a contact within MSP. They sell them a line of bull about these marvelous digital 800 systems, and they take it in hook, line and sinker !!! There is usually no contact person with any radio savvy, so its easy to schmooze those guys. They mention great mobile coverage, but fail to mention the crappy portable coverage. MSP was also hoping to attract many local depts, looking to share the system with them. Not many takers, when they heard how much the per-mic charge was going to be!!!!!! I live in Garden City and they just went on the new digital 800 system with Westland, Inkster, and Wayne. Dearborn Hts. is about to make the switch to that system soon as well. There are numerous "coverage" complaints already and it will only get worse.

Yea:

We where there again in the same spot as the last 12+
years. Outdoor flea market, I mean Vendor space #3257.
Great deals where to be had all over the Hamvention, inside
and out.

It was pretty WET Friday in the mid 60's, (although it's
expected, hopefully only once during the Hamvention
weekend) and that's the day I got my BEST DAYTON
DEALS (it was like a FLOOD SALE, I Loved it) You can
check some of the out at;
http://www.aamerican.com/ham/dayton2001

Saturday was overcast in the high 60's, a fantastic
day to walk around and snatch up some more GREAT
DEALS, like this CELLWAVE (spelt Celwave) 6 cavity
mobile UHF duplexer, that some on this very N.G. have
attempted to sell for $200+, at Dayton Saturday afternoon
only $40. Check it out at;
http://www.aamerican.com/ham/dayton2001.

Sunday was HOT and Sunny in the 70's; good day to go
inside and snatch up deals on BRAND NEW RADIO equipment.
Those major Radio Dealers where cutting each others throats, and
selling brand new stuff at or below cost. It was F'n incredible. If
your thinking about making a major radio purchase ($1000+),
save your money up for next years 2002' Dayton Hamvention.
I guarantee the money you save on your new radio purchase there,
will cover your entire 3 day Dayton Hamvention expenses, including
food, lodging, and travel cost.

Thanks again to all that stopped by our booths, and
especially to those of you that bought something. I'm sorry
we sold out of those $29.99 PL Encode/Decode boards so
quickly, but don't you worry, we should be getting some
more in, later this week.

Until the next 2002 Hamvention, Rain & or Shine.

Hi all:

Thanks again to every one that stopped by
our sales booth, space #3257, and especially to those
of you that purchased something. I'm sorry we sold
out of those $29.99 Programmable PL Encode/Decode
boards so quickly, but don't you worry, we should be
getting some more in, by this weeks end.

I couldn't believe all the great deals this
year at the hamvention, maybe all that rain on Friday
had something to do with it. And what about those
inside dealers selling BRAND NEW STUFF at or below cost?
Man it was a mad house in their, waiting in a long line to
make a new purchase

You can check out some of my 2001 Dayton Hamvention
deals, including one of those $500 CELLWAVE (spelt Celwave)
black 6 cavity mobile duplexers, that I paid a fair market
value price, of ONLY $40 for at:
http://www.aamerican.com/ham/dayton2001

Until the next 2002 Hamvention, Rain & or Shine.

Same experience here. But I've also noticed that Uniden scanners typically have stereo sound while Realistics (I guess that's what GRE is) have only mono sound.

Try putting on a pair of headphones to listen to each. You'll get audio out of only one ear with Realistics, but will get sound out of both ear pieces with Uniden models. Another way to find out is to use one of those CD-to-cassette adapters that some people use in their cars and let the sound eminate through your vehicle's sound system. Realistics sound like complete crap as a result of this, while Unidens will transmit sound over all of the speakers in the car's audio system.

About programming: to be a bit more specific, I've found that with Realistics, you have to hit the PGM button, enter your freq (and it won't automatically enter the decimal even if you're on a scanner that won't hit the 1GHz+ range), then hit ENTER. I like Unidens because you only have to punch in the freq you want (and it DOES automatically add the decimal after you've punched the first three - unless you've already hit it yourself) and hit the E (Enter) button. With that in mind, the Uniden just seems a lot more user friendly to me.

Yes they are on trunking. Invest in a trunking scanner, it's worth it.
On my non-trunking scanners I here them on the following: 858.3635,
855.9125, 855.8875, 855.6625. You may not be able to follow all
conversations with just these though if they switch during trunking.
A great web site with all the info you need on Mass. State Police,
plus other Mass. stuff is: http://www.scancapecod.net/

I am wondering if anyone here or web sites that have frequencies for this area.

Please reply to author,

Thanks

I would like to build a 1/4th plane antenna for my pro-51 but I would like to get some things clear. What kind of coax should I use? Can I use screw-on connectors? On the antenna, can I make each of the four ground planes difference lengths for different frequencies or does the whole thing have to be tuned to one frequency? Thanks.

Yeh well they are just as intelligent at AOL as they are at EBAY. You should thank them for getting you out of that hell hole.

this is from the rec.radio.swap faq:

It has become common practice to append "FS" ("For Sale"), "WTB" ("Want To Buy"), or "WTT" ("Want To Trade") to the subject line of an ad. With the new online auction service, eBay, we ask that you include "FA" ("For Auction") and also "eBay" to your subject line if you choose to place an auction notice. (Note that a recent straw poll revealed that many readers are not happy seeing auction notices on r.r.swap - post such notices at your own risk! If you fail to append "FA" and "eBay" in your subject line, you will surely be flamed.)

Does any one know if there are any sites that have live CB's online. Now you that scanners online were interesting. I think this might even be better.

I Don't know, Hearing a live cb radio from across country online seems quite interesting

Please reply to the author on this one.

> Ebay does have people looking through ebay for infringments
> on there rules.
>
>
Trust me, they have no one on staff looking for infringements on this stuff...They rely on those like he or she that have screwed with Dan...

Case in point...there is a PRO-26 scanner currently running on ebay with about 12 hours left...In its TITLE description it has the word "cellphones" plain as day...in the item description it also says plain as day "...and it picks up cellphones" ... for whatever reason, the "secret police" either missed this one or have decided not to report this one to ebay...They were probably too busy screwing with other people's stuff...

I hope it finishes out...maybe ignorance (for the seller) is bliss after all

Source record: 64876

We brought a new 7100 from http://www.bander.com

we asked for it to be adjusted for good performance.

It seemed to go very well.

But now on most strong channels the speech is so strong as to be
distorted and unreadable.

Even on the supplied telescopic aerial it is distorting so much as
to be not usable.

We are going to have to return it at OUR COST from NZ

And do not ask me about the complete fiasco on my 9000M3.5 repair.

What a complete cockup and comedy of errors.

I sent it for some repairs and a D9000 discriminator mod.

It came back profoundly deaf.

They sent a replacement RF board that turned out to be non
compatible with my scanner.(PLL ERROR)

The first board they sent traceable by airmail and the 2nd one
they sent cheepo post by slow camel trek.

Yep it has got lost, most likely in deepest Mongolia by now.

Now we have to bear the cost of postage back to Finland.

A really enthusiastic bunch of amateurs that try their best.

The full story is not printable or able to put on a radio programme.

Shit.shit,shit,shit,shit

I am trying to locate the radio channels for the Ouachita NF. I have found 169.675 (PL 100.0) for the Dispatch Net. However, I am wondering if there are Service Net or other channels in use. I also located 415.275 as a Link frequency and 168.650 as Air Guard (Flight Following).

Any information regarding other Ouachita NF frequencies would be greatly appreciated.

Also, is the USFS/BLM Wildland Firefighters Frequency Guide still in production?

Thanks.

Well guys, I use yahoo, ebay and epier auction sites and I defy any of them or anyone else to tell me where-when-or how to sell any of my items. I like Yahoo Auctions - little to no stringent rules and their system works much smoother than ebay. Ebay has grown to the point where they believe they are the only auction site worth using. They need to pull their head from between their rear pockets. I have never posted any of my auctions in this group but I see it's time to let you know what I have "FA". That's just in case you missed them at the auction site.

I have been that route several times. Only one answer to that.
SOUNDBLASTER! Don't waste time trying to fix it cause it ain't gonna happen
man....
Buy an old pc.. even 486's work. Use it as a dedicated box. I have one
that I use for Trunker and Acars exclusively.

Hello All....does anyone have a good, detailed list of commercial/business frequencies for RHODE ISLAND? The scanner directories are lame and are always missing stuff. I have searched as much as time will allow. Someone out there must have a good list! thanks ...bob

Get a turtle beach santacuize.
Best soundcard out there right now under $100.

We've got someone with the handle "channel master" in my area on the cb.
funny as hell to listen to. sometimes called "channel blaster", or even
"anal master".

I'm serious guy, the best, most high quality and feature filled audio card out there right now
under $100 is the Turtle Beach SantaCruz. It doesn't get better than that esp. with it's multi jack
which is excellent because you can use your line input for your TV or whatever else you want
and use the multi jack as a second line input, or you can use it for SPDIF out, or a second microphone
input or use it as a sixth audio output channel. Also the ADC's and DAC's are excellent quality for a PC
soundcard, the drivers are mature and the Crystal Audio chip is the most powerful of all currrent PC Audio Chips
meaning it does the most voices, with 3D audio per voice and uses the least CPU power. It also has a waveblaster
connector on it. You can't go wrong.
Whatever you do, don't waste your time on Aureal chips as they are old and outdated and they went out of business,
sounblaster audio because it sucks and is cheap or Phillips audio chips because they simply aren't established or supported
well in drivers and are pretty lame. As a matter of fact, the phillips chips are relabled ESS SOundcanyon chips who dumped
a bunch of chips and cards but never supported them except for one lame pair of drivers.

Why would you buy a scanner from Finland?
I live in NZ. No problem purchasing in NZ or Australia. You have already lost the few dollars you saved. Will you learn from your experience? I did long ago.

Well, after corresponding with the hardheads at eBay for a week now, it seems like I FINALLY got their attention, and now have them on my side.

I received an e-mail today from a big muckey muck at eBay "Safeharbor" who stated that he agress with ME on this issue, that these complaining parties are apparently just troublemakers, and that as long as I follow proper ettiquette (which I do) and the rules of the newsgroups, (which I do) then they (ebay) have NO problem with anyone making FA postings for eBay auctions.

DID YOU HEAR THAT YOU ASSHOLES SENDING YOUR LITTLE COMPLAINTS TO EBAY?

THEY DON'T CARE!!!! NOTHING WILL HAPPEN. SO, NOW, crawl back in your miserable little holes and DISAPPEAR!

To everyone else, post your FA's to your little heart's delight.

Good work Dan. I suggest you keep a copy to refresh the minds at E-Bay if they forget. I was going to suggest that you use it to refresh the minds of the a**holes on here but that would be waste of time. Thanks again Dan, we all will "profit" from your efforts.

I bought from Bandercom a little while ago, when the $A was worth more. At that time it was a viable proposition, mainly due to pricing. Now, you just wouldn't bother, the postage would cut out any saving you would have made.

For the record, I had no problem with them, other than being a bit slow to dispatch the order.

This is nothing but a hoax. This is an essention Windows file. Read for more info

Be Net savvy! Do not believe everything you read--even in your own e-mail box. An e-mail message is making the rounds that suggests people should delete a vital Windows file to prevent a virus from attacking their PCs on Friday. It's a hoax! If you receive such an e-mail, do NOT delete the file, which is SULFNBK.EXE. This is not a virus waiting to be activated on June 1. Rather, this file helps Windows re-create long file names if they get corrupted. The e-mail message reads: "It was brought to my attention yesterday that a virus is in circulation via e-mail. I looked for it and to my surprise I found it on mine. Please follow the directions and remove it from yours TODAY!!!!!"The message continues to say that the file slips itself into the c:/Windows/Command folder where it remains dormant until Friday when it will suddenly activate and wipe out all files and folders. NOT TRUE! The e-mail message isn't being spread across the Internet by some insidious Microsoft Outlook virus; instead, it's being spread by well-meaning friends who think they're protecting one another. If you've already been tricked by the message and deleted SULFNBK.EXE, use your Windows CD to reinstall another copy. --Cathryn Conroy

but the best soundcard is the less option type card. the best one to use to decode most data. since they don't use lots of data conversions and so on is the 8 bit soundblaster card. that is the only soundcard that will detect even the Transmit ID that every tranceiver has built in. it is just a teeny burst that is not heard by the human ear. every transmitter has that. it is like a finger print

It's used to prefix the subject line in a newsgroup posting, to indicate
"For Auction" Also used:

FS: For Sale
WTB: Wanted To Buy
FT: For Trade

etc.

Yahoo auctions does not get as many bidders though because they require both bidders and seller to register a credit card where as ebay only requires the seller. Of coarse i bet you get less deadbeats there.

Ebay would be great if there were less RULES on what you can and cant auction. It seams like every other auction has been cancelled. It really annoying.

Often these postings are crossposted to non "forsale" groups, and some of these crossposters probably never read most of the groups they are crossposting to. People think that it's "on topic" so they think it's ok to do, but the *type* of posting also makes a difference such as discussion vs for sale. The newsgroups in question do not have ".forsale", ".marketplace", or ".swap" in their names, so I would think that those groups are not for selling stuff, and there are other groups available for the same devices people are selling with ".forsale", ".marketplace", or ".swap" in their names. yet people choose not to use the special "forsale" groups, or at least choose not to stop crossposting, and risk having their ebay accounts terminated.

just my 2 cents on the issue.

FA - for auction
FS - for sale
FT - for trade

sometime there are combos like FS/T which is for sale or trade

Rusty,

Radio Shack still sells the software/cable package. However, it has a new catalog/RSU number, which is 1220-4327.

I purchased a copy less than a month ago. The clerk couldn't find the package under the old catalog/RSU number. When I insisted, he made a phone call and had the info in a couple minutes. Delivery was in 2 days.

Proper etiquette would mean posting your FA's only in rec.radio.swap.

eBay has NEVER cared about "proper etiquette". It's only recently that
they say anything at all to people who post in violation of Usenet rules
and netiquette.

No, I'm not your "rat". I just stop in every week or two to see the 30 or
40 on-topic articles and marvel at the sheer amount of spam.

rec.radio.scanners DOES NOT have its own for sale group. rec.radio.swap
is the closest and one has to wade through ham and commercial ads up the
ying yang to find scanners and accessories.

In the time it has taken every anti-FA person to post a bitch they could
have set up a filter and removed 95% of these enormous earth-shattering
all but impossible to solve problem postings from ever reaching their
delicate eyes and brain that can't help but read EVERY MESSAGE IN EVERY
GROUP they subscribe to. It must really suck to have no control!

my 2.5 cents worth.

How about the rules in Germany and the Occupied Countries against listening to the BBC or other radio stations located in the Allied Powers countries. The discovery of a radio tuned to the BBC often resulted in the immediate arrest and imprisonment of the occupants of the home/apartment/business where the radio was found. No trial, just a (usually one-way) trip to prison or a labor or concentration camp.

When you stop and think about it, there are very few, if any, methods of oppression that weren't used by the Nazis. Many were in fact first devised by the Nazis.

Try these #s for the Angles:

45 degrees
90 degrees
15 degrees
31.75 degrees (special use)

Have for sale, one classic Bearcat 200XLT handheld scanner. This unblocked beauty is in very nice condition and comes from a non-smoking environment. Sale includes one brand new 1650mah NIMH battery pack, ac adapter/charger, stock rubber duck antenna and a telescoping Radio Shack all-band antenna. Asking $125.00, plus actual shipping/insurance charges. I accept money orders or Paypal.

Thanks,

Chris

What should happen is that if a bidder deadbeats, his credit card is charged
after 30 days. Amount of his final bid to the seller + a collection fee for
the auction service.

EXCELLENT, I love that Idea.
I do a lot of selling on eBay and last year had about $20,000 worth of deadbeat
bidders! This year I'll have about the same amount as we'll up to about $8,000
so far!

> law. You have to take a test, sorta like ham radio. if you pass you get
> your permit, if you fail. Oh well.

we're supposed to take a course (i'm not sure if it's 'all day' or not) but you only really have to take the test. a 'self-study' book is available. but anybody who knows anything about firearms will know 90% of what's in the book.

you take the written part of the test, and there's also a practicial. ie. you have to demonstrate that you can handle firearms safely.

all that has a cost, of course. if you DO fail it, you're welcome to book another test. (just like the microsfort cert. program :)

> Get a life though. Guns are stupid. We all lose someone due to them. They
> are a great hobby.

everyone should switch to scanners :)

In article <thcsf3ot79t618@corp.supernews.com>, brradioman@charter.net says...
> I look at it like this....If you post forsale stuff on Ebay you pay a
> FEE...

E-Bay doesn't have any stuff for sale, it is an auction site. Try and follow along okay?

> Well for Ebay listing make the person pay a FEE too post eaby listing
> here

So do you make the check out to USENET or what? Send it in care of general delivery anywhere andyplace? How have you survived this long or do you have a caretaker watching over you?

Have you ever considered a filter......never mind. That would be like rocket science to you.

4559. Stuart FL F-5 ?

I had a typo in the URL this should be correct

Try http://www.theramp.net/shabec/air.htm
for the C.A.R.M.A. air frequency list page.

According to the footnotes in the catalog, the RSU items are only
available by ordering from a store, or by telephone
(1-800-the-shack). Not from the web site.

Strange.

...And if you looked at the charter for the "rec.radio" hierarchy, you will find that although there is no separate group for selling scanners, "rec.radio.swap" is indeed the CORRECT place (per the charter) for offering [radio] scanners for sale. If you find that this is "unwieldly," you're free to petition for a new group such as "rec.radio.scanners.swap" or for an "alt...." hierarchy group.

I agree, but it's amazing that every off topic post and piece of jump
SPAM is tolerated, but the FA posts are not.

It is more about jealousy and dislike of eBay and it's sellers then
anything else.

With the New Zealand Dollar worth so little, it may be worth importing a diamond discone from New Zealand at the moment, 1 dollar US is worth about $2.50 new Zealand (It used to be US$1 ~ NZ$1.80)

Dick smith electronics have a diamond discone for about NZ$200 + postage of about NZ$20 to the US, so less than US$100

Dick Smith are at www.dse.co.nz

Just an idea
